4	Competition theory: its present state	63		
4.1	Introduction	63		
4.2	Questions for assessing recent influential theory			
4.3	Choosing articles to represent current competition theory			
4.4	Forgotten results in 'modern competition theory'			
	Why the Lotka–Volterra and MacArthur models are insufficient			
4.6	Reasons for including resource dynamics			
4.7	Appendix: Problematic features in the focal articles	75		
5	Understanding intraspecific and apparent competition	79		
5.1	Introduction	79		
5.2	Intraspecific competition	80		
	5.2.1 The definition and mechanism of intraspecific			
	competition	81		
	5.2.2 Describing, measuring, and modelling intraspecific			
	competition	82		
	5.2.3 Models of density dependence	86		
	5.2.4 One-consumer-multi-resource systems	93		
5.2	5.2.5 A more mechanistic approach to density dependence	101		
5.3	Apparent competition	101		
6	The negativity, constancy, and continuity of			
	competitive effects	109		
6.1	Introduction	109		
6.2		111		
6.3		122		
6.4		125		
	6.4.1 Effects of nonlinear functional responses on consumer			
	competition in systems with stable equilibria	126		
	6.4.2 Interactions in unstable systems with type II responses	132		
6.5	Interdependence of competitive effects with more consumers	137		
6.6	Other neglected aspects of consumer-resource models	138		
7	Resource use and the strength of			
	interspecific competition	143		
7.1	Theory regarding the strength of competition	143		
	7.1.1 Theory from the early 1970s	144		
	7.1.2 Early questioning of MacArthur's limiting similarity	147		

	7.1.3	Recent and potential future theory on overlap and	
		competition	149
	7.1.4	Continued use of outdated similarity-competition	
		relationships	153
.2	Labor	atory studies of competition	154
.3	Field s	studies of competition	155
	7.3.1	A historical review	156
	7.3.2	An illustrative example: competition between hermit	
		crabs	157
	7.3.3	Current status of field studies of competition	159
.4	Does	competitive neutrality occur?	160
.5	Inters	pecific competition in a food web context	162
.6		betition between species in theory and reality	169
	-		

8		oetition in seasonal environments: oral overlap	171
8.1	Introd	luction	171
	8.1.1	A brief history of work on seasonal competition	172
	8.1.2	Aspects of seasonal variation in competition treated here	174
	8.1.3	Why are the dynamics of seasonal systems important?	175
8.2	A mo	delling framework and a seasonal MacArthur system	176
	8.2.1	General features of the models	176
	8.2.2	Resource lags and mutual invasibility of MacArthur	
		systems	178
	8.2.3	Coexistence in a 2-consumer MacArthur system	184
	8.2.4	How robust and representative is the example?	188
	8.2.5	Coexistence of a seasonal and an aseasonal consumer	189
	8.2.6	A more complete description of seasonal interactions	192
	8.2.7	Seasonality resource conversion efficiency, b	195
	8.2.8	A 3-consumer system with variation in c	197
	8.2.9	A 2-resource system with temporal and non-temporal	
		partitioning	199
8.3	Comp	petition in other 2-consumer-1-resource models	200
	8.3.1	Systems with abiotic resources	201
	8.3.2	Biotic resources with type II functional responses	203
	8.3.3	Abiotic resources with type II functional responses	204
8.4	Discu	ssion	204
9	Relati	ive nonlinearity and seasonality	209
9.1	Introd	luction	209
9.2	Inher	ently unstable consumer-resource interactions	210
9.3		ences in nonlinearity with seasonal resource growth	213
9.4		ences in the nonlinearity of numerical responses	222
