1 Introduction: similarity and categorization	1
<i>Ulrike Hahn and Michael Ramscar</i>	
Similarity and categorization	2
Categorization and similarity	2
The 'what' of similarity and categorization: concepts and categories	4
The 'why' of similarity and categorization	5
The role of similarity in categorization: the structure of this book	6
Other ways to read this book	9
References	10
2 The role of similarity in natural categorization	13
<i>James A. Hampton</i>	
Similarity-based categorization	13
Evidence for similarity in categorization	20
Does categorization depend only on typicality?	21
What role does similarity play?	24
Acknowledgements	26
References	26
3 Induction and inherent similarity	29
<i>T. Mark Ellison</i>	
Introduction	29
Attributes, predicates, and categories	30
Dark matter	31
Stabs into the dark	33
A new approach	34
Topographic mappings	36
Untopographic grue	39
Extrapolation, category transfer, and prototypes	42
Discussion	45
Acknowledgements	48
References	48
4 Categorization by simplicity: a minimum description length approach to unsupervised clustering	51
<i>Emmanuel M. Pothos and Nick Chater</i>	
Introduction	51

Categorization and induction	53
Overview of clustering	55
Clustering by simplicity	58
Artificial data sets	61
Psychological data sets	66
Conclusions and future directions	68
Acknowledgements	69
References	69
<b>5 Categorization versus similarity: the case of container names</b>	<b>73</b>
<i>Steven A. Sloman, Barbara C. Malt, and Arthur Fridman</i>	
Introduction	73
The studies	74
Conclusions	82
Acknowledgements	85
References	85
<b>6 Dissociation between categorization and similarity judgement: differential effect of causal status on feature weights</b>	<b>87</b>
<i>Woo-kyoung Ahn and Martin J. Dennis</i>	
Introduction	87
Previous demonstrations of dissociations between similarity and categorization	89
The causal status hypothesis	90
Study 1: does the causal status effect occur in similarity judgements?	92
Causal status effect in similarity and categorization judgements	94
Methodological accounts of dissociations between categorization and similarity judgements	95
Study 2: dissociations between similarity and categorization (1)	97
Study 3: dissociations between similarity and categorization (2)	99
Methodological accounts reconsidered	100
Study 4: similarity can correlate with categorization	101
Summary of experiments	104
Similarity and categorization	105
Acknowledgements	106
References	106
<b>7 Structural alignment, similarity, and the internal structure of category representations</b>	<b>109</b>
<i>Arthur B. Markman</i>	
Introduction	109
Structural alignment in similarity	109
Studying categorization in the laboratory	117
Conclusions	125
Acknowledgements	125
References	126
<b>8 Issues in case-based reasoning</b>	<b>131</b>
<i>Abraham Rodríguez Rodríguez</i>	
Introduction	131
What is a case?	133

How CBR systems work	134
Similarity	136
Hybrid systems	142
Generic tasks	147
Summary	149
Acknowledgements	150
References	150
<b>9 Background knowledge and models of categorization</b>	<b>155</b>
<i>Evan Heit</i>	
Introduction	155
The integration model	156
Overview of experiments to be analysed	157
Wattenmaker <i>et al.</i> (1986), Experiment 3	158
Pazzani (1991), Experiment 1	160
Barrett <i>et al.</i> (1993)	162
Murphy and Allopenna (1994)	165
General discussion	169
Acknowledgements	174
References	174
Appendix	176
<b>10 Dynamic similarity: a processing perspective on similarity</b>	<b>179</b>
<i>Mark T. Keane, Barry Smyth, and Joseph O'Sullivan</i>	
Introduction	179
Static similarity theories	180
Manifestations of dynamic similarity	181
Dynamic similarity I: comparing event descriptions	182
Dynamic similarity II: swapping history in perceptual patterns	185
Dynamic similarity III: similarity in the future	189
Conclusion	190
References	190
<b>11 The time course of perceptual categorization</b>	<b>193</b>
<i>Thomas J. Palmeri</i>	
Introduction	193
Reasons to investigate the time course of categorization	194
A formal model of categorization: the generalized context model	195
The extended generalized context model	199
The exemplar-based random walk model	204
Summary	219
Acknowledgements	219
References	219
<b>12 Interactions between taxonomic knowledge, categorization, and perception</b>	<b>225</b>
<i>Frédéric Gosselin, Annie Archambault, and Philippe G. Schyns</i>	
Introduction	225
Diagnostic recognition: an overview	227
SLIP: a formal model of task constraints	230
Effects of taxonomy on categorization: basic-level performance	233

Effects of taxonomies on perception	243
General discussion	247
Concluding remarks	250
Acknowledgements	250
References	250
Appendix: a formal implementation of SLIP	254
<b>13 Conclusion: mere similarity?</b>	<b>257</b>
<i>Ulrike Hahn and Michael Ramscar</i>	
Introduction	257
Is similarity too vague to be useful?	260
Is similarity too limited to be useful?	261
Similarity, coherence, and induction	262
Do theories fit the bill?	263
Can similarity serve as an adequate basis for induction?	266
The relationship between theories and similarity	268
Conclusion	269
Acknowledgements	270
References	270
Index	273
