Contributors	xv
Preface	xix
Acknowledgments	xxi

1. Basic concepts of thiol chemistry and biology

Beatriz Alvarez and Gustavo Salinas

1 Thiols in biology	1
2 The thiol group confers unique properties to the amino acid cysteine	2
3 Thiols ionize to thiolates	3
4 Thiolates are excellent nucleophiles	4
5 Thiols can be oxidized	5
6 Redox versatility of thiols	9
7 The thiol-disulfide exchange reaction can be catalyzed by proteins of the thioredoxin superfamily	10
8 The thioredoxin and the glutathione-glutaredoxin systems: Pathways that use the thiol-disulfide exchange reaction as a leitmotiv	12
9 The concentrations of thiols and oxidized derivatives are under kinetic control	13
10 Cys diversity in proteins	15
11 Concluding remarks	16
Acknowledgments	17
References	17

2. Chemical basis of cysteine reactivity and specificity: Acidity and nucleophilicity

Gerardo Ferrer-Sueta

1 Measuring pK_a	21
2 On the "conservation" of pK_a values	26
3 Acidic cysteines and catalytic cysteines, is there a connection?	28
4 What can we learn from the pK_a of a protein cysteine? pH and species distribution	31
5 Nucleophilicity	33
6 Nucleophilic catalysis	37
7 Concluding remarks	51
Acknowledgments	51
References	51

3. Computational functional analysis of cysteine residues in proteins

Stefano M. Marino, Gustavo Salinas, and Vadim N. Gladyshev

1 Introduction	59
2 Computational methods	62
3 Remarks and conclusions	73
References	77

4. Global approaches for protein thiol redox state detection and quantification

Lars I. Leichert

1 Introduction	81
2 The chemistry of thiols	82
3 Exploiting thiol chemistry to detect and quantify oxidative thiol modifications	85
4 Differential thiol labeling in MS-based redox proteomics	85
5 General considerations	88
6 Experimental pitfalls	89
7 What to expect from the results	92
8 How to evaluate and interpret the results	94
9 Conclusions	96
Acknowledgments	96
References	97

5. Thiol oxidation by biologically-relevant reactive species

Ari Zeida and Rafael Radi

1 Introduction	99
2 Biologically relevant thiol oxidants	99
3 One-electron thiol oxidants	101
4 Two-electron thiol oxidants	103
5 Conclusions and perspectives	108
Acknowledgments	108
References	108

6. Thiyl radicals: Formation, properties, and detection

Christian Schöneich

1 Introduction	115
2 Formation	115
3 Properties	122
4 Detection	126
5 Conclusions	127
References	127

7. Detection of the oxidation products of thiols: Disulfides, and sulfenic, sulfinic, and sulfonic acids

Yunlong Shi and Kate S. Carroll

1 Introduction	133
2 Activity-based detection of cysteine modifications	135

3 Indirect profiling of cysteine oxidation	136
4 Reaction-based profiling of cysteine OxiPTMs with chemoselective probes	138
5 Profiling of protein sulfonic acids ($-\text{SO}_3\text{H}$)	147
6 Conclusions and outlook	148
References	149

8. Biochemistry and detection of S-nitrosothiols

Matías N. Möller and Ana Denicola

1 Introduction	153
2 Formation of RSNO	155
3 Other important reactions of RSNO	158
4 Detection of RSNO	160
5 RSNO in physiology	165
6 Concluding remarks	170
Acknowledgments	171
References	171

9. Thiol modification and signaling by biological electrophiles

Francisco J. Schopfer and Dario A. Vitturi

1 Introduction	177
2 Biological electrophiles	180
3 Determinants and modulators of electrophilic signaling	183
4 Summary	190
References	190

10. Thioredoxin and glutathione reductases

Elias S.J. Arnér

1 Thioredoxin reductases and glutathione reductases—The simple picture	197
2 Thioredoxin reductases and glutathione reductases—Redundancy and higher complexity	199
3 Inhibition of thioredoxin reductases for therapeutic purposes	204
4 Concluding remarks—Biological and medical importance of thioredoxin reductases and glutathione reductases	208
Acknowledgments	208
References	209

11. Functional plasticity in the thioredoxin family: FeS-thio- and glutaredoxins

Carsten Berndt, Christina Wilms, Yana Bodnar, Manuela Gellert, and Christopher Horst Lillig

1 Redox signaling and the thioredoxin family of protein redoxins	219
2 FeS-redoxins	223
3 Concluding remarks	232
References	232

12. Glutathione and glutathione-dependent enzymes

Marcel Deponte

1 Glutathione properties, concentrations, and ideologies	241
2 De novo synthesis, regeneration, and degradation of glutathione	243

3 Physiological functions of glutathione	248
4 Conclusion	260
Acknowledgments	261
References	261

13. Thiol- and selenol-based peroxidases: Structure and catalytic properties

Madia Trujillo, Carlos A. Tairum, Marcos Antonio de Oliveira, and Luis E.S. Netto

1 Introduction	277
2 Peroxiredoxins	278
3 Glutathione peroxidases	286
4 Organic hydroperoxide resistance protein (Ohr)/osmotically inducible protein C (OsmC)	292
5 Final remarks	295
Acknowledgments	296
References	296

14. Thiol peroxidase-based redox relays

Deepti Talwar and Tobias P. Dick

1 The conundrum of selective and efficient protein thiol oxidation	307
2 Thiol peroxidase-based redox relays	309
3 The Prx2-STAT3 redox relay paradigm	315
4 Conclusion	318
References	318

15. Compartmentalized disulfide bond formation pathways

Konstantin Weiss, Julia Racho, and Jan Riemer

1 Disulfide bonds	321
2 Principles of disulfide bond formation during oxidative protein folding	322
3 Disulfide bond formation in the ER	328
4 Disulfide bond formation in the IMS	330
5 Reducing pathways in the ER	332
6 Reducing pathways in the IMS	335
7 Conclusions	335
References	336

16. Disulfide bond formation in *Escherichia coli*

Bruno Manta, Emily Lundstedt, Augusto Garcia, James B. Eaglesham, and Mehmet Berkmen

1 Disulfide bond formation and oxidative folding	341
2 The <i>Escherichia coli</i> Dsb system	342
3 Diversity of disulfide bond formation pathways in bacteria	356
4 Engineering <i>Escherichia coli</i> for disulfide bond formation	358
5 Disulfide-bond engineering for protein stability	359
6 Future perspectives for Dsb system research	360
References	361

17. Thiol-based redox probes

Jannik Zimmermann and Bruce Morgan

1 Introduction	373
2 Fundamental principles of genetically encoded redox sensors	373
3 Probes for monitoring small molecule thiols	381
4 Probes for monitoring peroxides	387
5 Probes for other thiol species	390
6 Probes for monitoring redox enzyme activity	391
7 Which probe should I use?	394
8 What remains to be done?	395
References	396
Further reading	403

18. Selenocysteine-containing proteins

Marco Mariotti and Vadim N. Gladyshev

1 Selenocysteine, the 21st amino acid	405
2 The selenocysteine pathway	405
3 Why selenocysteine?	408
4 Families of selenoproteins	411
5 Evolution of selenocysteine	412
6 Concluding remarks	417
Acknowledgments	418
References	418

19. Overview of cysteine metabolism

Sebastián Carballal and Ruma Banerjee

1 Sources of cysteine	423
2 Cysteine catabolism	431
3 Cysteine posttranslational modifications	437
References	441

20. Hydrogen sulfide and persulfides

Ernesto Cuevasanta, Dayana Benchoam, Matías N. Möller, Sebastián Carballal, Ruma Banerjee, and Beatriz Alvarez

1 Hydrogen sulfide and persulfides: Long-lost thiol relatives	451
2 Biological formation of H ₂ S	452
3 Biologically relevant physical and chemical properties of H ₂ S	458
4 In vivo decay of H ₂ S	463
5 H ₂ S quantification methods	465
6 Persulfides as potential transducers of H ₂ S signaling	466
7 Pathways for persulfide formation	468
8 The unique chemistry of persulfides	470
9 Detection of protein persulfides	473
10 Final considerations on H ₂ S signaling	477
References	478

21. The role of thiols in iron–sulfur cluster biogenesis

Tirthankar Bandyopadhyay and Caryn E. Outten

1 Introduction	487
2 A basic blueprint for Fe-S cluster biogenesis	488
3 The GSH-binding transporter Atm1 exports sulfur intermediates for cytosolic Fe-S cluster biogenesis, iron regulation, and tRNA thiolation pathways	493
4 Fe-S cluster biogenesis in the cytosolic/nuclear compartment of eukaryotes	495
5 CGFS Grxs serve as hubs for cytosolic Fe-S cluster trafficking and iron regulation pathways	496
6 Alternative LMW thiols are implicated in Fe-S cluster biogenesis pathways	497
7 Summary and conclusions	499
Acknowledgments	499
References	499

22. Thiol-based redox control in chloroplasts

Linda de Bont, Jean-Pierre Jacquot, and Nicolas Rouhier

1 Introduction	507
2 Control of redox homeostasis in chloroplasts by thiol-based systems	508
3 Redox regulation of the chloroplastic metabolism	518
4 Protein oxidation in response to day-night transition	523
5 Conclusions	524
References	525

23. Sugar-based cysteine thiols recruited for oxidative stress defense and redox regulation

Daria Ezeriņa and Joris Messens

1 Introduction	533
2 Biosynthesis of sugar-based LMW thiols	536
3 Biophysical and biochemical properties of mycothiol and bacillithiol	537
4 Protective roles of BSH and MSH	538
5 Posttranslational modification by sugar-based LMW thiols—The S-thiolomes	545
6 From enzymes to tools: Mrx- and Brx-based biosensors to dynamically visualize MSH/MSSM and BSH/BSSB changes in bacteria	547
7 Conclusion	550
References	550

24. Polyamine-based thiols in pathogens

Marcelo A. Comini

1 Polyamine-based thiols and oddities of nature	555
2 “To adapt or not to adapt?” this was the question for the thiol-redox systems	557
3 Thiol-dependent redox pathways in trypanosomatids	559
4 Monogluthionylspermidine in Proteobacteria	571
5 Concluding remarks	572
Acknowledgments	573
References	573

25. Thiols in blood

Lucía Turell, Matías N. Möller, Florencia Orrico, Lía M. Randall, Martina Steglich, Sebastián Villar, Ana Denicola, and Leonor Thomson

1 Blood	586
2 Blood as a source and a sink of oxidants	587
3 Thiols in blood cells	589
4 Thiols in plasma	599
5 Crosstalk between plasma and blood cell thiols	603
6 Overall picture of thiols in blood	604
References	605

26. A thiol chemistry perspective on redox medicine

Tom E. Forshaw, Allen W. Tsang, and Cristina M. Furdul

1 Endogenous protein and low molecular weight thiols	617
2 Thiols in cellular and organism redox communication	623
3 Thiol therapeutics: Drugs and protein targets	625
4 Analysis of redox modifications at thiols and other sulfur compounds	627
5 Redox systems biology: Bioinformatics and computational approaches	632
References	635

27. Therapeutic applications of low-molecular-weight thiols and selenocompounds

Pablo A. Nogara, Cláudia S. Oliveira, Meire E. Pereira, Marco Bortoli, Laura Orian, Michael Aschner, and João B.T. Rocha

1 Introduction	643
2 Selenium vs sulfur: The chemical point of view	644
3 The limitations of LMW-Se as mimics of Selenoproteins	644
4 Organoselenium molecules: Focus on Ebselen, Ethaselen, and Diphenyl diselenide	647
5 Modulation of KEAP1-NRF2 by Organoselenium molecules	653
6 Therapeutic use of LMW-SH	656
7 Conclusions	665
Acknowledgments	665
References	665

28. Thiol targets in drug development to combat bacterial infections

Verena Nadin Fritsch and Haike Antelmann

1 Introduction	679
2 Thiol targets in the development of antimicrobial compounds	680
3 Conclusion	698
Acknowledgments	699
References	699

Index	713
