About the authors.....	xxiii
Foreword.....	xxv
Preface.....	xxvii
Acknowledgments	xxix
 Chapter 1: Energy resources and utilization.....	 1
1.1 Sources and types of energy resources.....	1
1.1.1 Nonrenewable energy resources	2
1.1.2 Renewable energy resources	4
1.1.3 Energy policies	13
1.1.4 Biofuels	15
1.1.5 Countries with major dependency on nonrenewable energy	26
1.1.6 Emerging technologies.....	27
1.1.7 Future perspective.....	28
References	30
 Chapter 2: Nonrenewable energy resources	 31
2.1 Nonrenewable energy resources.....	31
2.1.1 Coal	31
2.1.2 Petroleum.....	60
2.1.3 Natural gas.....	78
2.1.4 Nuclear power.....	94
References	111
 Chapter 3: Future energy options: an overview.....	 113
3.1 Shale gas.....	113
3.1.1 Origin of shale gas	113
3.1.2 Distinctive properties of shale gas.....	117

3.1.3	History of shale gas	118
3.1.4	Natural reserves of shale gas.....	118
3.1.5	Production and extraction of shale gas.....	120
3.1.6	Shale gas in worldwide basins	124
3.1.7	Estimates of conservative shale gas basins.....	124
3.1.8	Highly dependent countries.....	124
3.1.9	Proper natural gas infrastructure	125
3.1.10	Importance of shale gas	125
3.1.11	Global shale gas reserves	126
3.1.12	Environmental impacts of shale gas	127
3.1.13	Future of shale gas	130
3.2	Offshore wind energy and offshore wind farm.....	130
3.2.1	Offshore wind energy.....	130
3.2.2	Working of wind turbines	131
3.2.3	Types of offshore wind turbines.....	132
3.2.4	Offshore wind farm.....	134
3.2.5	Major components of wind turbines	137
3.2.6	Offshore wind energy resources	139
3.2.7	Commercial offshore wind energy generation.....	139
3.2.8	Transportation of wind generated energy	140
3.2.9	Economics of building and operating offshore wind farms	142
3.2.10	Future energy projects.....	156
3.3	Carbon capture technology	156
3.3.1	Introduction of carbon capture technology	156
3.3.2	Working principle and capturing methods.....	158
3.3.3	Postcombustion processes	159
3.3.4	Precombustion processes.....	159
3.3.5	Oxyfuel combustion.....	160
3.3.6	Carbon dioxide separation technologies	161
3.3.7	Chemical looping combustion.....	162
3.3.8	Membrane separation process	164
3.3.9	Hydrate based separation	164
3.3.10	Cryogenic distillation	165
3.3.11	Transportation of carbon dioxide	166
3.3.12	Storage of carbon dioxide	167
3.3.13	Impacts on environment.....	167
3.3.14	Global scenario	168
	References	169

Chapter 4: Solar thermal energy and photovoltaic systems	171
4.1 Solar thermal energy	171
4.1.1 Concentrated solar thermal systems	172
4.1.2 Integrated solar combined cycle system	178
4.1.3 Combined cycle system.....	178
4.1.4 Combined power plant	179
4.1.5 Solar thermal power systems using concentrated solar energy	181
4.1.6 Solar ponds	181
4.1.7 Energy efficiency in buildings	187
4.1.8 Indirect gain system rules of thumb for thermal storage walls	193
4.1.9 Greenhouse gases—a severe atmospheric constrain	199
4.1.10 Solar furnace.....	199
4.1.11 Solar constant (solar irradiance).....	201
4.1.12 Introduction to solar radiation measurements	206
4.1.13 Solar thermal energy collectors.....	209
4.1.14 Heating during industrial processes.....	214
4.1.15 Selective absorption surfaces	217
4.1.16 Number of covers	218
4.1.17 Thermal radiation law	219
4.1.18 Heat transfer	222
4.1.19 Future of solar based energy systems.....	226
4.2 Solar photovoltaic system	226
4.2.1 Doping	227
4.2.2 Electronic band structure in doped semiconductors.....	230
4.2.3 Semiconductors and doping	230
4.2.4 Energy of photon	233
4.2.5 Fermi energy levels.....	234
4.2.6 Importance of fermi energy levels.....	234
4.2.7 Intrinsic semiconductor	235
4.2.8 Materials of photovoltaic cells	241
4.2.9 Types of cells.....	242
4.2.10 Use of batteries in PV systems.....	243
4.2.11 Standards for SPV	244
4.2.12 Stand-alone systems	245
4.2.13 Solar photovoltaic water pumping system.....	246
4.2.14 Grid-tied solar systems.....	252
4.2.15 Pace-based solar power—the power of the future	255
4.2.16 Nanotechnology in solar cells	256
4.2.17 Recent advancements in solar photovoltaics	260
References	261

Chapter 5: Wind energy and its harnessing systems	263
5.1 Wind energy and wind power	263
5.1.1 History of wind energy	263
5.1.2 Current status of wind energy	263
5.1.3 Modern wind turbines	264
5.1.4 Types of wind turbines.....	265
5.1.5 Horizontal axis wind turbine	267
5.1.6 Vertical axis wind turbine	270
5.1.7 Off-shore wind farm	273
5.1.8 Aerodynamics of wind turbine	273
5.1.9 Energy extraction of a single wind turbine.....	275
5.1.10 Wind speed patterns.....	275
5.1.11 Wind speed distribution	276
5.1.12 Micro-meteorological range: turbulence.....	277
5.1.13 Distribution of wind direction	277
5.1.14 Power curve of a wind turbine	282
5.1.15 Uncertainty in measurement of power curves.....	283
5.1.16 Energy of wind	283
5.1.17 Wind energy regional resource centers.....	289
5.1.18 Resource centers	289
5.1.19 Regulating systems for rotor	290
5.1.20 Modes of wind power generation	291
5.1.21 Parts of a horizontal axis wind turbine generator	292
5.1.22 Advantages of wind power.....	296
5.1.23 Challenges of wind power.....	298
5.1.24 Wind farms	300
5.1.25 Wind resource surveys	301
5.1.26 Energy demand	301
5.1.27 Performance preferences	302
5.1.28 Probable risks in investment	302
5.1.29 Benefits of wind energy	303
5.1.30 Weather stations.....	303
5.1.31 Mathematical model.....	303
5.1.32 Wind energy potential.....	304
5.1.33 Controllable grid interface	306
5.1.34 Testing capabilities	307
5.1.35 Grid connections	307
5.1.36 Reactive power compensation	309
5.1.37 Frequency and power control	310
5.1.38 Wind energy penetration	311

5.1.39	Wind power capacity penetration.....	311
5.1.40	Maximum share of wind power.....	311
5.1.41	Wind speed, power input and annual output of energy.....	312
5.1.42	Levels of controls in wind farm	316
5.1.43	Methods of wind-energy-conversion-system control	317
5.1.44	Competitiveness of wind energy	317
5.1.45	Basic cost of wind energy	318
5.1.46	Economic benefits of wind energy	318
5.1.47	Future of wind energy	320
References		323
Chapter 6: Hydropower energy generating systems		325
6.1	Small hydropower plants	325
6.2	Classification of hydropower plants	328
6.3	Classification of hydraulic turbines.....	329
6.3.1	Reaction turbine.....	331
6.3.2	Axial flow turbines	331
6.3.3	Tube turbine.....	331
6.3.4	Bulb turbine	331
6.3.5	Straflo turbine	331
6.3.6	Impulse turbines.....	331
6.3.7	Pelton turbine.....	331
6.3.8	Turgo turbine	333
6.3.9	Ossberger turbines	334
6.4	Selection of turbine on the basis of specific speed.....	335
6.5	Types of small hydropower schemes	335
6.5.1	Run-of-river scheme	336
6.5.2	Pressure forebay.....	336
6.5.3	Civil works	337
6.6	Components of hydroelectric power plants	338
6.6.1	Reservoir.....	338
6.6.2	Dam	339
6.6.3	Trash rack	339
6.6.4	Forebay	339
6.6.5	Surge tank.....	339
6.6.6	Penstock.....	340
6.6.7	Spillway	340
6.6.8	Power house.....	340
6.6.9	Prime movers of hydro turbines	341
6.6.10	Draft tube.....	341

6.7	Important components of hydroelectric power plants	341
6.7.1	Hydroelectric dams	341
6.7.2	Artificial water reservoir	341
6.7.3	Intake or control gates	342
6.7.4	Penstock and shaft	342
6.7.5	Water turbines.....	342
6.7.6	Hydroelectric generators	343
6.8	Low head and very low head hydro power generation	343
6.9	Working principle of electrical generators	344
6.10	Working theory of induction generator	344
6.11	Self-excited induction generation.....	345
6.12	Applications of induction generators.....	345
6.13	Isolated induction generator.....	346
6.14	Installation of small hydroelectric projects with unique features.....	349
6.14.1	Use of water power to fight the poverty	349
6.14.2	Basics of micro-hydro power	349
6.14.3	Environmental impacts of hydropower.....	350
6.14.4	The power to recharge communities	352
6.14.5	Cost of micro hydropower plant.....	352
6.15	Western yamuna canal hydel Yamunanagar.....	352
6.16	Kakroi micro hydel project	353
6.17	The outlook for the hydropower	353
6.18	Long-term global scenarios for hydropower.....	355
6.19	Future of hydroelectric power projects.....	357
	References	357

Chapter 7: Power generation by ocean energy359

7.1	Tidal energy.....	359
7.1.1	Types of tidal plants.....	359
7.1.2	Barrage tidal plants	360
7.1.3	Tidal range.....	362
7.1.4	Different types of tidal energy systems	365
7.1.5	The main tidal-power utilization technologies.....	366
7.1.6	Waves and tidal energy	367
7.1.7	Operational tidal power plants	368
7.1.8	Tidal power plants (barrage)	368
7.1.9	Tidal power plants (tidal device).....	368
7.1.10	Main turbine type.....	369
7.1.11	Tidal power generation	374
7.1.12	Alternatives of tidal power turbines	374

7.1.13	Fundamental concepts about tides	376
7.1.14	Potential for tidal power.....	376
7.1.15	Wave energy technologies	377
7.1.16	Tidal power technologies	377
7.1.17	Environmental impacts.....	378
7.1.18	Preliminary feasibility study	379
7.1.19	Different tidal power plants	379
7.1.20	Ocean wave energy	387
7.1.21	Methodology for wave power data generation	392
7.1.22	Terms relating waves to water depth.....	394
7.1.23	Development of mathematical model.....	396
7.1.24	Converting wave energy into electricity—wave energy conversion	397
7.1.25	Parameters	404
7.1.26	Wave profile devices.....	404
7.1.27	Orbital motion of waves.....	406
7.1.28	Pelamis wave energy converter.....	407
7.1.29	Oscillating water column—a known wave energy device	407
7.1.30	Wave capture device	408
7.1.31	Ocean waves and oscillating systems	410
7.1.32	Oscillating water column	411
7.1.33	Wave energy test facilities	413
7.1.34	Future trends of wave based energy resources	414
7.2	Ocean thermal energy conversion	415
7.2.1	Working of ocean thermal energy convertors.....	416
7.2.2	Usefulness of ocean thermal energy conversion system	417
7.2.3	Power generation from ocean-thermal-energy-conversion.....	419
7.2.4	Closed cycle.....	419
7.2.5	Benefits and opportunities of ocean-thermal-energy-conversion	424
7.2.6	Ocean-thermal-energy-conversion power plant: operational system	426
7.2.7	Ocean-thermal-energy-conversion power plant: future expectations.....	427
7.2.8	Ocean thermal energy conversion: global perspective.....	428
7.2.9	Global scenario and future perspective	429
	References	430
Chapter 8:	Geothermal energy production	431
8.1	Geothermal energy.....	431
8.2	Three parts of earth's interior	432
8.2.1	Earth's crust.....	432

8.2.2	Earth's mantle.....	433
8.2.3	Earth's core.....	434
8.3	Plate tectonics theory—lithosphere plates of earth.....	435
8.3.1	Plate boundaries.....	436
8.3.2	Power just beneath the feet	436
8.3.3	Risk of quakes	437
8.3.4	Geothermal field	437
8.3.5	Geothermal gradients	437
8.3.6	Geothermal resources.....	438
8.3.7	Hydrothermal resources	439
8.4	Vapor-dominated geothermal plants.....	439
8.4.1	Geo-pressured resource	440
8.4.2	Magma.....	441
8.5	Geothermal power generation	442
8.6	Liquid-dominated geothermal plants	443
8.6.1	Direct steam systems	443
8.6.2	Flash steam systems.....	445
8.6.3	Ground source heat pumps.....	447
8.7	Types of geothermal energy systems	447
8.7.1	Direct use and district heating systems	447
8.7.2	Direct use of geothermal resources	448
8.8	Geothermal technologies.....	451
8.9	Applicability of geothermal energy resources	452
8.10	Detailed insight of lithosphere/geosphere and all relevant processes.....	453
8.10.1	Lithosphere/geosphere.....	453
8.10.2	Rock cycle	455
8.10.3	Geologic time scale.....	457
8.10.4	Concept of uniformitarianism.....	457
8.10.5	Composition of rocks	461
8.10.6	Characteristics of igneous rocks	464
8.10.7	Characteristics of sedimentary rocks	466
8.10.8	Characteristics of metamorphic rocks.....	468
8.10.9	Structure of earth and isostacy	471
8.10.10	Plate tectonics	473
8.10.11	Crustal formation processes	477
8.10.12	Mountain building and evolution	480
8.10.13	Folding and faulting	483
8.10.14	Earthquakes.....	487
8.10.15	Volcanism.....	492
8.10.16	Physiography of the earth's terrestrial surface.....	492

8.10.17	Physiography of ocean basins	495
8.10.18	Models of landform development.....	497
8.10.19	Weathering.....	498
8.10.20	Landform of weathering.....	503
8.10.21	Introduction to soil.....	504
8.10.22	Soil pedogenesis and pedogenic processes	510
8.10.23	Soil classification.....	512
8.10.24	Erosion and deposition.....	516
8.10.25	Hillslope processes and mass movements	520
8.10.26	Stream flow and fluvial processes	524
8.10.27	Fluvial landforms	527
8.10.28	Glaciation.....	530
8.10.29	Glacial processes.....	531
8.10.30	Landforms of glaciation	536
8.10.31	Periglacial processes and landforms	539
8.10.32	Eolian processes and landforms	546
8.10.33	Interaction of lithosphere with other spheres.....	551
8.11	Future of geothermal energy	552
	References	553

Chapter 9: Renewable energy from biomass.....555

9.1	Biomass—renewable energy from plants and animals	555
9.2	Biomass resources and bio-renewable resources	555
9.3	Biofuel.....	558
9.3.1	Ethanol	559
9.3.2	Biodiesel.....	559
9.3.3	Biogas.....	559
9.4	Benefits of anaerobic digestion and biogas	559
9.4.1	Biogas formation.....	560
9.5	Bioenergy conversion technologies	562
9.5.1	Thermal conversion	562
9.5.2	Thermochemical conversion	564
9.5.3	Gasification.....	564
9.5.4	Bio-chemical conversion.....	565
9.5.5	Chemical conversion.....	566
9.6	Biogas technology.....	567
9.6.1	Factors affecting the biogas production.....	569
9.6.2	Biogas plant.....	570
9.6.3	Treatment of human excreta	576

9.6.4	The GE's Jenbacher landfill gas concept	580
9.6.5	Turn liquid waste into energy with anaerobic digestion	580
9.6.6	Sugar and distillery water	582
9.6.7	Alcohol distillery effluent	582
9.7	Black liquor gasification	583
9.8	Black liquor gasifiers and system integration	583
9.9	Biomass cogeneration systems	585
9.9.1	Processing techniques	587
9.9.2	Power transmission	590
9.10	Rice milling	590
9.10.1	Grading and cleaning	590
9.10.2	Milling	590
9.10.3	Technology and technical know how	591
9.11	Ethanol from biomass	591
9.11.1	History of ethanol	592
9.11.2	Preparation of ethanol	593
9.11.3	Global statistics about ethanol	593
9.11.4	Importance of cellulosic ethanol	594
9.12	Production and utilization of biodiesel	594
9.13	Major barriers and challenges	600
9.14	Environmental benefits	601
9.15	Biomass power is carbon neutral	601
9.16	Future of biomass-based energy resources	602
	References	603

Chapter 10: Hydrogen and fuel cells605

10.1	Fuel cell	605
10.2	Working of fuel cells	605
10.3	Design of fuel cells	606
10.4	Basic principles of operation	606
10.5	Working of fuel processors	607
10.6	Hydrogen fuel cell	607
10.7	Direct methanol fuel cell	608
10.8	Different types of fuel cells	609
10.8.1	Alkali fuel cells	609
10.8.2	Molten carbonate fuel cells	609
10.8.3	Phosphoric acid fuel cells	610
10.8.4	Solid oxide fuel cells	610
10.9	Elements of proton exchange membrane fuel cells	612
10.9.1	Working principle	612

10.9.2	Advantages of the fuel cell technology	613
10.10	Types of electrolytes in fuel cells	613
10.10.1	Fuel cell with basic electrolyte.....	613
10.10.2	Fuel cells with an acidic electrolyte	615
10.11	Hydrogen oxygen fuel electrical cell.....	616
10.12	Introduction of hybrid electric vehicles	617
10.13	Polymer electrolyte fuel cells.....	618
10.14	Microbial fuel cell	619
10.14.1	History and evolution of the microbial fuel cells	619
10.14.2	Working of microbial fuel cells	619
10.14.3	Applications for microbial fuel cells	621
10.15	Hydrogen generation.....	622
10.15.1	Efficiency of entire process.....	623
10.15.2	Derivation	624
10.15.3	Free energy changes.....	625
10.15.4	Determination of standard state free energy changes by using gibbs free energy	626
10.15.5	Determination of standard state free energy changes by change in entropy and change in enthalpy.....	626
10.15.6	Using equilibrium constants to determine the standard state free energy changes.....	626
10.15.7	Using cell potentials to determine standard state free energy changes.....	626
10.15.8	Helmholtz free energy.....	627
10.16	Comparison of electrolysis and the fuel cell process.....	628
10.17	Various fuel cell types and their operating characteristics.....	628
10.18	Hydrogen basics.....	631
10.18.1	The emergence of hydrogen based fuel	632
10.18.2	Technological description	632
10.18.3	Untapped potential	632
10.18.4	Production of hydrogen.....	634
10.18.5	Uses and applications of hydrogen.....	635
10.18.6	Working of entire setup.....	635
10.18.7	Thermochemical processes.....	636
10.18.8	Electrolytic processes	636
10.18.9	Biological processes.....	636
10.19	Steam methane reforming	636
10.20	Costs of hydrogen supply.....	639
10.20.1	Hydrogen production cost analysis.....	640
10.20.2	Hydrogen appearance and characteristics	640

10.20.3	Uses and applications of hydrogen	641
10.20.4	Characteristics and safety of hydrogen	641
10.20.5	Hydrogen applications	642
10.20.6	Liquid storage systems	643
10.20.7	Gaseous storage systems	643
10.20.8	Hydrogen basics storage	644
10.20.9	Solid state hydrogen storage	644
10.20.10	Benefits of hydrogen based energy resources	646
10.21	Uses and applications of hydrogen	648
10.21.1	Use of hydrogen in rocket fuels	648
10.21.2	Hydrogen fuel cells produce electricity	648
10.21.3	Hydrogen based motor vehicles	648
10.22	The refuelling challenge	649
10.23	Turbopumps for liquid rocket engines	650
10.24	Engine requirements	651
10.25	Gas generator cycle	651
10.26	Gas hydrates	652
10.26.1	Importance of gas hydrates	653
10.26.2	Occurrence of methane hydrates	654
10.26.3	Gas hydrates: an unconventional resource horizon	654
10.26.4	Global reserves of gas hydrates	654
10.27	Recent advances in fuel cell technology	656
	References	657

Chapter 11: Hybrid energy and transmission systems659

11.1	Hybrid systems of energy	659
11.2	Preference of hybrid energy resources	659
11.2.1	The case for “hybrid” renewable energy systems	659
11.2.2	Loop holes in the energy system	660
11.3	Wind photovoltaic hybrid system	660
11.3.1	Wind diesel hybrid systems	661
11.3.2	Photovoltaic diesel hybrid system	662
11.4	Hybrid electric vehicles	665
11.4.1	Preferred use of electric vehicles	665
11.4.2	A cleaner alternative	665
11.4.3	Cost and savings	666
11.4.4	Domestic energy independence	666
11.5	Hydrogen fuel cell features	667
11.5.1	Differences between fuel cell cars and other electric vehicles	668
11.5.2	Emissions from hybrid and plug-in electric vehicles	668

11.5.3	Electricity sources and emissions	669
11.6	Compare electricity sources and annual vehicle emissions.....	669
11.6.1	National averages.....	669
11.6.2	Direct and well-to-wheel emissions.....	669
11.7	Fuel cell electric vehicles.....	670
11.7.1	Environmental benefits of fuel cell electric vehicles	670
11.7.2	Mode of action of fuel cells	671
11.8	Emerging technologies of hybrid energy systems	671
	References	672

Chapter 12: Energy and global environment673

12.1	Climate change and energy transition	673
12.2	Recent scenarios and pathways toward decarbonization.....	674
12.3	Climate change and energy	675
12.3.1	Climate change	675
12.3.2	Important consequences of climate change	675
12.3.3	Environmental effects	675
12.3.4	Human impacts	675
12.3.5	Energy efficiency and renewable energy	676
12.3.6	Multidisciplinary nature of environmental science	676
12.3.7	Scope of environmental studies.....	677
12.3.8	Multidisciplinary nature of environmental studies.....	677
12.3.9	Importance of environmental studies.....	678
12.3.10	Components of an environment.....	679
12.4	Biogeochemical cycles.....	679
12.4.1	Carbon cycle.....	681
12.4.2	Nitrogen cycle.....	681
12.4.3	Hydrologic (water) cycle.....	683
12.4.4	Phosphorous cycle.....	685
12.4.5	Sulfur cycle.....	686
