<i>Introduction: Toward Sustainable, High-Quality Battery Cell Manufacturing</i>	xxxv
<i>Max Weeber, Julian Grimm, Sabri Baazouzi, Michael Oberle and Kai Peter Birke</i>	
<b>Part I Smart Manufacturing in Battery Cell Manufacturing</b>	<b>1</b>
Chapter 1 Overview of the Battery Manufacturing Process	3
<i>Duygu Karabelli and Michael Oberle</i>	
1. The Rise of Li-Ion Batteries	3
2. Current Status and Challenges for Cell Manufacturing	5
2.1. Electrode manufacturing	6
2.1.1. Slurry mixing, coating and calendaring	7
2.1.2. Slitting and final drying	9
2.2. Cell assembly	10
2.3. Cell finishing	11
2.3.1. Formation	11
2.3.2. Aging	11
2.4. Module and pack assembly	12
2.4.1. LIBELLE	13
2.4.2. Modular battery system EMECTRIC	16
2.5. Electrification in aviation — Status quo	17
2.5.1. Challenges in battery development in aviation applications	18
2.5.2. Flexibility	23

2.5.3. Cell contacting	25
2.5.4. Battery management system	25
2.5.5. Certification	26
2.5.6. Economic efficiency and recycling	27
3. Cost Factors of Battery Manufacturing	27
References	28

Chapter 2	Technologies Enabling Smart Manufacturing	33
	<i>Ozan Yesilyurt, Andreas Schlereth, Sascha Gärtner,</i>	
	<i>Ahmad Issa and Michael Oberle</i>	

1. Introduction	33
2. Definition of Digital Transformation in Manufacturing	34
2.1. Definition of production and manufacturing	34
2.2. Digitalization and automation	34
2.3. Digital transformation in general	35
2.4. Brief overview of digital transformation in battery production	36
3. Technologies and Enablers of Digital Transformation in Production	37
3.1. Cyber physical systems	37
3.2. Cloud computing	38
3.3. Mobile communication standard — 5G	39
3.4. Artificial intelligence	40
3.5. Blockchain	41
3.6. Digital twins	41
3.7. Augmented reality and virtual reality	42
3.8. Robotics and AGVs	42
4. Summary and Outlook	43
References	44

Chapter 3	Current State of Digitalization in Battery Cell Manufacturing	47
	<i>Sascha Gärtner and Michael Oberle</i>	

1. Introduction and Motivation	47
2. Approach	48
2.1. State of research — Analysis of scientific articles	48
2.2. State of manufacturers — Analysis of job ads	50
3. Evaluation and Interpretation	52
4. Conclusion	55
References	56

<b>Part II</b>	<b>Digital Planning in Battery Cell Manufacturing</b>	<b>57</b>
Chapter 4	Digital Planning of Battery Cell Factories <i>Julian Grimm and Max Weeber</i>	59
1.	A Toolbox for Digital Assisted Factory Planning	59
1.1.	Factory planning frameworks and planning participants	61
1.2.	Characteristics and challenges of planning a battery cell factory	64
1.3.	Digital technologies to support factory planning	67
References		72
Chapter 5	Modeling and Simulation in Battery Cell Manufacturing — Concepts and Applications <i>Soumya Singh, Johannes Wanner and Max Weeber</i>	75
1.	Multi-Scale Production Simulation	75
1.1.	Material-level simulation	77
1.2.	Cell-level simulation	79
1.2.1.	Empirical models	80
1.2.2.	Pseudo-two-dimensional model	82
1.2.3.	Single Particle Model (SPM)	83
1.2.4.	Thermal models	84
1.2.5.	Product modeling in manufacturing	84
1.3.	System-level simulation	84
1.4.	Process-level simulation	86
1.5.	Production chain simulation	87
1.5.1.	Failure Mode and Effects Analysis	87
1.5.2.	Cross-Industry Standard Process for Data Mining	88
1.6.	Factory building and technical building service simulation	92
2.	Classification of Modeling and Simulation	93
2.1.	Classification of models	95
2.2.	Simulation approaches in Industry 4.0	101
3.	Multi-Scale Model Coupling and Interfaces	105
3.1.	Product-level multi-scale simulation	105
3.2.	Process-level multi-scale simulation	109
References		112

## Part III Operating Battery Cell Manufacturing Lines with Digital Tools 121

Chapter 6	Concepts for Full Traceability — Establishing the Foundation for Smart Manufacturing within the Framework of the Digital Shadow	123
	<i>Anna Buss, Joachim Peter Doppler, Ira Effenberger, David Ensling, Christoph Haar, Silke Hartleif, Günther Riexinger, Klaus Schöbel, Michael Trierweiler, and Thomas Bauernhansl</i>	
1.	Introduction	124
2.	The Digital Shadow — Theoretical Background	125
2.1.	Theoretical concept, differentiation and adoption	125
2.2.	General architectural overview	126
3.	Challenges in the Context of Lithium-Ion Battery Production	128
3.1.	Traceability system	128
3.2.	Cell-specific traceability of lithium-ion batteries	129
3.3.	Reduction of costs by using traceability systems in lithium-ion battery production	131
4.	Traceability Concept for Battery Production	132
4.1.	Trace objects in battery production	133
4.2.	Identification techniques and morphological analysis	134
5.	Adopting the Digital Shadow for the Concept of Traceability	137
6.	Implementation Concepts of Identification Techniques	141
6.1.	Cluster 1: Slurry mixing	141
6.2.	Cluster 2 & 3: Electrode production — Coating and cutting (coil and sub-coil sections)	142
6.2.1.	Traceability-based data matching	142
6.3.	Cluster 4: Cell assembly	143
6.4.	Cluster 5: Finalization	144
7.	Conclusion	144
	References	145
Chapter 7	Exemplary IT Landscape Enabling the Digitalization of the Battery Cell Assembly Process	149
	<i>Ozan Yesilyurt, Andreas Schlereth, Florian Maier, David Brandt and Michael Oberle</i>	
1.	Introduction	149
2.	Evolution of Production IT System Architectures	150
2.1.	Automation pyramid	150
2.2.	Industry 4.0 service-oriented architecture	152

3. Battery Cell Assembly	153
3.1. Cell assembly in the general battery manufacturing process	153
3.2. ZDB — A laboratory environment for battery manufacturing process	154
3.3. The ZDB battery cell assembly sequence of operations	154
4. Service-Oriented IT System Landscape	155
4.1. Approach	155
4.2. Concept	159
4.3. Implementation	161
4.3.1. Micro-services supporting ZDB operations	162
4.3.2. Communication and hosting of the software services	165
5. Discussion	166
6. Summary and conclusion	167
References	168

Chapter 8	Digitalization Concepts for the Supply Chain Management in Battery Manufacturing	171
	<i>Peter Grüninger, Martina Schiffer, Roman Weiner and Dominik Nemec</i>	

1. Introduction	172
2. General Concept for Supply Chain Management Digitalization	173
2.1. Plan process digitalization	175
2.2. Source process digitalization	176
2.3. Make process digitalization	178
2.4. Deliver process digitalization	179
2.5. Return process digitalization	180
3. Digitalization of Raw Material Quality Control	181
3.1. Conceptual framework	182
3.2. Raw material quality features	183
3.3. Integration of supplier information	184
3.4. Incoming goods inspection and process monitoring	184
3.5. Implementation of offline and inline concepts	185
4. Conclusion	186
References	187

Chapter 9	Evaluation of Visual Assistance System Technologies for Supporting the Information Need of Production Workers	191
	<i>Michael Oberle, Ozan Yesilyurt, Andreas Schlereth, Sascha Gärtner and Florian Maier</i>	

1. Introduction	191
-----------------	-----

2. State of the Art	192
2.1. Production workers in manufacturing	192
2.2. The battery manufacturing process	193
2.3. Review on the support of production workers	194
3. Approach for Evaluating Visual Information Methods	197
3.1. Human-centered design process	197
3.2. Use cases in battery manufacturing	198
3.2.1. Use Case 1 — Material use	198
3.2.2. Use Case 2 — Parameter setup	199
3.2.3. Use Case 3 — System maintenance	199
3.2.4. Use Case 4 — Process monitoring	199
3.3. Usage requirements	200
3.4. Technological solutions	200
3.5. Method for evaluating technological solutions	201
3.5.1. Selection of experts	201
3.5.2. Scoring of weights	202
3.5.3. Scoring of technological alternatives	202
3.5.4. Conducting expert ratings	202
3.5.5. Summarizing the expert ratings	203
3.5.6. Calculation of weighted scores	204
3.5.7. Calculation of total scores and rank	204
4. Results	205
4.1. Execution of expert voting	205
4.2. Interpretation of total scores	207
4.2.1. Use Case 1 — Material use	207
4.2.2. Use Case 2 — Parameter support	208
4.2.3. Use Case 3 — System maintenance	209
4.2.4. Use Case 4 — Process monitoring	210
4.2.5. Comprehensive view	211
5. Conclusion and Outlook	212
References	213

## Chapter 10 Managing Environmental Sustainability of Battery Cell Manufacturing Lines 217

*Martin Reisinger and Michael Oberle*

1. Introduction	217
2. Definitions and Problem Statement	218
3. Situation Analysis in Carbon Accounting in Battery Manufacturing	220
3.1. The relevance of measuring and comparing CO <sub>2</sub> of battery manufacturing systems	220
3.2. Insufficient data availability and unsure data quality for LCA	221

4. Primary Data-Based Carbon Accounting and State of the Art	223
4.1. Integrating primary data from the supply chain	224
4.2. Integrating data at the product level	226
5. Concept for a Sustainability Data Management System as an Enabler for Primary Data-Based LCA	229
6. Life Cycle Energy Label for Battery Cells and Vehicles	233
7. Conclusion	234
References	234

## **Part IV Optimization of Battery Cell Manufacturing Lines with Digital Tools** **241**

Chapter 11 Productivity and Quality Propagation Modeling in Battery Manufacturing	243
<i>Friedrich-Wilhelm Speckmann</i>	

1. Online Data Acquisition — Sensor Integration for Quality Control and Increased Productivity	243
2. Serial Line Battery Production	245
2.1. Sensor networks for battery manufacturing	247
2.2. Quality and failure propagation	248
3. Conclusion	250
References	251

Chapter 12 Method for the Identification of Process Quality Characteristics and Suitable Measurement Systems in Battery Production	253
<i>Andreas Aichele, Anselm Lorenzoni and Jonas Lips</i>	

1. Introduction and Motivation	253
2. Research Issue	255
3. State of the Art	257
3.1. Variables in process–structure–characteristic relationships	257
3.2. Identification and selection of process-relevant variables	258
3.3. Measuring systems	262
3.4. Summary of the state of the art	262
4. Procedure for Establishing Process Quality Characteristics and Suitable Measurement Systems	263
4.1. Identification and selection of influencing variables	264
4.1.1. Identification and specification of product characteristics	264
4.1.2. Identification of process steps	264
4.1.3. Correlation of process steps with product characteristics	265

4.1.4. Evaluation of process chains	265
4.1.5. Determination of the priority of the variables considered in the process steps	267
4.2. Selection of suitable measuring systems	269
4.2.1. Derivation of the requirements for the measuring systems	269
4.2.2. Searching and selection of measuring systems	270
5. Conclusion	271
References	271

Chapter 13	Cross-Process Stabilization and Optimization of Battery Cell Production Through Digital Networking of Process Stations	275
	<i>Pablo Mayer, Michael Oberle and Sascha Gärtner</i>	
1. Introduction		275
2. Li-Ion Cells and Method Development — Theoretical Background		276
2.1. Electrochemical storage systems		276
2.2. Methods of process stabilization and optimization		278
2.3. Machine-to-machine communication		279
3. Method Development		280
3.1. Development of a method for individual processes		282
3.1.1. Phase 1: Ramp-up — Individual process		282
3.1.2. Phase 2: Stabilization — Individual process		283
3.1.3. Phase 3: Optimization — Individual process		284
3.2. Cross-process method		284
3.2.1. Phase 1: Ramp-up — Cross-process		284
3.2.2. Phase 2: Stabilization — Cross-process		285
3.2.3. Phase 3: Optimization — Cross-process		286
4. Process Understanding and System Analysis		287
4.1. System boundaries for method testing		287
4.2. Structuring of the exemplary Li-ion cell production		288
4.3. Analysis and feature identification for PA082 and PA082.1		289
5. Technical Implementation and Modeling of Individual Process		291
5.1. Design of IT and control technology architecture		291
5.2. Data model for process section PA082		292
5.3. Process modeling — Individual process PA082		292
6. Experimental Procedure and Evaluation		293
7. Theoretical Contemplation of Cross-Process Method		295
7.1. Analysis and feature identification for PA090		295
7.2. Process modeling — Cross-method PA090		295
8. Summary and Future Research		297
References		299

Chapter 14	Analyzing and Maximizing Line Productivity — Bottleneck Identification and Predictive Maintenance	301
	<i>Thomas Hilzbrich, Brandon K. Sai and Lennard Sielaff</i>	
1.	Introduction	301
2.	Root Cause Analysis of Downtimes and Performance Losses	304
2.1.	Literature review	305
2.2.	Concept	305
2.3.	Efficient modeling with transfer learning approaches	307
2.4.	Application of bottleneck analysis	308
3.	Predictive Maintenance	310
3.1.	Literature review	310
3.2.	Concept	311
3.3.	Exemplary identification of machines and components for Predictive Maintenance	314
3.4.	Exemplary integration of Predictive Maintenance into the maintenance processes	316
4.	Summary and Discussion	316
	References	317
<b>Part V</b>	<b>Life-Cycle Optimized Usage of Smart Battery Products</b>	<b>319</b>
Chapter 15	A Battery Circular Economy — Definition, Significance and End-of-Life Strategies	321
	<i>Jan Koller, Oliver Oechsle and Caroline Hellmich</i>	
1.	Introduction	321
2.	A Battery Circular Economy — Definition and Significance	322
3.	End-of-Life Strategies for Battery Systems	326
3.1.	Reuse	328
3.2.	Repurpose	329
3.3.	Remanufacturing	329
3.4.	Recycling	331
4.	Summary and Conclusion	332
	References	333
Chapter 16	Digitalization — A Driver for Circular Economy Solutions	337
	<i>Soumya Singh, Christian Schneider and Sabri Baazouzi</i>	
1.	Introduction	337
2.	Digitalization — Definition and Significance	339
2.1.	CPS architecture	341
2.2.	IoT and cloud components	341
2.3.	Digital twins	342

2.4. Visualization — AR and VR	343
2.5. ERP, MES	343
References	344
<b>Chapter 17 Smart Measuring — Measurement Assessment for Returned Batteries</b>	<b>347</b>
<i>Friedrich-Wilhelm Speckmann</i>	
1. Life Cycle Optimized Usage of Returned Batteries	347
2. Assessment of Returned Batteries — Smart Measuring	348
3. Overview of Battery Cell Assessment Methods	349
4. Uncertainty Management	351
5. Summary	351
References	352
<b>Chapter 18 Disassembly — A Requirement for Efficient Circularity of Battery Systems</b>	<b>355</b>
<i>Sabri Baazouzi, Max Weeber and Kai Peter Birke</i>	
1. Introduction	355
2. Disassembly Scenarios	357
2.1. Disassembly modes	357
2.1.1. Disassembly depth	358
2.1.2. Parallel disassembly	358
2.1.3. Disassembly techniques	360
2.1.4. Automation level	360
2.2. Disassembly planning	362
2.3. Disassembly scenarios for battery systems	363
3. Disassembly Factories for Battery Systems	365
3.1. Classification	365
3.2. Networks	365
3.3. Layouts	366
4. Summary	368
References	368
<b>Chapter 19 Battery Recycling — Material Recovery Processes</b>	<b>371</b>
<i>Steffen Kiemel, Inga Landwehr and Max Weeber</i>	
1. Introduction	371
2. General Types of Li-Ion Battery Processings	372
2.1. Thermal processing	372
2.2. Mechanical processing	374
2.3. Pyrometallurgical processing	374

2.4. Hydrometallurgical processing	375
2.5. Biometallurgical processing	376
3. Industrially Applied Processing Routes for Li-Ion Battery Recycling	377
4. Excursus: Direct Recycling as an Emerging Processing Route for Recycling Li-Ion Batteries	383
5. Summary	384
References	385

Chapter 20 Business Models for Second-Life Battery Applications <i>Sonja Rosenberg, Sandra Huster, Simon Glöser-Chahoud and Frank Schultmann</i>	391
---	-----

1. Introduction	391
2. Background and Usage of Business Models	392
3. Business Model with Remanufacturing of Batteries	393
4. Business Model with Repurposed Batteries	397
5. Summary and Conclusion	403
References	403

## Part VI Outlook 409

Chapter 21 Beyond Lithium Ion: All Solid-State Batteries <i>Duygu Karabelli and Kai Peter Birke</i>	411
--	-----

1. Top-Down: Why Solid-State Batteries?	411
2. Solid-State Electrolytes as Powders: The Challenge of Contacting	413
3. The Five Main Paths of Manufacturing Solid-State Cells	414
4. Hybrid Approaches	415
5. How Solid is Solid?	417
6. Manufacturing as the Highest Hurdle of Solid-State Cells	418
7. Solid Electrolyte Cost as Game Changer for Promising Candidates	419
8. How Digital Can Become Manufacturing of Solid-State Cells	419
9. Next Steps for Solid-State Batteries	421
References	421

Index	425
