2 Magnetism and Magnetotransport Properties of Transition Metal Zintl Isotypes	37
2.1 Introduction	37
2.2 Structure	38
2.3 Magnetism	41
2.3.1 Alkaline Earth Compounds	43
2.3.2 High-temperature Paramagnetic Susceptibility	43
2.3.3 Ytterbium Compounds	48
2.3.4 Europium Compounds	49
2.4 Heat Capacity	53
2.5 Magnetotransport	54
2.5.1 Alkaline Earth and Ytterbium Compounds	54
2.5.2 Resistivity and Magnetoresistance of the Europium Compounds	57
2.5.3 Comparison with other Magnetoresistive Materials	60
2.6 Summary and Outlook	61
References	61
3 Magnetic Properties of Large Clusters	63
3.1 Introduction	63
3.2 Calculation of the Energy Levels and Experimental Confirmations	65
3.2.1 Calculations	65
3.2.2 Inelastic Neutron Scattering	68
3.2.3 Polarized Neutron Scattering	70
3.2.4 High-field Magnetization	72
3.3 Magnetic Measurements	76
3.3.1 Introduction	76
3.3.2 AC Susceptibility Measurements	77
3.3.3 Cantilever Magnetometry	79
3.3.4 MicroSQUID Arrays	83
3.4 Magnetic Resonance Techniques	85
3.4.1 Introduction	85
3.4.2 HF-EPR	85
3.4.3 Zero-field EPR	87
3.4.4 Low-frequency EPR	88
3.4.5 NMR	89
3.4.6 μ SR	94
3.5 Control of the Nature of the Ground State and of the Anisotropy	97
3.6 Fe ₈ – A Case History	99
3.7 Conclusions and Outlook	103
