Preface	xxv

PART 1 INTRODUCTION

CHAPTER 1	Overview of kinematics and its algebras	3
1.1	Preamble	3
1.2	Origins of kinematics	4
1.3	Algebras of kinematics	9
1.3.1	Complex numbers	10
1.3.2	Quaternion and vector algebras	11
1.3.3	Lie algebras	13
1.3.4	Motor algebra and screw algebra	13
	References	15
CHAPTER 2	Overview of mechanisms and robot manipulators	17
2.1	Preamble	17
2.2	Machines and mechanisms, their origins	18
2.3	Automata	22
2.4	Robot manipulators	23
2.4.1	Serial manipulators	24
2.4.2	Parallel manipulators	26
2.4.3	Hybrid manipulators	29
	References	31

PART 2 MATHEMATICAL BACKGROUND

CHAPTER 3	Linear algebra	35
3.1	Preamble	35
3.2	Matrices	36
3.2.1	Glossary of matrices	37
3.2.2	Operations with matrices	42
3.2.3	Jacobian matrix	45
3.2.4	Hessian matrix	46
3.3	Determinants	46
3.4	Cayley-Hamilton theorem	47
3.5	Vectors	52
3.5.1	Operations with vectors	53

	Problems	55
	Matrices	55
	Determinants	58
	Cayley-Hamilton theorem	59
	Vectors	59
	References	59
CHAPTER 4	The Lie algebra $se(3)$ of the Euclidean group $SE(3)$	61
4.1	Preamble	61
4.2	Chasles' theorem	61
	Properties of the Chasles' theorem	63
4.3	Plücker coordinates	66
	Highlights of the reciprocal product	69
4.4	Operations of the Lie algebra $se(3)$ of the Euclidean group $SE(3)$	71
	Addition (+)	71
	Multiplication by a scalar (λ)	72
	Lie product ($[\]$)	72
	Killing form	73
	Klein form	73
	Problems	73
	References	74
CHAPTER 5	Polynomial	77
5.1	Preamble	77
5.2	Newton-Raphson method	79
5.3	Newton-homotopy method	83
5.4	Sylvester dialytic method of elimination	87
	5.4.1 Tsai's method	92
	Problems	95
	References	95
CHAPTER 6	Vector derivative	97
6.1	Preamble	97
6.2	Angular velocity vector	98
6.3	Orthonormal dextrogyrous basis	98
	Time derivative of vector $\hat{\mathbf{b}}_1$	99
	Time derivative of vector $\hat{\mathbf{b}}_2$	101
	Time derivative of vector $\hat{\mathbf{b}}_3$	102
6.4	Time derivative of an arbitrary vector	103
	6.4.1 Time derivative of a vector with fixed orientation	105
	6.4.2 Time derivative of a vector with arbitrary orientation	105
	Problems	106
	References	107

PART 3 GEOMETRY OF MECHANISMS

CHAPTER 7	Generalities	111
------------------	---------------------------	------------

7.1	Preamble	111
7.2	Mobility of a rigid body	111
	7.2.1 Particle	112
	7.2.2 Rigid body in the plane	113
	7.2.3 Rigid body in space	115
7.3	Links	117
7.4	Kinematic pairs	118
	7.4.1 Lower kinematic pairs	118
	7.4.2 Higher kinematic pairs	123
7.5	Kinematic chain	125
7.6	Grashof's criterion	129
	Problems	132
	References	133
CHAPTER 8	Mobility of mechanisms	135
8.1	Preamble	135
8.2	Grübler criterion	135
	8.2.1 Applications of the Grübler's criterion	136
	8.2.2 Exceptions to the Grübler criterion	142
8.3	Kutzbach-Grübler-Chebyshev criterion	146
	8.3.1 Applications of the Kutzbach-Grübler-Chebyshev criterion	146
	8.3.2 Exceptions to the Kutzbach-Grübler-Chebyshev criterion	151
8.4	Kutzbach-Grübler-Malyshev criterion	155
	8.4.1 Applications of the Kutzbach-Grübler-Malyshev criterion	155
	8.4.2 Exceptions to the Kutzbach-Grübler-Malyshev criterion	155
	Problems	156
	References	158
 PART 4 DISPLACEMENT		
CHAPTER 9	Closed kinematic chains	163
9.1	Preamble	163
	Graphical methods	163
	Numerical methods	164
	Algebraic geometry	165
9.2	Graphical methods	166
9.3	Numerical methods	171
	Newton-Raphson	171
	Newton-homotopy	173
9.4	Algebraic geometry	176
	Euclidean norm and natural coordinates	176
	Sylvester dialytic method of elimination	178
	Problems	180
	References	181
CHAPTER 10	Open kinematic chains	183

10.1	Preamble	183
10.2	Parallel reference frames	183
10.3	Rotating reference frames	188
	10.3.1 The two axes method	191
	10.3.2 Euler angles	194
	10.3.3 Craig's axis	195
	10.3.4 The three points method	196
10.4	General reference frame	200
10.5	Composition of transformations	203
10.6	Denavit-Hartenberg representation	206
	Applications	208
	Problems	211
	References	212

PART 5 VELOCITY

CHAPTER 11	Angular velocity	215
11.1	Preamble	215
11.2	Rotation about a fixed axis	215
11.3	Instantaneous velocity center	219
11.4	Instantaneous screw axis	220
11.5	The angular velocity tensor	222
11.6	Vector decomposition of angular velocity	223
11.7	The three-body method	225
	Generalization of the three-body method	230
	Problems	233
	References	235
CHAPTER 12	Vectorial method	237
12.1	Preamble	237
12.2	Velocity of a particle	238
12.3	Relative velocity in the rigid body	241
12.4	The three-body method	245
	Generalization of the three-body method	252
12.5	Applications of the vectorial method	253
	Sliding and rotating link	253
	Crank-slider mechanism	254
	Problems	257
	References	260
CHAPTER 13	Graphical method	261
13.1	Preamble	261
13.2	Instantaneous center of velocity in mechanisms	263
13.3	Aronhold-Kennedy theorem	264
13.4	Applications of the graphical method	266
	Four-bar mechanism	266

	Crank-slider mechanism	267
	Six-bar mechanism	270
	Problems	275
	References	277
CHAPTER 14	Analytical method	279
14.1	Preamble	279
14.2	Input-output equation of velocity	279
14.3	Singularity analysis	283
14.3.1	Forward singularity	284
14.3.2	Inverse singularity	284
14.3.3	Combined singularity	285
14.4	Applications of the analytical method	285
	Crank-slider mechanism	285
	Geneva wheel	290
	Four-bar mechanism	294
	RR-type open kinematic chain	300
	Problems	303
	References	308

PART 6 ACCELERATION

CHAPTER 15	Angular acceleration	313
15.1	Preamble	313
15.2	Rotation around a fixed axis	313
15.3	Instantaneous center of acceleration	317
15.4	The three-body method	322
	Generalization of the three-body method	324
15.5	Angular jerk	327
15.5.1	Rotation around a fixed axis	328
15.5.2	Instantaneous center of jerk	329
15.5.3	The three-body method	332
	Problems	333
	References	336
CHAPTER 16	Vectorial method	337
16.1	Preamble	337
16.2	Acceleration of a particle	338
16.3	Relative acceleration in a rigid body	341
16.4	The three-body method	344
	Generalization of the three-body method	346
16.5	Jerk	347
16.5.1	Relative jerk of rigid body	347
16.5.2	The three-body method	349
16.6	Applications of the vectorial method	352
	Translational and rotating link	352

	Crank-slider mechanism	353
	Disk with circular slot	356
	Problems	360
	References	364
CHAPTER 17	Analytical method	365
17.1	Preamble	365
17.2	Input-output equation of acceleration	365
17.3	Applications of the analytical method	368
	Crank-slider mechanism	368
	Geneva wheel	370
	Four-bar mechanism	372
	Problems	373
	References	377

PART 7 ROBOTICS

CHAPTER 18	Fundamentals of screw theory	381
18.1	Preamble	381
	18.1.1 Helicoidal vector field	381
	18.1.2 Velocity state of rigid body	381
	18.1.3 Accelerator: the acceleration state of rigid body	386
	18.1.4 Jerkor: the jerk state of rigid body	390
18.2	Velocity analysis in screw form	393
	18.2.1 Kinematic pairs in screw form	397
18.3	Acceleration analysis in screw form	405
18.4	Jerk analysis in screw form	413
	References	420
CHAPTER 19	Robot manipulators	421
19.1	Preamble	421
19.2	3- <u>R</u> RR planar parallel manipulator	432
	19.2.1 Position analysis	433
	19.2.2 Velocity analysis	437
	19.2.3 Acceleration analysis	440
	19.2.4 Singularity analysis	445
19.3	Gough-Stewart platform	448
	19.3.1 Position analysis	449
	19.3.2 Velocity analysis	452
	19.3.3 Acceleration analysis	454
	19.3.4 Jerk analysis	455
	19.3.5 Singularity analysis	458
19.4	SCARA robot	459
	19.4.1 Position analysis	460
	19.4.2 Velocity analysis	464
	19.4.3 Acceleration analysis	465

	19.4.4 Singularity analysis	466
19.5	PUMA robot	467
	19.5.1 Position analysis	467
	19.5.2 Velocity analysis	470
	19.5.3 Acceleration analysis	471
	19.5.4 Jerk analysis	472
	19.5.5 Singularity analysis	474
19.6	Parallel manipulator with configurable platform	474
	19.6.1 Position analysis	477
	19.6.2 Velocity analysis	478
	19.6.3 Acceleration analysis	480
	Changing the operation mode of the mechanism	481
	Numerical application	481
	References	486
APPENDIX A	Maple sheets	489
A.1	Preamble	489
	Chapter 3	490
	Chapter 4	492
	Chapter 5	494
	Chapter 11	497
	Chapter 12	497
	Chapter 18	498
