Preface.....	xi
Author	xv
Chapter 1 Maxwell's Equations	1
1.1 Maxwell's Equations in Vacuum	1
1.2 Polarization, Magnetization, and Conductivity	7
1.3 Maxwell's Equations in Terms of the Constitutive Parameters	13
1.4 Other Forms of Maxwell's Equations	19
1.5 Vector Potentials	21
1.6 Gauge Transformations and Lorenz's Conditions	26
1.7 Hertz's Vectors	28
1.8 Boundary Conditions	31
1.9 The Uniqueness Theorem	34
Problems	36
Chapter 2 Radiation Fields	39
2.1 The Hertzian Electric Dipole	39
2.2 The Line Current Source of Infinite Length	46
2.3 Far-Field Relations	51
2.4 Solution to the Inhomogeneous Wave Equation	53
2.5 The Small-Loop Radiator	55
2.6 The Hertzian Magnetic Dipole	60
2.7 Duality	65
2.8 Images	67
Problems	70
Chapter 3 Plane Waves	73
3.1 Properties of Plane Waves	73
3.2 Reflection and Transmission of Plane Waves	79
3.2.1 Perpendicular Polarization	79
3.2.2 Parallel Polarization	88
3.3 Reflection and Transmission in Dielectric Regions	93
3.4 Reflection and Transmission in Lossy Regions	98
3.4.1 Normal Incidence	98
3.4.2 Oblique Incidence	101
3.5 Other Types of Plane Waves	103
3.5.1 The Zenneck Wave	103
3.5.2 The Lateral Wave	105

3.5.3	The Trapped Wave.....	107
3.5.4	Other Types of Surface Waves.....	109
3.6	Reflection and Transmission from Interfaces	109
3.7	Waves in Inhomogeneous Regions	119
3.7.1	Rectangular Coordinates	119
3.7.2	Cylindrical Coordinates.....	134
3.8	The WKBJ Method	140
3.8.1	Normal Incidence	140
3.8.2	Oblique Incidence.....	151
	Problems	153
Chapter 4	Solutions to the Wave Equation	157
4.1	Wave Equations	157
4.2	Wave Equation in Rectangular Coordinates.....	157
4.3	Wave Propagation in Rectangular Geometries.....	163
4.3.1	Rectangular Waveguide	163
4.3.2	Rectangular Cavity	166
4.3.3	Partially Filled Rectangular Waveguide.....	169
4.3.4	Rectangular Waveguide Partially Filled with an Inhomogeneous Dielectric.....	176
4.3.5	The Rectangular Dielectric Waveguide.....	180
4.3.6	Dielectric Waveguide above a Conducting Plane	187
4.4	Wave Propagation in Cylindrical Geometries	189
4.4.1	The Cylindrical Waveguide	193
4.4.2	The Cylindrical Cavity.....	196
4.4.3	The Sectoral Waveguide	199
4.4.4	The Radial Waveguide.....	201
4.4.5	The Wedge Waveguide.....	203
4.4.6	The Sectoral Horn	204
4.4.7	The Bend Waveguide.....	206
4.4.8	The Cylindrical Dielectric Waveguide	207
4.4.9	The Dielectric Resonator	214
4.5	Wave Transformation from Rectangular to Cylindrical Coordinates	216
4.6	Wave Equation in Spherical Coordinates	217
4.6.1	The Conical Waveguide.....	226
4.6.2	The Spherical Cavity.....	228
4.6.3	The Ideal Earth-Ionosphere Cavity.....	231
4.7	Wave Transformation from Rectangular to Spherical Coordinates	234
	Problems	235
Chapter 5	Sturm-Liouville Equation and Green Functions.....	239
5.1	The Sturm-Liouville Equation.....	239

5.2	The Green Functions	244
5.3	Electromagnetic Fields Sources	252
5.4	Green Function Using Eigenfunctions Solutions	257
5.4.1	One-Dimension Green Functions in Rectangular Coordinates	257
5.4.2	Two-Dimensional Green Functions in Rectangular Coordinates	260
5.4.3	Two-Dimensional Green Functions in Cylindrical Coordinates.....	264
5.4.3.1	An Angular Sector	264
5.4.3.2	A Cylindrical Region	269
5.4.4	Green Functions in Spherical Coordinates.....	271
5.5	Green Functions with Continuous Eigenvalues.....	275
5.5.1	Green Function for an Infinite-Length Angular Configuration	278
5.6	Direct Method for Green Function Solutions.....	280
5.6.1	One Dimension.....	282
5.6.2	Rectangular Region	285
5.6.3	Angular Sector.....	287
5.6.4	Infinite-Length Angular Configuration	290
5.6.5	Cylindrical Region	292
5.6.5.1	Source Inside the Cylinder	292
5.6.5.2	Source Outside the Cylinder.....	295
5.6.6	Spherical Region	296
5.6.7	Spherical Conductor.....	300
	Problems	303
Chapter 6	Integral Transforms for Green Functions.....	307
6.1	Integral Transform for the Wave Equation in Rectangular Coordinates	307
6.1.1	One-Dimensional Green Function	310
6.1.2	Two-Dimensional Green Function.....	312
6.1.3	Three-Dimensional Green Function.....	316
6.2	Integral Transform for the Wave Equation in Cylindrical Coordinates	319
6.2.1	The Hankel Transform.....	320
6.2.2	Two-Dimensional Green Function.....	324
6.2.3	Three-Dimensional Green Function.....	327
6.3	Integral Transform for the Wave Equation in Spherical Coordinates	328
6.3.1	The Spherical Hankel Transform.....	329
6.3.2	Three-Dimensional Green Function.....	334
	Problems	336

Chapter 7	Some Mathematical Methods.....	337
7.1	The Watson Transformation.....	337
7.2	The Method of Stationary Phase.....	345
7.3	The Method of Laplace	347
7.4	The Method of Steepest Descent	349
7.5	Pole Near the Saddle Point	378
	Problems	385
Chapter 8	Further Studies of Electromagnetic Waves in Rectangular Geometries	389
8.1	The Parallel-Plate Waveguide	389
8.1.1	TM Modes	389
8.1.2	TE Modes	392
8.2	Parallel-Plate Waveguide with a Step Discontinuity	393
8.3	Electric Line Source above a Perfect Conductor	396
8.3.1	Electric Line Source above a Lossy Surface	400
8.4	Radiation from a Narrow Slit	405
8.5	Vertical Hertzian Dipole above a Lossy Surface	408
8.5.1	Electric Hertzian Dipole.....	408
8.5.2	Magnetic Hertzian Dipole.....	420
8.6	Horizontal Electric Hertzian Dipole above a Lossy Surface	426
8.7	Vertical Electric and Magnetic Dipoles in a Lossy Region	433
8.7.1	Electric Dipole.....	433
8.7.2	Magnetic Dipole	436
8.8	Radiation from an Aperture in a Plane.....	437
8.8.1	Rectangular Aperture	446
8.8.2	Circular Aperture.....	448
8.9	Radiation from Apertures Using the Equivalence Principle	450
	Problems	456
Chapter 9	Further Studies of Electromagnetic Waves in Cylindrical Geometries	457
9.1	Diffraction by a Conducting Cylinder	457
9.2	Diffraction by a Lossy Dielectric Cylinder	473
9.3	Conducting Cylinder and an Infinite-Length Current Source.....	476
9.3.1	Conducting Cylinder and a Dipole Source	481
9.4	Lossy Dielectric Cylinder and an Infinite-Line Current Source.....	484
9.5	A Wedge and an Infinite-Length Current Source	490
9.5.1	A Wedge and a Dipole Source.....	492

9.6	Vertical Electric Hertzian Dipole above a Lossy Surface	495
9.6.1	Fields in the Air Region	498
9.6.2	Fields in the Lossy Region	516
9.7	Vertical Magnetic Hertzian Dipole above a Lossy Surface	519
9.8	Vertical Electric Dipole in a Three-Layer Region	522
9.9	Lateral Waves	529
9.10	An Infinite-Length Slot in a Circular Cylinder	535
9.11	Radiation from an Aperture in a Circular Cylinder	543
	Problems	551
Chapter 10	Further Studies of Electromagnetic Waves in Spherical Geometries	555
10.1	Diffraction by a Conducting Sphere	555
10.2	Diffraction by a Dielectric Sphere	563
10.3	A Vertical Electric Dipole above a Conducting Sphere	566
10.4	A Vertical Electric Dipole above a Spherical Surface	573
10.5	A Vertical Electric Dipole in a Spherical Waveguide—Zonal Harmonics Solution	584
10.6	A Vertical Magnetic Dipole in a Spherical Waveguide—Zonal Harmonics Solution	595
10.7	A Horizontal Electric Dipole in a Spherical Waveguide—Zonal Harmonics Solution	600
10.8	A Vertical Electric Dipole in the Earth-Ionosphere Waveguide—Modal Solution	614
10.9	A Vertical Magnetic Dipole in the Earth-Ionosphere Waveguide—Modal Solution	620
10.10	A Horizontal Electric Dipole in the Earth-Ionosphere Waveguide—Modal Solution	623
	Problems	630
	Appendix A Nomenclature and Units	633
	Appendix B Vector and Other Identities	637
	Appendix C Bessel Functions	641
C.1	Bessel Functions of the First and Second Kind	641
C.2	Hankel Functions	646
C.3	Modified Bessel Functions	650
C.4	Spherical Bessel Functions	654
C.5	Complex Arguments	660
C.6	The Sommerfeld Integrals	662

Appendix D Airy Functions665

Appendix E Legendre Functions675

 E.1 Legendre’s Equation675

 E.2 Associated Legendre Equation679

 E.3 Spherical Harmonics682

 E.4 Complex Order685

Appendix F The Transformations $\lambda = k \sin \beta$ and $\lambda = k \cos \beta$ 687

Appendix G Error Function693

Appendix H Orthogonality of Radial Solutions in Mode Theory697

Index.....699
