

CONTENT

1	INTRODUCTION	4
2	STATE OF THE ART, THEORETICAL BACKGROUND	5
2.1	LTI-TDS models	5
2.2	Poles, zeros, stability of TDS	6
2.3	Algebraic structures for description and control of TDS	6
2.3.1	<i>R_{MS} ring</i>	8
2.4	Control system structures	8
2.5	Tuning of controllers for TDS	9
2.5.1	<i>Pole placement methods</i>	9
2.6	Robust stability and robust performance	10
2.7	Fundamentals of relay autotuning	10
2.8	Anisochronic controllers discretization	10
3	GOALS OF THE THESIS	11
4	ALGEBRAIC CONTROLLER DESIGN IN <i>R_{MS}</i> RING	11
4.1	Revisited <i>R_{MS}</i> definition	11
4.2	<i>R_{MS}</i> ring properties	12
4.3	Objectives in the controller design	12
4.3.1	<i>Derivation of controllers for 1DoF</i>	12
4.3.2	<i>Derivation of controllers for TFC</i>	12
4.4	Stability and robustness issues for control design	13
4.5	Tuning of anisochronic controllers	13
5	IMPROVED RELAY IDENTIFICATION TEST	14
6	LABORATORY PLANT APPLICATION	14
6.1	Relay identification tests simulation results	15
6.2	Controllers design and their simplification	15
6.3	Controllers robust analysis, tuning and simulation experiments	16
6.4	Feedback control applied to the laboratory plant	16
6.4.1	<i>Original controllers using the <i>R_{MS}</i> ring</i>	16
6.4.2	<i>Relay test based controllers using the <i>R_{MS}</i> ring</i>	16
6.4.3	<i>Simplified controllers using the Padé approximation</i>	18
7	CONTRIBUTIONS AND FURTHER DIRECTIONS	18
8	CONCLUSION	20
