Preface, vii	
Chapter 1 Crystals and lattices	
1-1	Definition of a crystal 1
1-2	Lattice points 4
1-3	Unit cells 7
1-4	Fractional coordinates 9
1-5	Unit cell calculations 9
1-6	Primitive and centered cells 10
Chapter 2 Symmetry	
2-1	Introduction 13
2-2	Definition of symmetry 14
2-3	Symmetry operations and elements of symmetry 14
2-4	Rotation axes 15
2-5	Mirror planes 16
2-6	Identity 18
2-7	Center of symmetry 19
2-8	Improper rotation axes 20

2-9	<i>Point symmetry</i>	23
2-10	<i>Combinations of symmetry elements</i>	24
2-11	<i>Point groups</i>	26
2-12	<i>Group multiplication table</i>	28
2-13	<i>Point group nomenclature</i>	30
2-14	<i>Determination of point groups</i>	43
2-15	<i>Limitation on combinations of symmetry elements</i>	44

Chapter 3 Crystal systems and geometry

3-1	<i>Classification of unit cells</i>	47
3-2	<i>Restrictions imposed by symmetry on unit cell dimensions</i>	48
3-3	<i>Crystal systems</i>	50
3-4	<i>Limitations on symmetry in crystals</i>	53
3-5	<i>Hermann–Mauguin notation</i>	54
3-6	<i>Bravais lattices</i>	55
3-7	<i>Distinction between trigonal and hexagonal systems</i>	59
3-8	<i>Crystal planes and indices</i>	63
3-9	<i>Law of rational indices</i>	66
3-10	<i>Interplanar spacings</i>	67

Chapter 4 Space groups and equivalent positions

4-1	<i>Translational symmetry</i>	69
4-2	<i>Screw axes</i>	70
4-3	<i>Glide planes</i>	71
4-4	<i>Space groups</i>	71
4-5	<i>Relationship between space groups, point groups, and physical properties</i>	72
4-6	<i>Equivalent positions</i>	74
4-7	<i>Special positions</i>	75
4-8	<i>Space group tables in International Tables for X-ray Crystallography</i>	76
4-9	<i>Examples of the use of space group tables</i>	77
4-10	<i>Equivalent positions and the choice of origin</i>	81

Chapter 5 X-ray diffraction

5-1	<i>Periodicity and structural information</i>	85
5-2	<i>The diffraction grating</i>	87
5-3	<i>Diffraction of X rays by crystals</i>	88
5-4	<i>The Laue equations</i>	89
5-5	<i>Rotating crystal method</i>	90

5-6	<i>Bragg's law</i>	92
5-7	<i>Generalization of Miller indices</i>	94
5-8	<i>Weissenberg camera</i>	95
5-9	<i>Buerger precession camera</i>	97
5-10	<i>Comparison of Weissenberg and precession techniques</i>	98
5-11	<i>Information obtained from diffraction patterns</i>	99
5-12	<i>Electron density function</i>	100
5-13	<i>Fourier series</i>	100
5-14	<i>Fourier expansion of electron density</i>	102
5-15	<i>Intensities of diffraction spots</i>	103
5-16	<i>The phase problem</i>	103
5-17	<i>Calculation of structure factors</i>	104
5-18	<i>Effect of thermal vibration</i>	106
5-19	<i>Structure factors of centrosymmetric crystals</i>	106
5-20	<i>Friedel's law</i>	107
5-21	<i>Laue groups</i>	108
5-22	<i>Structure factors of sodium chloride</i>	109
5-23	<i>Extinctions due to glide planes</i>	110
5-24	<i>Extinctions due to screw axes</i>	111

Chapter 6 *Determination of atomic positions*

6-1	<i>Solutions of structure factor equations</i>	114
6-2	<i>The Patterson function</i>	114
6-3	<i>Heavy-atom methods</i>	118
6-4	<i>Isomorphous replacement</i>	119
6-5	<i>Superposition methods</i>	121
6-6	<i>Inequalities</i>	123
6-7	<i>Sayre-Cochran-Zachariasen relationship</i>	125
6-8	<i>Hauptman-Karle methods</i>	126
6-9	<i>Summary of phase-determining methods</i>	126
6-10	<i>Refinement</i>	127

Chapter 7 *Some simple structures*

7-1	<i>Close packing</i>	129
7-2	<i>Cubic close packing</i>	131
7-3	<i>Hexagonal close-packed structure</i>	133
7-4	<i>Body-centered cubic</i>	135
7-5	<i>Diamond structure</i>	137
7-6	<i>Graphite structure</i>	137
7-7	<i>Other elements</i>	138
7-8	<i>Sodium chloride structure</i>	139
7-9	<i>Cesium chloride structure</i>	140
7-10	<i>Fluorite structure</i>	141

7-11 Rutile structure	142
7-12 Zinc sulfide structure	143
7-13 Zincite structure	143
7-14 Other structures	144
Appendix 1 The 230 space groups	145
Appendix 2 The reciprocal lattice	149
Appendix 3 The powder method	153
Solutions to exercises,	157
Index,	161
Chapter 6. Crystallographic methods	
6-1 Solution of structures by the Patterson method	161
6-2 The Patterson function	161
6-3 Heavy-atom method	168
6-4 Isomorphous replacement	169
6-5 Superposition method	171
6-6 Isomorphous replacement	173
6-7 X-ray scattering: general relationship	175
6-8 Bragg's law	176
6-9 Summary of direct methods	177
6-10 Patterson method	178
Chapter 7. Crystallographic methods	
7-1 Close packing	181
7-2 Cubic close packing	181
7-3 Hexagonal close-packed structure	183
7-4 Body-centered cubic structure	183
7-5 Diamond structure	187
7-6 Graphite structure	187
7-7 Other elements	188
7-8 Sodium chloride structure	189
7-9 Calcium fluoride structure	190
7-10 Fluorite structure	191
