Preface to the Seventh Edition	xiii
Abbreviations and Notation	xv
1 Introduction	1
1.1 Some Representative Time Series	1
1.2 Terminology	8
1.3 Objectives of Time Series Analysis	9
1.4 Approaches to Time Series Analysis	11
1.5 Review of Books on Time Series	12
2 Basic Descriptive Techniques	15
2.1 Types of Variation	15
2.2 Stationary Time Series	17
2.3 The Time Plot	17
2.4 Transformations	18
2.5 Analysing Series that Contain a Trend and No Seasonal Variation	19
2.5.1 Curve fitting	20
2.5.2 Filtering	21
2.5.3 Differencing	25
2.5.4 Other approaches	25
2.6 Analysing Series that Contain a Trend and Seasonal Variation	25
2.7 Autocorrelation and the Correlogram	28
2.7.1 The correlogram	30
2.7.2 Interpreting the correlogram	31
2.8 Other Tests of Randomness	36
2.9 Handling Real Data	37
3 Some Linear Time Series Models	41
3.1 Stochastic Processes and Their Properties	41
3.2 Stationary Processes	42
3.3 Properties of the Autocorrelation Function	44
3.4 Purely Random Processes	45
3.5 Random Walks	47
3.6 Moving Average Processes	47

3.6.1	Stationarity and autocorrelation function of an MA process	48
3.6.2	Invertibility of an MA process	49
3.7	Autoregressive Processes	52
3.7.1	First-order process	53
3.7.2	General-order process	54
3.8	Mixed ARMA Models	59
3.8.1	Stationarity and invertibility conditions	60
3.8.2	Yule-Walker equations and autocorrelations	60
3.8.3	AR and MA representations	62
3.9	Integrated ARMA (or ARIMA) Models	63
3.10	Fractional Differencing and Long-Memory Models	64
3.11	The General Linear Process	69
3.12	Continuous Processes	69
3.13	The Wold Decomposition Theorem	70
4	Fitting Time Series Models in the Time Domain	77
4.1	Estimating Autocovariance and Autocorrelation Functions	77
4.1.1	Using the correlogram in modelling	80
4.1.2	Estimating the mean	80
4.1.3	Ergodicity	81
4.2	Fitting an Autoregressive Process	81
4.2.1	Estimating parameters of an AR process	82
4.2.2	Determining the order of an AR process	84
4.3	Fitting a Moving Average Process	88
4.3.1	Estimating parameters of an MA process	88
4.3.2	Determining the order of an MA process	90
4.4	Estimating Parameters of an ARMA Model	94
4.5	Model Identification Tools	97
4.6	Testing for Unit Roots	99
4.7	Estimating Parameters of an ARIMA Model	102
4.8	Box–Jenkins Seasonal ARIMA Models	103
4.9	Residual Analysis	107
4.10	General Remarks on Model Building	110
5	Forecasting	115
5.1	Introduction	115
5.2	Extrapolation and Exponential Smoothing	117
5.2.1	Extrapolation of trend curves	118
5.2.2	Simple exponential smoothing	118
5.2.3	The Holt and Holt–Winters forecasting procedures	120
5.3	The Box–Jenkins Methodology	123
5.3.1	The Box-Jenkins procedures	123
5.3.2	Other methods	127
5.3.3	Prediction intervals	128

5.4	Multivariate Procedures	135
5.4.1	Multiple regression	135
5.4.2	Econometric models	137
5.4.3	Other multivariate models	138
5.5	Comparative Review of Forecasting Procedures	138
5.5.1	Forecasting competitions	139
5.5.2	Choosing a non-automatic method	141
5.5.3	A strategy for non-automatic univariate forecasting	143
5.5.4	Summary	144
5.6	Prediction Theory	145
6	Stationary Processes in the Frequency Domain	149
6.1	Introduction	149
6.2	The Spectral Distribution Function	149
6.3	The Spectral Density Function	154
6.4	The Spectrum of a Continuous Process	157
6.5	Derivation of Selected Spectra	158
7	Spectral Analysis	167
7.1	Fourier Analysis	167
7.2	A Simple Sinusoidal Model	168
7.3	Periodogram Analysis	172
7.3.1	The relationship between the periodogram and the autocovariance function	175
7.3.2	Properties of the periodogram	175
7.4	Some Consistent Estimation Procedures	177
7.4.1	Transforming the truncated autocovariance function	177
7.4.2	Hanning	179
7.4.3	Hamming	180
7.4.4	Smoothing the periodogram	180
7.4.5	The fast Fourier transform (FFT)	183
7.5	Confidence Intervals for the Spectrum	185
7.6	Comparison of Different Estimation Procedures	186
7.7	Analysing a Continuous Time Series	191
7.8	Examples and Discussion	193
8	Bivariate Processes	199
8.1	Cross-Covariance and Cross-Correlation	199
8.1.1	Examples	201
8.1.2	Estimation	202
8.1.3	Interpretation	203
8.2	The Cross-Spectrum	204
8.2.1	Examples	206
8.2.2	Estimation	209
8.2.3	Interpretation	211

9	Linear Systems	217
9.1	Introduction	217
9.2	Linear Systems in the Time Domain	219
9.2.1	Some types of linear systems	219
9.2.2	The impulse response function: An explanation	221
9.2.3	The step response function	222
9.3	Linear Systems in the Frequency Domain	223
9.3.1	The frequency response function	223
9.3.2	Gain and phase diagrams	227
9.3.3	Some examples	229
9.3.4	General relation between input and output	231
9.3.5	Linear systems in series	236
9.3.6	Design of filters	237
9.4	Identification of Linear Systems	238
9.4.1	Estimating the frequency response function	240
9.4.2	The Box–Jenkins approach	243
9.4.3	Systems involving feedback	247
10	State-Space Models and the Kalman Filter	253
10.1	State-Space Models	253
10.1.1	The random walk plus noise model	256
10.1.2	The linear growth model	256
10.1.3	The basic structural model	257
10.1.4	State-space representation of an AR(2) process	258
10.1.5	Bayesian forecasting	259
10.1.6	A regression model with time-varying coefficients	260
10.1.7	Model building	260
10.2	The Kalman Filter	261
11	Non-Linear Models	267
11.1	Introduction	267
11.1.1	Why non-linearity?	267
11.1.2	What is a linear model?	270
11.1.3	What is a non-linear model?	271
11.1.4	What is white noise?	272
11.2	Non-Linear Autoregressive Processes	273
11.3	Threshold Autoregressive Models	274
11.4	Smooth Transition Autoregressive Models	280
11.5	Bilinear Models	284
11.6	Regime-Switching Models	285
11.7	Neural Networks	290
11.8	Chaos	296
11.9	Concluding Remarks	300
11.10	Bibliography	301

12 Volatility Models	303
12.1 Structure of a Model for Asset Returns	303
12.2 Historic Volatility	305
12.3 Autoregressive Conditional Heteroskedastic (ARCH) Models	306
12.4 Generalized ARCH Models	311
12.5 The ARMA-GARCH Models	315
12.6 Other ARCH-Type Models	318
12.6.1 The integrated GARCH model	319
12.6.2 The exponential GARCH model	320
12.7 Stochastic Volatility Models	320
12.8 Bibliography	321
13 Multivariate Time Series Modelling	323
13.1 Introduction	323
13.1.1 One equation or many?	324
13.1.2 The cross-correlation function	326
13.1.3 Initial data analysis	327
13.2 Single Equation Models	330
13.3 Vector Autoregressive Models	331
13.3.1 VAR(1) models	331
13.3.2 VAR(p) models	332
13.4 Vector ARMA Models	334
13.5 Fitting VAR and VARMA Models	335
13.6 Co-Integration	344
13.7 Multivariate Volatility Models	345
13.7.1 Exponentially weighted estimate	345
13.7.2 BEKK models	346
13.8 Bibliography	348
14 Some More Advanced Topics	351
14.1 Modelling Non-Stationary Time Series	351
14.2 Model Uncertainty	353
14.3 Control Theory	355
14.4 Miscellanea	356
14.4.1 Autoregressive spectrum estimation	357
14.4.2 Wavelets	357
14.4.3 'Crossing' problems	358
14.4.4 Observations at unequal intervals, including missing values	358
14.4.5 Outliers and robust methods	359
14.4.6 Repeated measurements	361
14.4.7 Aggregation of time series	361
14.4.8 Spatial and spatio-temporal series	362
14.4.9 Time series in finance	362
14.4.10 Discrete-valued time series	364

Appendix A Fourier, Laplace, and z-Transforms	365
Appendix B Dirac Delta Function	369
Appendix C Covariance and Correlation	371
Answers to Exercises	373
References	381
Index	395
