

Contents

| | |
|--|-----------|
| Introduction | 3 |
| 1. Sampling material and sampling strategies | 4 |
| 1.1 Sampling in various biomes | 4 |
| 1.2 Sampling different life- and growth forms..... | 6 |
| 1.3 Sampling different parts of plants..... | 8 |
| 1.4 Sampling dead wood | 11 |
| 2. Collection and preservation..... | 13 |
| 2.1 Tools | 13 |
| 2.1.1 The importance of sharpening increment borers | 15 |
| 2.2 Preserving samples for structural analysis..... | 16 |
| 2.3 Labeling collected samples..... | 17 |
| 3. Sectioning and maceration | 18 |
| 3.1 Stabilization of the material..... | 18 |
| 3.2 Preparing stem disks for sectioning: sawing, splitting, and boiling | 19 |
| 3.3 Sectioning by hand..... | 21 |
| 3.4 Splitting and sectioning charcoal or mineralized wood | 22 |
| 3.5 Preparation of surfaces for macroscopic observation..... | 25 |
| 3.5.1 Making annual rings visible by cutting and sanding..... | 26 |
| 3.5.2 Observation surfaces by enhancing contrast..... | 28 |
| 3.6 Sectioning with microtomes..... | 30 |
| 3.6.1 Microtome knives | 31 |
| 3.6.2 Microtome types..... | 32 |
| 3.6.2.1 WSL-Core-microtome..... | 34 |
| 3.6.2.2 Microtome type GLS1..... | 35 |
| 3.6.2.3 WSL-Lab-microtome (modified Reichert-type) | 37 |
| 3.6.3 Sectioning with microtomes and observation without staining | 39 |
| 3.6.3.1 Material of normal stiffness | 39 |
| 3.6.3.2 Sectioning conifers | 41 |
| 3.6.3.3 Sectioning of very soft material | 42 |
| 3.6.3.4 Stabilization and sectioning of waterlogged archeological wet wood..... | 42 |
| 3.6.3.5 Observation of soft herb stems..... | 44 |
| 3.7 Storing glycerol-preserved sections | 45 |
| 3.8 Maceration and measuring axial cell dimensions | 46 |
| 3.9 Preparation of textile fibers..... | 48 |
| 3.10 Preparation of technically composed wood | 49 |

| | |
|--|-----------|
| 4. Fixation, bleaching, staining, embedding, cleaning, labeling and storing | 52 |
| 4.1 Effect of staining, and safety instructions..... | 52 |
| 4.2 Fixation of cell contents..... | 54 |
| 4.3 Bleaching: Destruction of cell contents and dark-stained cell wall components..... | 55 |
| 4.4 Staining cell walls | 56 |
| 4.5 Staining cell contents..... | 58 |
| 4.5.1 Nuclei and protoplasts..... | 58 |
| 4.5.2 Starch grains | 59 |
| 4.6 Staining cell walls and cell contents..... | 60 |
| 4.7 Staining hyphae, bacteria and decomposed cell walls..... | 61 |
| 4.8 Dehydration..... | 62 |
| 4.9 Embedding micro sections..... | 63 |
| 4.10 Drying and stabilizing | 65 |
| 4.11 Removing from plastic strips and cleaning slides | 66 |
| 4.12 Labeling | 67 |
| 4.13 Operating a line for staining, dehydrating and embedding..... | 67 |
| 4.14 Repairing cracked (embedded) slides | 68 |
| 4.15 Final storage..... | 68 |
| 4.16 Digital classification of slides..... | 70 |
| 4.17 Processing time..... | 70 |
| 5. Preparation errors | 71 |
| 6. Microscopic observation..... | 74 |
| 6.1 Polarized light | 74 |
| 6.2 Measuring cell dimensions..... | 76 |
| 6.3 Photography..... | 76 |
| References | 77 |
| Acknowledgements..... | 78 |
