

CONTENTS

Foreword	xvii
Preface to the First Edition	xix
Preface to the Second Edition	xxiii
Notations and Abbreviations	xxvii

I An Overview of QEPM 1

1. The Power of QEPM	3
1.1 Introduction	3
1.2 The Advantages of QEPM	8
1.3 Quantitative and Qualitative Approaches to Similar Investment Situations	12
1.4 A Tour of the Book	17
1.5 Conclusion	19

2. The Fundamentals of QEPM 23

2.1 Introduction	23
2.2 QEPM α	24
2.2.1 Benchmark α	25
2.2.2 CAPM α	25
2.2.3 Multifactor α	26
2.2.4 A Variety of α 's	26
2.2.5 Ex-Ante and Ex-Post α	28
2.2.6 Ex-Ante and Ex-Post Information Ratio	28

2.3	The Seven Tenets of QEPM	29
2.4	Tenets 1 and 2: Market Efficiency and Qepm	31
2.4.1	The Efficient-Market Hypothesis	31
2.4.2	Anomalies	35
2.4.3	Market Efficiency and QEPM	51
2.5	Tenets 3 and 4: The Fundamental Law, the Information Criterion, and Qepm	55
2.5.1	The Truth about the Fundamental Law	56
2.5.2	The Information Criterion	57
2.5.3	Information Loss	58
2.6	Tenets 5, 6, and 7: Statistical Issues in QEPM	59
2.6.1	Data Mining	59
2.6.2	Parameter Stability	64
2.6.3	Parameter Uncertainty	65
2.7	Conclusion	66
3.	Basic QEPM Models	73
3.1	Introduction	73
3.2	Basic QEPM Models and Portfolio Construction Procedures	74
3.2.1	Factor Choice	75
3.2.2	The Data Decision	76
3.2.3	Factor Exposure	77
3.2.4	Factor Premium	78
3.2.5	Expected Return	79
3.2.6	Risk	79
3.2.7	Forecasting	80
3.2.8	Security Weighting	80
3.3	The Equivalence of the Basic Models	81
3.4	The Screening and Ranking of Stocks with the Z-Score	83
3.5	Hybrids of the Models and the Information Criterion	83
3.5.1	The Setup	84
3.5.2	The Z-Score Model	85
3.5.3	A Hybrid of the Z-Score Model and a Fundamental Factor Model	86
3.5.4	Information Loss	87
3.6	Choosing the Right Model	89
3.6.1	Consistency with Economic Theory	89
3.6.2	Ability to Combine Different Types of Factors	90

3.6.3	Ease of Implementation	90
3.6.4	Data Requirement	90
3.6.5	Intuitive Appeal	91
3.7	Conclusion	92

II Portfolio Construction and Maintenance 97

4. Factors and Factor Choice 99

4.1	Introduction	99
4.2	Fundamental Factors	100
4.2.1	Valuation Factors	100
4.2.2	Size Factors	105
4.2.3	Operating Efficiency Factors	106
4.2.4	Operating Profitability Factors	108
4.2.5	Solvency Factors	110
4.2.6	Financial Risk Factors	112
4.2.7	Corporate Activity Factors	113
4.3	Technical Factors	114
4.3.1	Liquidity Risk Factors	115
4.3.2	Price-Based Factors	116
4.3.3	Volume-Based Factors	118
4.3.4	Overall Market Movement Factors	119
4.4	Economic Factors	120
4.5	Alternative Factors	121
4.5.1	Analyst Factors	121
4.5.2	Captivus Factors	123
4.5.3	Social Responsibility Factors	125
4.6	Factor Choice	128
4.6.1	Univariate Regression Tests	129
4.6.2	Multiple Regression Tests	130
4.6.3	Unidimensional Zero-Investment Portfolio	131
4.6.4	Multidimensional Zero-Investment Portfolio	133
4.6.5	Techniques to Reduce the Number of Factors	134
4.7	Conclusion	135

Appendix 4A: Factor Definition Tables 136

Appendix 4B: On Data Mining and Techniques to Adjust the Significance of Factors 148

4B.1	The Bonferroni-Type Adjustment	149
4B.2	A Bayesian Adjustment	150

- 5. Stock Screening and Ranking 155**
 - 5.1 Introduction 155
 - 5.2 Sequential Stock Screening 156
 - 5.3 Sequential Screens Based on Famous Strategies 159
 - 5.4 Simultaneous Screening and the Aggregate Z-Score 166
 - 5.4.1 The Z-Score 167
 - 5.4.2 The Aggregate Z-Score 170
 - 5.4.3 Ad Hoc Aggregate Z-Score 170
 - 5.4.4 Optimal Aggregate Z-Score 171
 - 5.4.5 Factor Groups and the Aggregate Z-Score 175
 - 5.5 The Aggregate Z-Score and Expected Return 181
 - 5.5.1 Expected Return Implied by the Z-Score 181
 - 5.5.2 Forecasting Rule of Thumb 182
 - 5.5.3 The Equivalence between the Z-Score Model and the Fundamental Factor Model 183
 - 5.6 The Aggregate Z-Score and the Multifactor α 184
 - 5.7 Conclusion 186

Appendix 5A: A List of Stock Screens Based on Well-Known Strategies 188

Appendix 5B: On Outliers 201

- 5B.1 General Concepts 201
- 5B.2 Specific Practical Techniques 202
 - 5B.2.1 Utilizing the Z-Score 202
 - 5B.2.2 The Interquartile Method 203
 - 5B.2.3 The Ranking Method 204
 - 5B.2.4 The Percentile Ranking Method 204

Appendix 5C: Converting Z-Scores to Returns 206

- 5C.1 A Numerical Example 207

6. Fundamental Factor Models 213

- 6.1 Introduction 213
- 6.2 Preliminary Work 217
 - 6.2.1 Choosing Factors 217
 - 6.2.2 Treatment of the Risk-Free Rate 218
 - 6.2.3 Choosing the Time Interval and Time Period 219
 - 6.2.4 Choosing the Universe of Stocks 221
- 6.3 Benchmark and α 222
- 6.4 Factor Exposure 223

- 6.5 The Factor Premium 226
 - 6.5.1 OLS Estimator of the Factor Premium 227
 - 6.5.2 Robustness Check 228
 - 6.5.3 Outliers and MAD Estimator of Factor Premium 229
 - 6.5.4 Heteroscedasticity- and Autocorrelation-Consistent Estimation of the Standard Error 231
- 6.6 Decomposition of Risk 233
- 6.7 Conclusion 235

7. Economic Factor Models 241

- 7.1 Introduction 241
- 7.2 Preliminary Work 245
- 7.3 Benchmark and α 247
- 7.4 The Factor Premium 248
 - 7.4.1 Factor Premium for Economic/Behavioral/Market Factors 248
 - 7.4.2 Factor Premium for Fundamental/Technical/Analyst Factors 250
 - 7.4.3 Factor Premium for Statistical Factors 252
- 7.5 Factor Exposure 253
 - 7.5.1 The Standard Approach 253
 - 7.5.2 When the Standard Approach Fails 256
- 7.6 Decomposition of Risk 258
 - 7.6.1 The Standard Approach 258
 - 7.6.2 When the Standard Approach Fails 259
- 7.7 Conclusion 260

8. Forecasting Factor Premiums and Exposures 265

- 8.1 Introduction 265
- 8.2 When Is Forecasting Necessary? 267
- 8.3 Combining External Forecasts 268
- 8.4 Model-Based Forecast 269
- 8.5 Econometric Forecast 269
- 8.6 Parameter Uncertainty 273
- 8.7 Forecasting the Stock Return 275
- 8.8 Conclusion 277

9. Portfolio Weights 283

- 9.1 Introduction 283
- 9.2 Ad Hoc Methods 285

- 9.3 Standard Mean-Variance Optimization 286
 - 9.3.1 No Constraints 288
 - 9.3.2 Short-Sale and Diversification Constraints 293
 - 9.3.3 Sector or Industry Constraints 296
 - 9.3.4 Trading-Volume Constraint 296
 - 9.3.5 Risk-Adjusted Return 297
- 9.4 Benchmark 298
- 9.5 Ad Hoc Methods Again 299
- 9.6 Stratification 301
- 9.7 Factor Exposure Targeting 303
- 9.8 Tracking-Error Minimization 306
 - 9.8.1 Direct Computation 306
 - 9.8.2 Tracking by Factor Exposure 308
 - 9.8.3 Ghost Benchmark Tracking 311
 - 9.8.4 Risk-Adjusted Tracking Error 311
- 9.9 Conclusion 312

Appendix 9A: Quadratic Programming 314

- 9A.1 Quadratic Programming with Equality Constraints 315
 - 9A.1.1 A Numerical Example 317
- 9A.2 Quadratic Programming With Inequality Constraints 319
 - 9A.2.1 A Numerical Example 320

Appendix 9B: Advanced Techniques for Quadratic Optimization 322

- 9B.1 Phantom Weights 322
- 9B.2 Binary Weights 323
- 9B.3 Quadratic Constraints 324
- 9B.4 Practical Examples 324
 - 9B.4.1 Market Neutrality with Leverage Constraints 324
 - 9B.4.2 Transactions Costs 324
 - 9B.4.3 Elimination of Small-Weight Stocks 325
 - 9B.4.4 Restricting the Number of Stocks 328

10 Rebalancing and Transactions Costs 335

- 10.1 Introduction 335
- 10.2 The Rebalancing Decision 337
 - 10.2.1 Rebalancing and Model Periodicity 337
 - 10.2.2 Change in α and Other Parameters 338
- 10.3 Understanding Transactions Costs 339

- 10.4 Modeling Transactions Costs 340
- 10.5 Portfolio Construction With Transactions Costs 342
 - 10.5.1 The Optimal Portfolio with Transactions Costs 342
 - 10.5.2 The Tracking Portfolio with Transactions Costs 344
- 10.6 Dealing with Cash Flows 345
 - 10.6.1 Reducing Transactions Costs Using Futures and ETFs 345
 - 10.6.2 Rebalancing toward Optimal Target Weights 346
- 10.7 Conclusion 353

Appendix 10A: Approximate Solution to the Optimal Portfolio Problem 354

Appendix 10B: An Exact Solution to the Optimal Portfolio Problem 356

- 10B.1 A Numerical Example 361

Appendix 10C: An Approximate Optimal Portfolio with Market Impact Costs 365

- 10C.1 Approximation of Transactions Costs 367
- 10C.2 Long-Only Portfolio 368
- 10C.3 Market-Neutral Portfolio 370
- 10C.4 Market Impact during Rebalancing 371
- 10C.5 A Numerical Example 372

11 Tax Management 379

- 11.1 Introduction 379
- 11.2 Dividends, Capital Gains, and Capital Losses 381
- 11.3 Principles of Tax Management 383
- 11.4 Dividend Management 385
- 11.5 Tax-Lot Management 388
- 11.6 Tax-Lot Mathematics 390
- 11.7 Capital Gain and Loss Management 391
- 11.8 Loss Harvesting 394
 - 11.8.1 Loss Harvesting and Reoptimizing 394
 - 11.8.2 Loss Harvesting and Characteristic Matching 396
 - 11.8.3 Loss Harvesting with a Benchmark 397
- 11.9 Gains from Tax Management 398
- 11.10 Conclusion 399

III α Mojo 403

12 Leverage 405

- 12.1 Introduction 405
- 12.2 Cash and Index Futures 407
 - 12.2.1 Theoretical Limits of Leverage 409
 - 12.2.2 Leverage Mechanics 410
 - 12.2.3 Expected Return and Risk 412
- 12.3 Stocks, Cash, and Index Futures 414
 - 12.3.1 Theoretical Limits to Leverage 415
 - 12.3.2 Leverage Mechanics 416
 - 12.3.3 Expected Returns and Risk 416
- 12.4 Stocks, Cash, and Single-Stock Futures 418
 - 12.4.1 Theoretical Limits of Leverage 419
 - 12.4.2 Leverage Mechanics 420
 - 12.4.3 Expected Returns, Risk, and α Mojo 423
- 12.5 Stocks, Cash, Individual Stocks, and Single-Stock and Basket Swaps 427
 - 12.5.1 Margining Individual Stocks 427
 - 12.5.2 Single-Stock and Basket Swaps 428
- 12.6 Stocks, Cash, and Options 430
- 12.7 Rebalancing 432
 - 12.7.1 Cash and Futures 432
 - 12.7.2 Stocks, Cash, and Futures 435
- 12.8 Liquidity Buffering 436
- 12.9 Leveraged Short 440
- 12.10 Conclusion 441

Appendix 12A: Fair-Value Computations 443

Appendix 12B: Derivation of Equations (12.21), (12.22), and (12.23) 445

Appendix 12C: Tables of Futures Leverage Multipliers Needed to Achieve Various Degrees of Leverage 447

13 Market Neutral 455

- 13.1 Introduction 455
- 13.2 Market-Neutral Construction 457
 - 13.2.1 Security Selection 457
 - 13.2.2 Dollar Neutrality 458
 - 13.2.3 Beta Neutrality (a.k.a. Risk-Factor Neutrality) 459

13.2.4 Market-Neutral Portfolio Out of a Long-Only Portfolio 462

- 13.3 Market Neutral's Mojo 462
- 13.4 The Mechanics of Market Neutral 465
 - 13.4.1 Margin and Shorting 465
 - 13.4.2 The Margin and Market Neutral 467
 - 13.4.3 Sources of the Return 468
- 13.5 The Benefits and Drawbacks of Market Neutral 470
- 13.6 Rebalancing 475
- 13.7 General Long-Short 476
 - 13.7.1 Long-Short 477
 - 13.7.2 Equitization 477
 - 13.7.3 Portable α 478
 - 13.7.4 Pair Trading 481
- 13.8 Conclusion 484

Appendix 13A: Market-Neutral Portfolio Construction Techniques 485

13A.1 A Numerical Example 489

14 Bayesian α 497

- 14.1 Introduction 497
- 14.2 The Basics of Bayesian Theory 498
- 14.3 Bayesian α Mojo 501
- 14.4 Quantifying Qualitative Information 502
 - 14.4.1 Quantifying a Stock Screen 502
 - 14.4.2 Quantifying a Stock Ranking 504
 - 14.4.3 Quantifying the Buy and Sell Recommendations 505
- 14.5 The Z-Score-Based Prior 506
- 14.6 Scenario-Based Priors 507
- 14.7 Posterior Computation 510
- 14.8 The Information Criterion and Bayesian α 513
- 14.9 Conclusion 514

IV Performance Analysis 519

15 Performance Measurement and Attribution 521

- 15.1 Introduction 521
- 15.2 Measuring Returns 523
 - 15.2.1 No Cash Flows 524

15.2.2	Inflows and Outflows	527
15.2.3	Measuring Returns for Market-Neutral and Leveraged Portfolios	530
15.3	Measuring Risk	532
15.3.1	Standard Deviation	533
15.3.2	Semi-Standard Deviation	534
15.3.3	Tracking Error	535
15.3.4	CAPM β	536
15.3.5	Value-at-Risk	538
15.3.6	Covariance and Correlation	539
15.4	Risk-Adjusted Performance Measurement	539
15.4.1	The Sharpe Ratio	541
15.4.2	The Information Ratio	542
15.4.3	The CAPM α and the Benchmark α	543
15.4.4	The Multifactor α	545
15.4.5	Practical Issues with Risk-Adjusted Measures	548
15.5	Performance Attribution	551
15.5.1	Classical Attribution	551
15.5.2	Multifactor QEPM Attribution	554
15.6	Conclusion	559
Appendix 15A: Style Analysis		560
Appendix 15B: Measures of Opportunity		566
Appendix 15C: Short Returns		570
15C.1	A Numerical Example	571
Appendix 15D: Measuring Market Timing Ability		575
V Practical Application 585		
16	The Backtesting Process	587
16.1	Introduction	587
16.2	The Data and Software	588
16.3	The Time Period	594
16.4	The Investment Universe and the Benchmark	598
16.4.1	U.S. Equity Benchmarks	599
16.4.2	A Comparison of the Major U.S. Equity Benchmarks	602
16.4.3	The Most Popular Benchmarks and Our Benchmarks	604
16.5	The Factors	610

16.6	The Stock Return and Risk Models	629
16.7	Parameter Stability and the Rebalancing Frequency	630
16.8	The Various Types of Constructed Portfolios	633
16.8.1	Transaction Costs	634
16.8.2	Taxes	636
16.8.3	Leverage	639
16.8.4	Market-Neutral	639
16.9	Conclusion	640

Appendix 16A: Factor Formulas 642

17 The Portfolios' Performance 667

17.1	Introduction	667
17.2	The Performance of the Baseline Portfolio and Variations	668
17.2.1	The Fundamental Factor Model Performance	668
17.2.2	The Aggregate Z-Score Model Performance	671
17.2.3	The Economic Factor Model Performance	673
17.2.4	Performance Reports for Distribution	673
17.2.5	Performance Attribution for the Fundamental Factor Model Baseline Portfolio	677
17.3	The Transactions Cost-Managed Portfolio Performance	682
17.4	The Tax-Managed Portfolio Performance	684
17.5	The Leveraged Portfolio Performance	686
17.6	The Market-Neutral Portfolio Performance	688
17.7	Conclusion	691

Glossary 697
