

CONTENTS

Introduction	1
<i>W. D. Hart</i>	
I. Mathematical Truth	14
<i>Paul Benacerraf</i>	
II. Two Dogmas of Empiricism	31
<i>W. V. Quine</i>	
III. Access and Inference	52
<i>W. D. Hart</i>	
IV. The Philosophical Basis of Intuitionistic Logic	63
<i>Michael Dummett</i>	
V. Mathematical Intuition	95
<i>Charles Parsons</i>	
VI. Perception and Mathematical Intuition	114
<i>Penelope Maddy</i>	
VII. Truth and Proof: The Platonism of Mathematics	142
<i>W. W. Tait</i>	
VIII. Mathematics without Foundations	168
<i>Hilary Putnam</i>	
IX. The Consistency of Frege's <i>Foundations of Arithmetic</i>	185
<i>George Boolos</i>	
X. Arithmetical Truth and Hidden Higher-Order Concepts	203
<i>Daniel Isaacson</i>	
XI. Conservativeness and Incompleteness	225
<i>Stewart Shapiro</i>	
XII. Is Mathematical Knowledge Just Logical Knowledge?	235
<i>Hartry Field</i>	
XIII. The Structuralist View of Mathematical Objects	272
<i>Charles Parsons</i>
