Prologue A: Radioactivity/Nuclear Technology and our Well-being

A.1 Human health	2
A.1.1 X-ray diagnostic radiography	2
A.1.2 X-ray computed tomography (CT)	3
A.1.3 Single-photon emission computed tomography (SPECT)	10
A.1.4 Positron emission tomography (PET)	14
A.1.5 Radiation therapy	29
A.1.6 Radioactive nanoparticles in cancer imaging and therapy	49
A.2 Biological research	51
A.3 Food and agriculture	55
A.3.1 Insect pest control	56
A.3.2 Fertilizer-use and water-use efficiency	60
A.3.3 Radioimmunoassay in animal/human health	66
A.3.4 Isotope tracers in animal health and production	69
A.3.5 Plant breeding	70
A.4 Water resources	75
A.5 Greenhouse gases	79
A.6 Marine resources	83
A.6.1 Climate change and marine acidification	83
A.6.2 Ocean water transport and circulation	85
A.6.3 Harmful algal blooms (HABs) in marine coastal waters	86
A.6.4 Other isotope applications in marine science	88
A.7 Radiation technology	88

A.7.1 Research reactors and accelerators	88
A.7.2 Neutron diffraction and scattering	89
A.7.3 Neutron radiography	90
A.7.4 Neutron activation analysis	92
A.7.5 X-ray diffraction, emission, and fluorescence analysis	94
A.7.6 Radiation processing	99
A.8 Nuclear power	102
A.8.1 Nuclear fission	102
A.8.2 Desalination	103
A.8.3 Nuclear fusion	104
A.9 Summary	111

Part I History of discovery

1. Birth of Modern Physics: from the discovery of radioactivity to the discovery of the proton, electron, and atomic nucleus

1.1 Wilhelm C. Röntgen (1845–1923)	115
1.2 Henri Becquerel (1852–1908)	118
1.3 Pierre Curie (1859–1906) and Marie Curie (1867–1934)	120
1.4 Ivan Pavlovich Pulyuj (a.k.a Johann Pulyuj, 1845–1918)	124
1.5 Paul Villard (1860–1934)	130
1.6 Ernest Rutherford (1871–1937)	132
1.7 Johannes “Hans” Geiger (1881–1945)	140
1.8 Jean B. Perrin (1870–1942)	146
1.9 Joseph John Thomson (1856–1940)	149
1.9.1 Discovery of the electron	150
1.9.2 The discovery of a stable isotope of an element and mass spectrometry with Francis W. Aston	151
1.10 Francis W. Aston (1877–1945)	155
1.11 Hantaro Nagaoka (1865–1950)	161
1.12 James Clerk Maxwell (1831–1879)	163
1.13 Pieter Zeeman (1865–1943)	166

2. Birth of Quantum Physics: from Planck's quantum to Einstein's photon, de Broglie's wave-particle duality, and Stern and Gerlach's electron spin states	
2.1 Max Planck (1858–1947)	169
2.2 Louis de Broglie (1892–1987)	174
2.3 Albert Einstein (1879–1955)	177
2.3.1 Early years	178
2.3.2 Discovery of the photon particle	178
2.3.3 Discovery of molecular dimensions in Brownian motion	180
2.3.4 Relativity	181
2.3.5 Relativistic length contraction and time dilation	181
2.3.6 Length contraction in relativity	182
2.3.7 Time dilation in relativity	184
2.3.8 Evidence for relativity provided by muons in the showers of cosmic radiation	185
2.3.9 Evidence for relativity from particle accelerator experiments	187
2.3.10 Equivalence of mass and energy ($E = mc^2$)	187
2.3.11 Energy and mass in relativity	188
2.3.12 Relativistic mass calculations	189
2.3.13 Interaction of gravitational mass and photons	191
2.3.14 Professorships in Switzerland, the Czech Republic, Germany, and the United States	192
2.3.15 Einstein's letter to President Franklin D. Roosevelt	193
2.3.16 Einstein the pacifist	193
2.4 Hendrik A. Lorentz (1853–1928)	194
2.5 Clinton Davisson (1881–1958) and George Paget Thomson (1892–1975)	197
2.6 Niels Bohr (1885–1962)	207
2.7 Werner Heisenberg (1901–1976), Erwin Schrödinger (1887–1961), Max Born (1882–1970), and Paul A.H. Dirac (1902–1984)	221
2.8 Otto Stern (1888–1969)	240
2.9 Robert A. Millikan (1868–1953) and Harvey Fletcher (1884–1981)	244
3. Revelations in Nuclear Decay Processes: from Soddy's displacement law to Pauli's neutrino in beta decay	
3.1 Frederick Soddy (1877–1956)	255
3.2 Frédéric Joliet (1900–1958) and Irène Joliet-Curie (1897–1956)	259
3.3 Wolfgang Pauli (1900–1958)	263
3.4 Frederick Reines (1918–1998) and Clyde L. Cowan, Jr. (1919–1974)	269
3.5 Chen-Ning Yang (1922–), Tsung-Dao Lee (1926–), and Chien-Shiung Wu (1912–1997)	275
3.5.1 Parity violation in beta decay	278
3.6 Willard F. Libby (1908–1980)	285
4. Discoveries on the Interaction of Radiation with Matter: from X-ray diffraction to the Compton Effect	
4.1 Henry G.J. Moseley (1887–1915)	295
4.2 Charles Glover Barkla (1877–1944)	299
4.3 C.T.R. Wilson (1869–1959)	300
4.4 Arthur H. Compton (1892–1962)	305
4.5 Wu Youxun (1897–1977)	310
4.6 Max von Laue (1879–1960)	311
4.7 Sir William Henry Bragg (1862–1942) and Sir William Lawrence Bragg (1890–1971)	315
4.8 Rosalind Franklin (1920–1958)	321
4.9 Manne Siegbahn (1886–1978)	326
4.10 Homi J. Bhabha (1909–1966)	329
5. Era of Cherenkov Radiation Discoveries: from the discovery of Cherenkov radiation to the characterization of the Cherenkov Effect	
5.1 Sergei Ivanovich Vavilov (1891–1951)	333
5.2 Pavel Alekseyevich Cherenkov (1904–1990)	341
5.3 Il'ja Mikhailovich Frank (1908–1990) and Igor Yevgenyevich Tamm (1895–1971)	357
6. Era of Cosmic Radiation Discoveries: from the discovery of cosmic rays to the component particles and properties of cosmic radiation showers	
6.1 Victor F. Hess (1883–1964)	363
6.2 Carl D. Anderson (1905–91)	367
6.3 Patrick M. S. Blackett (1897–1974)	375
6.4 Hideki Yukawa (1907–1981)	383
6.5 Cecil F. Powell (1903–1969)	386
6.6 Pierre Victor Auger (1899–1993)	398
6.7 Manuel Sandoval Vallarta (1899–1977)	401

7. Nuclear Era: from the discovery of the neutron to nuclear fission, nuclear energy, and nuclear nonproliferation

7.1	James Chadwick (1891–1974)	405
7.2	Lise Meitner (1878–1968) and Otto Hahn (1879–1968)	412
7.3	Enrico Fermi (1901–1954)	421
7.4	Leo Szilard (1898–1964)	427
7.5	Eugene P. Wigner (1902–1995)	455
7.6	Hans A. Bethe (1906–2005)	458
7.7	Edwin M. McMillan (1907–1991)	464
7.8	Glenn T. Seaborg (1912–1999)	468
7.9	Gustav Hertz (1887–1975) and James Franck (1882–1964)	474
7.10	The Franck Report, June 11, 1945: James Franck (Chairman)	477
7.10.1	Preamble	477
7.10.2	Prospectives of armaments race	478
7.10.3	Prospectives of agreement	478
7.10.4	Methods of international control	478
7.11	The Frank–Hertz experiment	479
7.12	Yoshio Nishina (1890–1951)	482
7.12.1	Formation into Japan's pioneer of modern physics	482
7.12.2	Pioneer of modern physics	483
7.12.3	Work on atomic bomb project	484
7.12.4	Heartbreaking loss and recovery	485
7.13	Joseph Rotblat (1908–2005) and the Pugwash Conferences	486
7.14	The Russell–Einstein Manifesto, London, July 9, 1955	491
7.14.1	Resolution	492
7.14.2	Signed	492
7.15	Edward Teller (1908–2003)	495

8. Breakthroughs in Nuclear Properties, Nuclear Stability, and Accelerators: from magic numbers to magnetic resonance, and the discovery of the antinucleons

8.1	Maria Goeppert-Mayer (1906–72) and J. Hans D. Jensen (1907–73)	503
8.2	Isidor Isaac Rabi (1898–1988)	508
8.3	Important developments from Rabi's work on nuclear magnetic resonance	513
8.3.1	Magnetic properties of nucleons	513
8.3.2	Nuclear magnetic resonance (NMR) spectroscopy	516
8.3.3	Magnetic resonance imaging	520

8.4	John D. Cockcroft (1897–1967) and Ernest T.S. Walton (1903–95)	522
8.5	Marcus L.E. Oliphant (1901–2000)	531
8.6	Ernest O. Lawrence (1901–58)	539
8.7	Emelio G. Segrè (1905–1989) and Owen Chamberlain (1920–2006)	546
8.8	Richard P. Feynman (1918–88)	557

9. Era of Particle Physics and the Role of Fundamental Particles in Beta Decay: from the discovery of particles, advances in our understanding of particle interactions and beta decay to the structure of matter

9.1	Donald A. Glaser (1926–2013)	563
9.2	Luis W. Alvarez (1911–88)	571
9.3	Murray Gell-Mann (1929–2019) and Kazuhiko Nishijima (1926–2009)	577
9.3.1	Strangeness	580
9.3.2	The Eightfold Way	583
9.3.3	Quarks	586
9.4	George Zweig (1937–)	588
9.5	Oscar Wallace Greenberg (1932–), Moo-Young Han (1934–2016), and Harald Fritzsch (1943–)	595
9.6	Jerome I. Friedman (1930–), Henry W. Kendall (1926–1999), and Richard E. Taylor (1929–2018)	598
9.7	Sheldon L. Glashow (1932–), Abdus Salam (1926–1996) and Steven Weinberg (1933–2021), Gerardus 't Hooft (1946–) and Martinus J. G. Veltman (1931–2021), Carlo Rubbia (1934–) and Simon van der Meer (1925–2011)	604
9.8	Yoichiro Nambu (1921–2015), Makoto Kobayashi (1944–), and Toshihide Maskawa (1940–2021)	619
9.9	François Englert (1932–) and Peter W. Higgs (1929–)	627

Part II Elements of nuclear and radiation physics

10. Basic Concepts and Definitions

10.1	Properties of atomic constituents	641
10.2	Nuclide nomenclature	642
10.3	Mass and energy	644
10.4	Q value	645
10.5	Naturally occurring radionuclides	646

10.5.1	Radionuclides of cosmogenic origin	646	13.6	X-radiation	716
10.5.2	Long-lived radionuclides	647	13.6.1	X-rays characterized by discrete spectral lines	717
10.5.3	Natural radioactive decay chains	648	13.6.2	Bremsstrahlung	719
10.6	Artificially produced radionuclides	649	13.6.3	X-rays from beta-particle emissions	724
11. Alpha Radiation			13.7	Synchrotron radiation	725
11.1	Introduction	653	13.7.1	Synchrotron radiation from natural sources	725
11.2	Decay energy	653	13.7.2	Discovery of synchrotron radiation	725
11.3	Alpha decay energy and half-life relationship	656	13.7.3	Synchrotron radiation and accelerated electron properties	728
11.4	Alpha particle interactions with matter	658	13.7.4	Synchrotron radiation production and applications	729
11.5	Alpha particle ranges	661	13.8	Interaction of electromagnetic radiation with matter	733
12. Beta Radiation and Beta Decay			13.8.1	Introduction	733
12.1	Introduction	667	13.8.2	Photoelectric effect	733
12.2	Negatron (β^-) emission	667	13.8.3	Compton effect	734
12.2.1	Basic principles	668	13.8.4	Pair production	736
12.2.2	Inverse beta decay	670	13.8.5	Combined photon interactions	739
12.2.3	Neutrino mass	671	14. Neutron Radiation		
12.2.4	Negatron decay energy	672	14.1	Introduction	747
12.3	Positron (β^+) emission	675	14.2	Neutron classification	747
12.3.1	Basic principles	675	14.3	Neutron sources	752
12.3.2	N/Z ratios and beta decay	677	14.3.1	Alpha-particle-induced nuclear reactions	753
12.3.3	Positron decay energy	677	14.3.2	Spontaneous fission	756
12.4	Electron capture	680	14.3.3	Neutron-induced fission	756
12.4.1	Basic principles	680	14.3.4	Photoneutron (γ, n) sources	760
12.4.2	EC decay energy	681	14.3.5	Accelerated particle (d, n) and (p, n) sources	762
12.4.3	Chemical and pressure effects on EC decay rates	684	14.3.6	Thermonuclear fusion	763
12.5	Branching β^-, β^+, and EC decay	685	14.3.7	Inertial electrostatic confinement fusion (IECF)	766
12.6	Double-beta ($\beta\beta$) decay	686	14.4	Interactions of neutrons with matter	767
12.6.1	Discovery and current research	687	14.4.1	Elastic scattering	768
12.6.2	$\beta\beta$ decay energy	688	14.4.2	Inelastic scattering	769
12.6.3	Neutrinoless $\beta\beta$ decay	690	14.4.3	Neutron capture	770
12.7	Beta-particle interactions with matter	692	14.4.4	Nonelastic reactions	771
12.8	Beta-particle absorption and transmission	696	14.4.5	Nuclear fission	771
12.9	Stopping power and linear energy transfer	699	14.5	Neutron attenuation	771
12.9.1	Stopping power	700	14.5.1	Fast neutron macroscopic removal cross-sections	778
12.9.2	Linear energy transfer	705	14.6	Neutron decay	779
13. Electromagnetic Radiation: photons			15. Atomic Electron Radiation		
13.1	Introduction	709	15.1	Introduction	783
13.2	Dual nature: wave and particle	709			
13.3	Gamma radiation	712			
13.4	Annihilation radiation	715			
13.5	Cherenkov radiation	716			

15.2	Internal conversion (IC) electrons	783	18.8.1	Units of radioactivity	880
15.3	Auger and Coster–Kronig electrons	786	18.8.2	Correlation of radioactivity and radionuclide mass	882
15.4	Auger therapy	792			
15.5	Auger electron spectroscopy	794			
16.	Cosmic Radiation		19.	The Atomic Nucleus	
16.1	Introduction	795	19.1	Introduction	885
16.2	Classification and properties	796	19.2	Nuclear radius and density	885
16.3	Showers of cosmic radiation	801	19.3	Nuclear forces	886
16.4	Cosmic rays underground	806	19.4	Binding energy	890
16.5	Origins of cosmic radiation	807	19.4.1	Nuclear fission	891
16.6	Cosmic microwave background radiation and the Big Bang theory	808	19.4.2	Nuclear fusion	893
16.7	Radiation dose from cosmic radiation and other sources	818	19.5	Nuclear models	896
17.	Cherenkov Radiation	823	19.5.1	Liquid drop model	896
17.1	Introduction	823	19.5.2	Shell model	900
17.2	Theory and properties	826	19.5.3	Collective model	903
17.2.1	Threshold condition	826	19.6	Superheavy nuclei	906
17.2.2	Threshold energies	827	19.7	Cluster radioactivity	909
17.2.3	Photon spatial asymmetry	828	19.8	Proton and neutron radioactivity	911
17.2.4	Photon spectrum and radiation intensity	832	19.8.1	Proton radioactivity	912
17.3	Cherenkov photons from gamma-ray interactions	835	19.8.2	Neutron radioactivity	918
17.4	Particle identification	835	19.9	Nuclear decay modes	921
17.4.1	Threshold and differential Cherenkov counters	836	19.10	Nuclear reactions	922
17.4.2	Mirror- or lens-focused ring-imaging Cherenkov (RICH) counters	840	19.10.1	Reaction types	922
17.4.3	Proximity-focusing RICH counters	845	19.10.2	Reaction notation	925
17.4.4	Time-of-propagation (TOP) Cherenkov counters	851	19.10.3	Energy of reactions (Q value)	926
17.4.5	Time-of-flight (TOF) Cherenkov counters	852	19.10.4	Reaction cross-section	929
17.5	Neutrino detection and measurement	857	19.11	Radioactive nuclear recoil	931
17.6	Applications in radionuclide analysis	862	19.11.1	Relativistic expressions	932
18.	Radionuclide Decay, Radioactivity Units, and Radionuclide Mass		19.11.2	Nonrelativistic expressions	933
18.1	Introduction	865	19.11.3	Sample calculations	934
18.2	Half-life	865	19.11.4	Radioactive recoil effects	937
18.3	General decay equations	873			
18.4	Secular equilibrium	874	Epilogue: the threat of nuclear weapons		
18.5	Transient equilibrium	876	E.1	Introduction	943
18.6	No equilibrium	879	E.2	Current world nuclear stockpiles	944
18.7	More complex decay schemes	879	E.3	Consequences of nuclear war	946
18.8	Radioactivity units and radionuclide mass	880	E.3.1	Blast wave and overpressure	947
			E.3.2	Nuclear electromagnetic pulse (NEMP)	949
			E.3.3	Nuclear weapon radioactive fallout	951
			E.3.4	Thermal radiation	964
			E.3.5	Infection, cancer, and communicable disease	966
			E.3.6	Nuclear winter	969
			E.4	Predicted casualties and aftermaths	979
			E.5	The probability of nuclear war	979
			E.6	Nuclear weapon proliferation and international efforts toward the reduction and elimination of nuclear weapons	986

E.6.1	Timeline of nuclear weapon states and their nuclear weapon stockpiles	986	E.7.2	The NWFZs—provide support to the NPT and nuclear disarmament, safety from nuclear destruction; but no safety from eventual fallout and nuclear winter	999
E.6.2	Current treaties aimed at nuclear nonproliferation, nuclear arms reduction, disarmament, and the establishment of nuclear-weapon-free zones	987	E.7.3	CTBT—the glue needed to strengthen the NPT	999
E.6.3	The nuclear non-proliferation treaty (NPT)	989	E.7.4	The New START—inadequate and ambiguous	1000
E.6.4	The nuclear-weapon-free zone (NWFZ) treaties	990	E.7.5	The TPNW—a treaty arising out of dissatisfaction and frustration	1000
E.6.5	The comprehensive nuclear-test-ban treaty (CTBT)	993	E.8	The Pugwash Conferences on Science and World Affairs	1002
E.6.6	The new strategic arms reduction treaty (New START)	995	E.9	Conclusion	1002
E.6.7	The treaty on the prohibition of nuclear weapons (TRNW)	996	Appendix A	Particle range—energy correlations	1005
E.7	The statuses and implications of current treaties	998	Appendix B	Derivation of the Lorentz transformations	1011
E.7.1	The NPT—on shaky ground	998	References		1017
