

Preface xvi

Part One Energy and Mass 1

1 Composition and Structure of the Atmosphere 2

The Atmosphere, Weather, and Climate	5
The Thickness of the Atmosphere	5
Composition of the Atmosphere	6
The Permanent Gases	7 / Variable Gases 7 / Aerosols 13
Vertical Structure of the Atmosphere	14
Density	14 / Layering Based on Temperature Profiles 16
A Layer Based on Electrical Properties: The Ionosphere	18
Evolution of the Atmosphere	20
Some Weather Basics	21
Atmospheric Pressure and Wind	21 / Temperature 22
Humidity	23
A Brief History of Meteorology	23
1-1 Focus on the Environment: Photosynthesis, Respiration, and Carbon Dioxide	10
1-2 Focus on the Environment: Depletion of the Ozone Layer	12
1-3 Physical Principles: The Three Temperature Scales	15
1-4 Focus on the Environment: Billion-Dollar Weather Disasters	24

2 Solar Radiation and the Seasons 30

Energy	31
Kinds of Energy	32 / Energy Transfer Mechanisms 33
Radiation	34
Radiation Quantity and Quality	35 / Intensity and Wavelengths of Emitted Radiation 36
The Solar Constant	42
The Causes of Earth's Seasons	43
Earth's Revolution and Rotation	43 / Changes in Energy Receipt with Latitude 49
2-1 Physical Principles: The Nature of Radiation, Absorption, and Emission	38
2-2 Physical Principles: The Sun	40

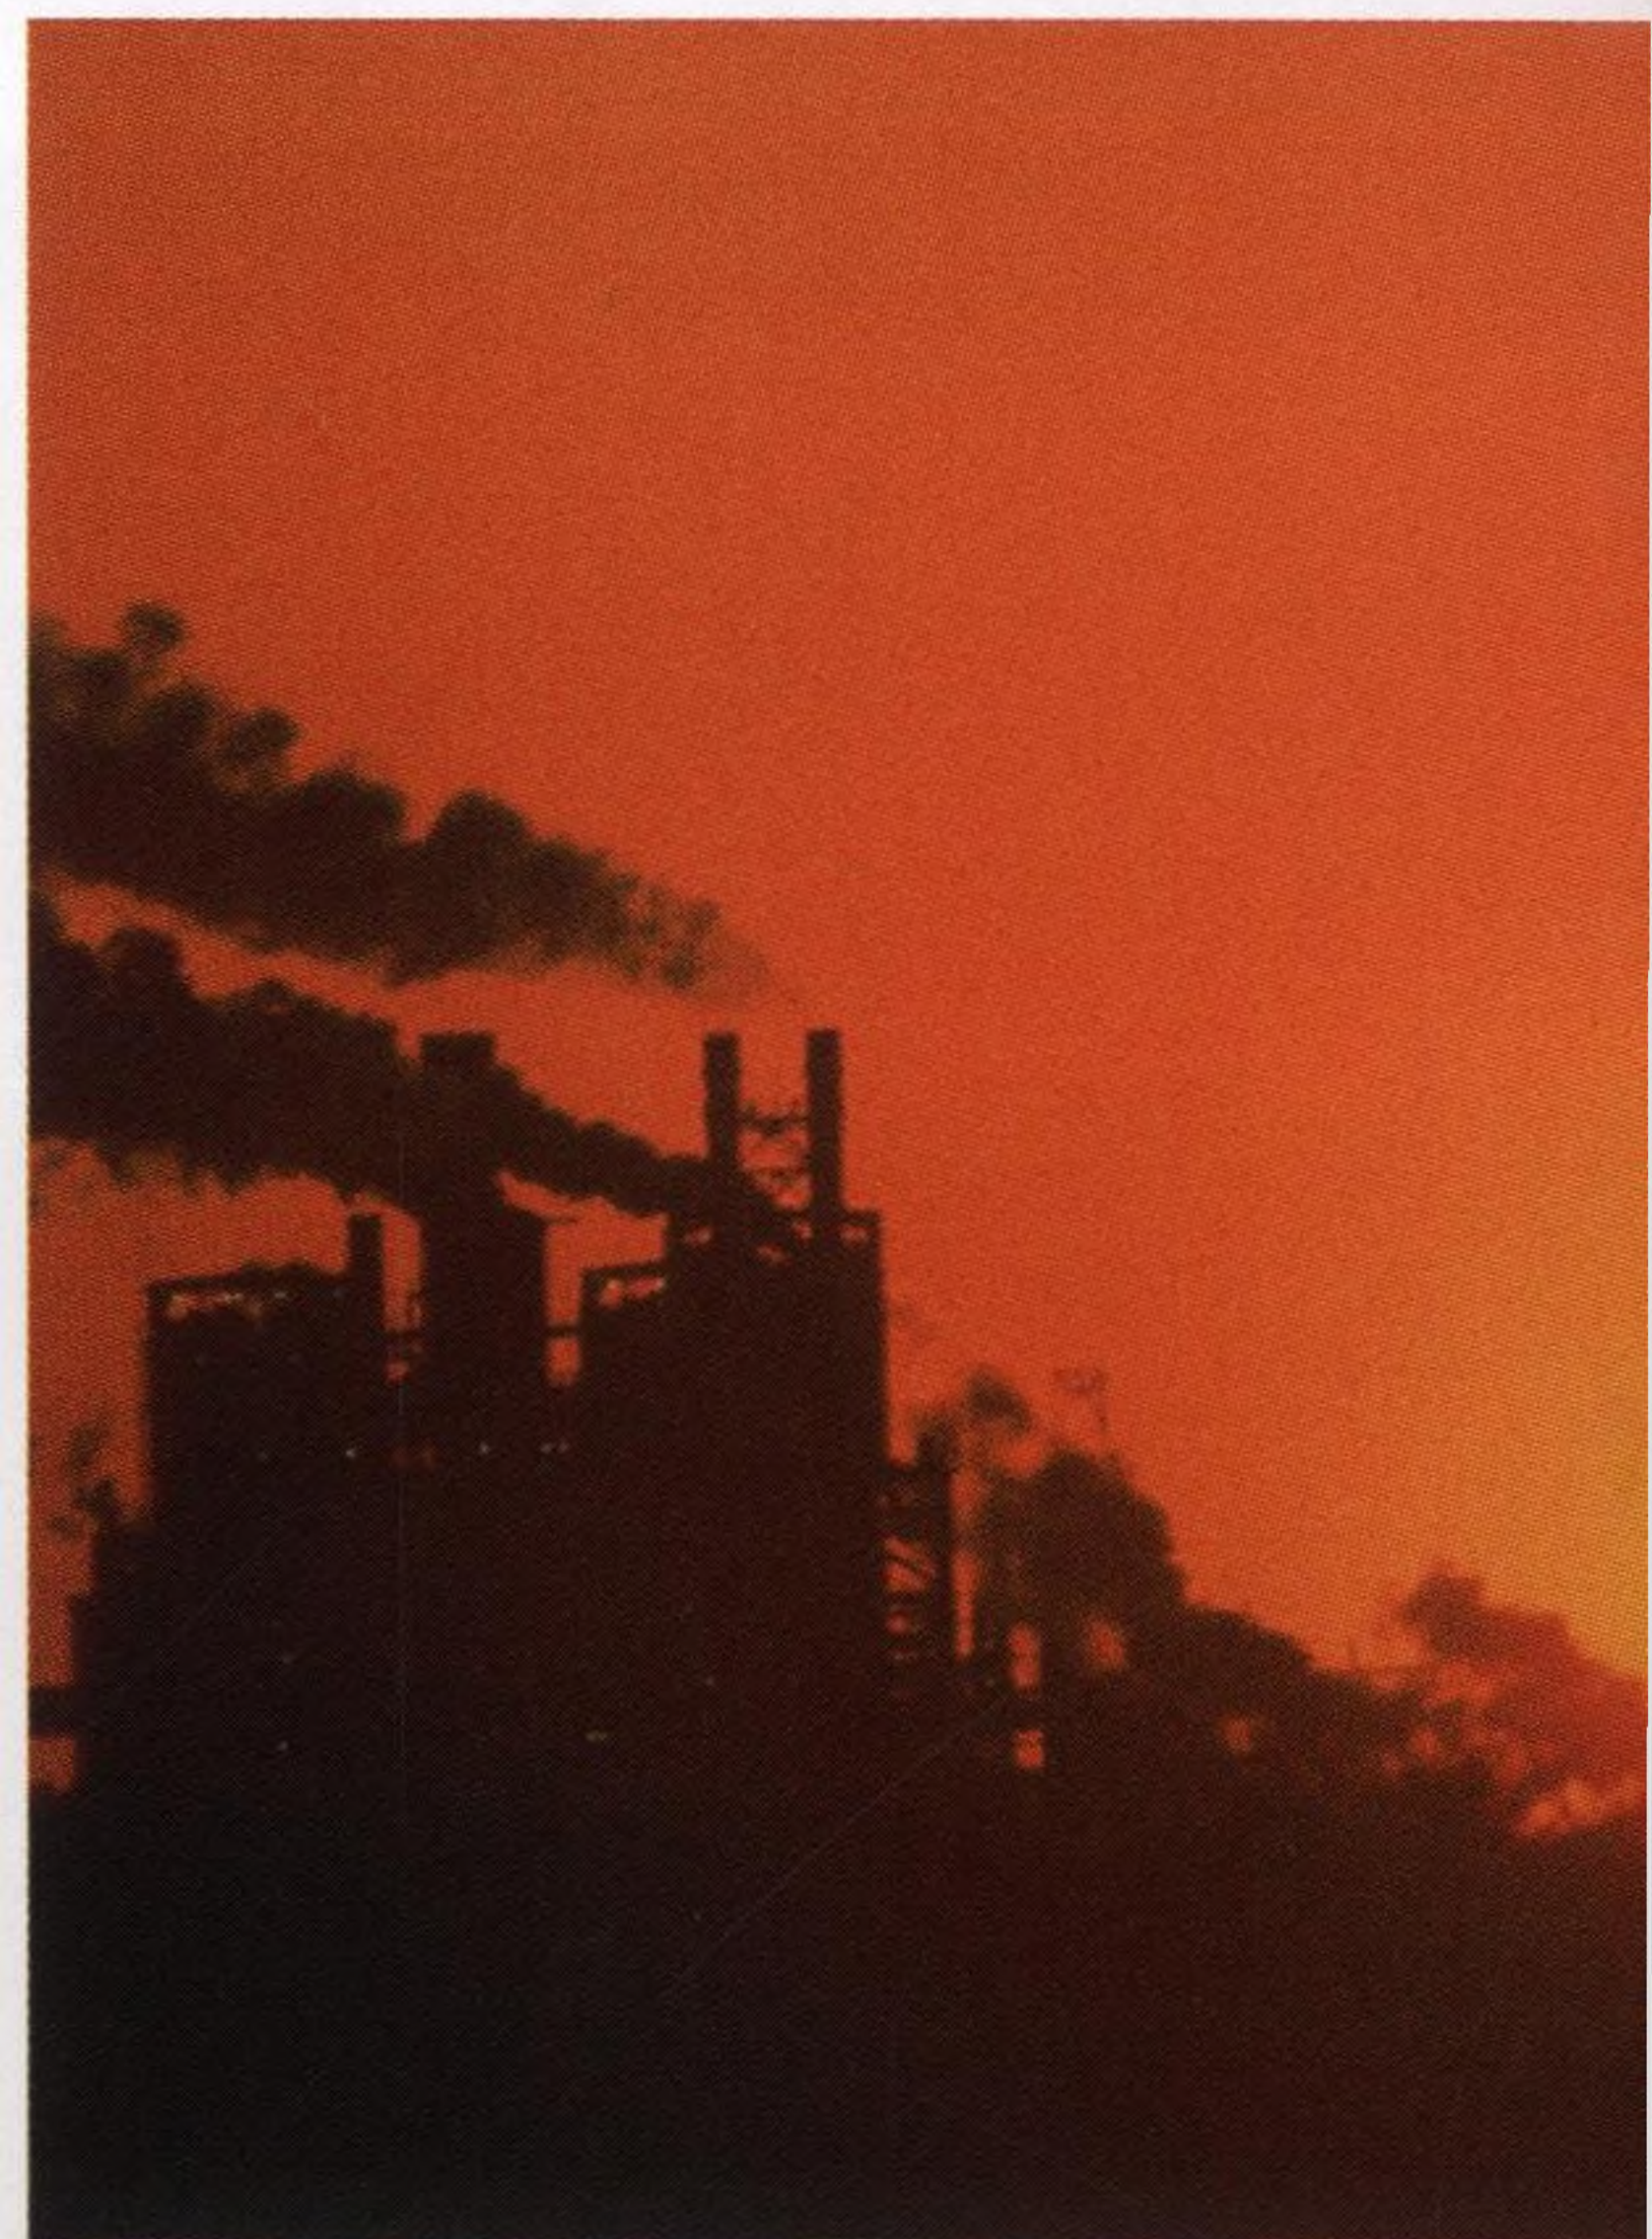

3 Energy Balance and Temperature 54

- Atmospheric Influences on Insolation 56
Absorption 56 / Reflection and Scattering 56 / Transmission 60
- The Fate of Solar Radiation 60
- Energy Transfer Processes Between the Surface and the Atmosphere 61
Surface-Atmosphere Radiation Exchange 61 / Conduction 64
Convection 64 / Net Radiation and Temperature 68
Latitudinal Variations 68
- The Greenhouse Effect 69
- Global Temperature Distributions 70
- Influences on Temperature 70
Latitude 70 / Altitude 70 / Atmospheric Circulation
Patterns 72 / Contrasts Between Land and Water 72 / Warm
and Cold Ocean Currents 74 / Local Conditions 74
- Daily and Annual Temperature Patterns 75
- Measurement of Temperature 78
Instrument Shelters 79
- Temperature Means and Ranges 80
Global Extremes 81
- Some Useful Temperature Indices 81
Wind Chill Temperatures 81 / Heating and Cooling
Degree-Days 85 / Growing Degree-Days 86
- Thermodynamic Diagrams and Vertical Temperature Profiles 86
- 3-1 Physical Principles:** Selective Absorption by Water Vapor
and Carbon Dioxide 63
- 3-2 Physical Principles:** Earth's Equilibrium Temperature 73
- 3-3 Special Interest:** Recent Severe Heat Waves 82

4 Atmospheric Pressure and Wind 92

- The Concept of Pressure 93
Vertical and Horizontal Changes in Pressure 94
- The Equation of State 96
- Measurement of Pressure 98
Mercury Barometers 98 / Corrections to Mercury Barometer
Readings 98 / Aneroid Barometers 100
- The Distribution of Pressure 100
Pressure Gradients 101 / Hydrostatic Equilibrium 102
- Horizontal Pressure Gradients in the Upper Atmosphere 103
- Forces Affecting the Speed and Direction of the Wind 105
The Coriolis Force 106 / Friction 107

Winds in the Upper Atmosphere	108
Gradient Flow	109 / Supergeostrophic and Subgeostrophic Flow 110
Near-Surface Winds	111
Cyclones, Anticyclones, Troughs, and Ridges	111
Measuring Wind	114
4-1 Physical Principles:	Velocity, Acceleration, Force, and Pressure 96
4-2 Physical Principles:	Variations in Density 99
4-3 Physical Principles:	The Hydrostatic Equation 104
4-4 Physical Principles:	The Coriolis Effect 108
4-5 Physical Principles:	The Equation of Motion 110
4-6 Special Interest:	Strong Winds and the Little Rock, Arkansas, Air Disaster 115

Part Two Water in the Atmosphere 120

5 Atmospheric Moisture 122

The Hydrologic Cycle	123
Water Vapor and Liquid Water	125
Evaporation and Condensation	125 / Indices of Water Vapor Content 126 / Vapor Pressure 126 / Absolute Humidity 127
Specific Humidity	127 / Mixing Ratio 128 / Relative Humidity 128 / Dew Point 130
Distribution of Water Vapor	132
Methods of Achieving Saturation	133
The Effects of Curvature and Solution	134
Effect of Curvature	134 / Effect of Solution 136 / Ice Nuclei 137
Measuring Humidity	138
High Humidities and Human Discomfort	141
Cooling the Air to the Dew or Frost Point	142
Diabatic Processes	143 / Adiabatic Processes 143 / The Environmental Lapse Rate 144
Forms of Condensation	146
Dew	146 / Frost 147 / Frozen Dew 147 / Fog 148
Distribution of Fog	150
Formation and Dissipation of Cloud Droplets	151
5-1 Forecasting:	Dew Point and Nighttime Minimum Temperatures 131
5-2 Forecasting:	Vertical Profiles of Moisture 135
5-3 Forecasting:	Water Vapor and Infrared Satellite Imagery 141
5-4 Physical Principles:	The Varying Value of the Saturated Adiabatic Lapse Rate 145

6 Cloud Development and Forms 156

Mechanisms That Lift Air 157

Orographic Uplift 158 / Frontal Lifting 159
Convergence 160 / Localized Convection 160

Static Stability and the Environmental Lapse Rate 160

Absolutely Unstable Air 161 / Absolutely Stable Air 163
Conditionally Unstable Air 163

Factors Influencing the Environmental Lapse Rate 164

Heating or Cooling of the Lower Atmosphere 164 / Advection
of Cold and Warm Air at Different Levels 164 / Advection
of an Air Mass with a Different ELR 165

Limitations on the Lifting of Unstable Air 165

A Layer of Stable Air 166 / Entrainment 166

Extremely Stable Air: Inversions 167

Cloud Types 169

High Clouds 171 / Middle Clouds 174 / Low Clouds 174
Clouds with Vertical Development 176 / Unusual Clouds 179

Cloud Coverage and Observation 180

Surface-Based Observation of Clouds 181 / Cloud Observation
by Satellite 182

6-1 **Forecasting:** Determining Stability from Thermodynamic Diagrams 168

6-2 **Special Interest:** Radiation Inversions and Human Activities 170

6-3 **Focus on the Environment:** The Unknown Influence of Clouds on Climatic Change 177

6-4 **Special Interest:** Why Clouds Have Clearly Defined Boundaries 178

6-5 **Physical Principles:** The Surprising Composition of Clouds 182

7 Precipitation Processes 188

Growth of Cloud Droplets 190

Growth by Condensation 190 / Growth in Warm Clouds 191
Growth in Cool and Cold Clouds 193

Distribution and Forms of Precipitation 195

Snow 196 / Rain 198 / Graupel and Hail 199 / Sleet 201
Freezing Rain 202

Measuring Precipitation 202

Raingages 202 / Snow Measurement 205

Cloud Seeding 206

7-1 **Physical Principles:** Why Cloud Droplets Don't Fall 192

7-2 **Physical Principles:** The Effect of Hail Size on Damage 200

Part Three Distribution and Movement of Air 210

8 Atmospheric Circulation and Pressure Distributions 212

- Single-Cell Model 214
- The Three-Cell Model 214
- The Hadley Cell 215 / The Ferrel and Polar Cells 216 / The
Three-Cell Model vs. Reality: The Bottom Line 216
- Semipermanent Pressure Cells 216
- The Upper Troposphere 220
- Westerly Winds in the Upper Atmosphere 221 / The Polar Front
and Jet Streams 222 / Troughs and Ridges 223
- Rossby Waves 224
- The Oceans 226
- Ocean Currents 226 / Upwelling 229
- Major Wind Systems 230
- Monsoons 231 / Foehn, Chinook, and Santa Ana Winds 233
- Katabatic Winds 235 / Sea and Land Breeze 236 / Valley
and Mountain Breeze 238
- Air–Sea Interactions 238
- El Niño, La Niña, and the Walker Circulation 239 / Pacific
Decadal Oscillation 248 / Arctic Oscillation 249
- 8–1 Physical Principles:** Problems with the Single-Cell Model 218
- 8–2 Physical Principles:** The Movement of Rossby Waves 226
- 8–3 Physical Principles:** The Dishpan Experiment 228
- 8–4 Focus on the Environment:** Wildfires 236
- 8–5 Physical Principles:** What Causes El Niños and the Southern
Oscillation? 243

9 Air Masses and Fronts 254

- Formation of Air Masses 255
- Source Regions 256 / Continental Polar (cP) and Continental
Arctic (cA) Air Masses 256 / Maritime Polar (mP) Air Masses 258
- Continental Tropical (cT) Air Masses 259 / Maritime Tropical (mT)
Air Masses 259
- Fronts 264
- Cold Fronts 265 / Warm Fronts 267 / Stationary Fronts 269
- Occluded Fronts 269 / Drylines 271
- 9–1 Special Interest:** Maritime Air Masses Invade Eastern
North America 260
- 9–2 Special Interest:** The Pineapple Express 266

Part Four Disturbances 276

10 Midlatitude Cyclones 278

Polar Front Theory 279

The Life Cycle of a Midlatitude Cyclone 280

Cyclogenesis 281 / Mature Cyclones 281 / Occlusion 282

Movement of Cyclones 282

Processes of the Middle and Upper Troposphere 284

Rossby Waves and Vorticity 284 / Surface Fronts and Upper-Level

Patterns 287 / Cold Fronts and the Formation of Upper-Level

Troughs 287 / Interaction of Surface and Upper-Level

Conditions 289

An Example of a Midlatitude Cyclone 292

April 15 293 / April 16 295 / April 17 296 / April 18 297

Flow Patterns and Large-Scale Weather 298

The Steering of Midlatitude Cyclones 298 / Migration

of Surface Cyclones Relative to Rossby Waves 299

The Modern View—Midlatitude Cyclones and Conveyor Belts 301

Anticyclones 302

10-1 Physical Principles: Vorticity and the Maintenance
of Rossby Waves 288

10-2 Physical Principles: A Closer Look at Divergence
and Convergence 290

10-3 Forecasting: Short Waves in the Upper Atmosphere and Their Effect
on Surface Conditions 292

11 Lightning, Thunder, and Tornadoes 306

Processes of Lightning Formation 308

Charge Separation 308 / Runaway Discharges 309

Leaders, Strokes, and Flashes 310 / Types of Lightning 311

Thunder 313

Lightning Safety 313

Thunderstorms: Air Mass and Severe 314

Air Mass Thunderstorms 314 / Severe Thunderstorms 316

Downbursts, Derechos, and Microbursts 326

Geographic and Temporal Distribution of Thunderstorms 327

Tornadoes 330

Tornado Characteristics and Dimensions 330 / Tornado

Formation 331 / The Location and Timing of Tornadoes 335

Trends in U.S. Tornado Occurrence 339 / Tornado Damage 339

Fatalities 341 / Watches and Warnings 343 / Convective

Outlooks 344 / Tornado Outbreaks 344 / Waterspouts 347

- 11-1 Physical Principles:** Electricity in the Atmosphere 310
- 11-2 Special Interest:** A Personal Account of Ball Lightning 312
- 11-3 Forecasting:** Potential Instability 318
- 11-4 Forecasting:** Doppler Radar 324
- 11-5 Special Interest:** Tornado Research 332

12 Tropical Storms and Hurricanes 352

- Hurricanes Around the Globe: The Tropical Setting 354
- Hurricane Characteristics 355
- Hurricane Structure 356
 - The Eye and the Eye Wall 358
- Hurricane Formation 360
 - Steps in the Formation of Hurricanes 360 / Conditions Necessary for Hurricane Formation 361
- Hurricane Movement and Dissipation 364
 - Hurricane Paths 364 / Effect of Landfall 365
- Hurricane Destruction and Fatalities 370
 - Wind 370 / Heavy Rain 371 / Tornadoes 372
 - Storm Surges 372
- Hurricane Forecasts and Advisories 375
 - Hurricane Watches and Warnings 375 / Hurricane Intensity Scale 379
- Recent (and Future?) Trends in Hurricane Activity 379
- 12-1 Special Interest:** Naming Hurricanes 362
- 12-2 Special Interest:** 2004 and 2005: Two Historic Hurricane Seasons 368
- 12-3 Special Interest:** Hurricane Katrina 376
- 12-4 Forecasting:** Seasonal and Long-Term Hurricane Forecasts 380
- 12-5 Special Interest:** The Galveston Hurricane of 1900 382

Part Five Human Activities 386

13 Weather Forecasting and Analysis 388

- Weather Forecasting—Both Art and Science 389
- Why Is Weather Forecasting Imperfect? 393
- Forecasting Methods 394
- Types of Forecasts 395
- Assessing Forecasts 396
- Data Acquisition and Dissemination 397
- Forecast Procedures and Products 400

Phases in Numerical Modeling	400	/	Medium-Range Forecasts	403
Long-Range Forecasts and Seasonal Outlooks	405			
Weather Maps and Images	407			
Surface Maps	407	/	Upper-Level Maps	408
Images	414	/	Radar Images	414
Thermodynamic Diagrams	415			
Lifted Index	417	/	K-Index	418
Chapter 13 Appendix: Numerical Forecast Models	422			
Model Characteristics	422			
Measures of Forecast Accuracy and Skill	425			
13-1 Special Interest:	Modernization of the National Weather Service		399	
13-2 Special Interest:	Television Weather Segments		417	

14 Human Effects: Air Pollution and Heat Islands 428

Atmospheric Pollutants	428			
Particulates	430	/	Carbon Oxides	431
Compounds	433	/	Nitrogen Oxides (NO _x)	435
Organic Compounds (Hydrocarbons)	436	/	Photochemical Smog	436
Atmospheric Controls on Air Pollution	437			
Effect of Winds on Horizontal Transport	437			
Effect of Atmospheric Stability	439			
Urban Heat Islands	440			
Radiation Effects	442	/	Changes in Heat Storage	444
Sensible and Latent Heat Transfer	445			
14-1 Focus on the Environment:	Severe Pollution Episodes		432	
14-2 Focus on the Environment:	The Counteroffensive on Air Pollution		438	
14-3 Focus on the Environment:	Smog in Southern California		442	

Part Six Current, Past, and Future Climates 450

15 Earth's Climates 452

Defining Climate	453			
The Koeppen System	454			
Tropical Climates	456			
Tropical Wet (Af)	457	/	Monsoonal (Am)	457
Tropical Wet and Dry (Aw)	460			

Dry Climates	461	
Subtropical Deserts (BWh)	461	/ Subtropical Steppe (BSh) 463
Midlatitude Deserts (BWk)	463	/ Midlatitude Steppe (BSk) 464
Mild Midlatitude Climates	464	
Mediterranean (Csa, Csb)	465	/ Humid Subtropical (Cfa, Cwa) 466
Marine West Coast (Cfb, Cfc)	466	
Severe Midlatitude Climates	467	
Humid Continental (Dfa, Dfb, Dwa, Dwb)	468	/ Subarctic (Dfc, Dfd, Dwc, Dwd) 468
Polar Climates	468	
Tundra (ET)	469	/ Ice Cap (EF) 470 / Highland Climates (H) 470
15-1 Special Interest:	Different Climate Classification Schemes for Different Purposes	458

16 Climate Changes: Past and Future 474

Defining Climate Change	475
The Time Scales of Climate Change	476
Past Climates	478
Warm Intervals and Ice Ages	478 / The Current Ice Age 479
The Last Glacial Maximum	481 / The Holocene 482
Millennial-Scale Oscillations	484
Factors Involved in Climatic Change	486
Variations in Solar Output	487 / Changes in Earth's Orbit 489
Changes in Land Configuration and Surface Characteristics	491
Changes in Atmospheric Turbidity	492 / Changes in Radiation-Absorbing Gases 494
Feedback Mechanisms	496
Ice-Albedo Feedback	497 / Evaporation of Water Vapor 497
Ocean-Atmosphere Interactions	497 / Atmosphere-Biota Interactions 499
General Circulation Models	501
Methods for Determining Past Climates	502
Oceanic Deposits	503 / Ice Cores 503 / Remnant Landforms 504 / Past Vegetation 505 / Relic Soils 506
16-1 Physical Principles:	Blaming Climate Change 477
16-2 Focus on the Environment:	Historic Warmth in the 1990s and Early 2000s 486
16-3 Focus on the Environment:	Plant Migrations and Global Change 500

Part Seven Special Topics and Appendices 510

17 Atmospheric Optics 512

Clear Air Effects 513

Refraction and the Setting or Rising Sun 513 / Mirages 514

Cloud and Precipitation Optics 516

Rainbows 516 / Halos, Sundogs, and Sun Pillars 518 / Coronas and Glories 520

Appendix A: Units of Measurement and Conversions 523

Appendix B: The Standard Atmosphere 524

Appendix C: Weather Map Symbols 525

Appendix D: Weather Extremes 531

Glossary 539

Credits 547

Index 549
