Contents

Preface *page* ix

1 Introduction **1**

1.1 What is network coding? 1
1.2 What is network coding good for? 2
1.2.1 Throughput 2
1.2.2 Robustness 5
1.2.3 Complexity 7
1.2.4 Security 8
1.3 Network model 8
1.4 Outline of book 11
1.5 Notes and further reading 12

2 Lossless Multicast Network Coding **13**

2.0 Notational conventions 13
2.1 Basic network model and multicast network coding problem formulation 13
2.2 Delay-free scalar linear network coding 14
2.3 Solvability and throughput 17
2.3.1 The unicast case 17
2.3.2 The multicast case 18
2.3.3 Multicasting from multiple source nodes 19
2.3.4 Maximum throughput advantage 19
2.4 Multicast network code construction 21
2.4.1 Centralized polynomial-time construction 21
2.4.2 Random linear network coding 23
2.5 Packet networks 27
2.5.1 Distributed random linear coding for packet networks 28
2.6 Networks with cycles and convolutional network coding 30

2.6.1 Algebraic representation of convolutional network coding 31
2.7 Correlated source processes 34
2.7.1 Joint source-network coding 35
2.7.2 Separation of source coding and network coding 37
2.8 Notes and further reading 37
2.A Appendix: Random network coding 39

3 Inter-Session Network Coding 49
3.1 Scalar and vector linear network coding 50
3.2 Fractional coding problem formulation 51
3.3 Insufficiency of linear network coding 52
3.4 Information theoretic approaches 54
3.4.1 Multiple unicast networks 58
3.5 Constructive approaches 58
3.5.1 Pairwise XOR coding in wireline networks 59
3.5.2 XOR coding in wireless networks 60
3.6 Notes and further reading 63

4 Network Coding in Lossy Networks 65
4.1 Random linear network coding 67
4.2 Coding theorems 68
4.2.1 Unicast connections 68
4.2.2 Multicast connections 82
4.3 Error exponents for Poisson traffic with i.i.d. losses 83
4.4 Notes and further reading 85

5 Subgraph Selection 86
5.1 Flow-based approaches 87
5.1.1 Intra-session coding 87
5.1.2 Computation-constrained coding 110
5.1.3 Inter-session coding 111
5.2 Queue-length-based approaches 114
5.2.1 Intra-session network coding for multiple multicast sessions 115
5.2.2 Inter-session coding 128
5.3 Notes and further reading 129

6 Security Against Adversarial Errors 130
6.0 Notational conventions 130
6.1 Error correction 131
6.1.1 Error correction bounds for centralized network coding 131

6.1.2 Distributed random network coding and polynomial-complexity error correction 142
6.2 Detection of adversarial errors 147
6.2.1 Model and problem formulation 148
6.2.2 Detection probability 150
6.3 Notes and further reading 151
6.A Appendix: Proof of results for adversarial error detection 152
