<i>Preface</i>	xvii	
Introduction: Letters illustrating clinical aspects of cancer • G. BARRY PIERCE		1
Colon cancer	2	
Breast cancer	4	
Acute leukemia	5	
Lung cancer	6	
Kidney cancer	7	
Squamous cell cancer	8	
Testicular cancer	9	
Stomach cancer	10	
Melanoma	11	
Neuroblastoma	12	
Summary	13	
1 The pathology of cancer • G. BARRY PIERCE		14
1.1 Introduction	14	
1.2 Benign versus malignant tumors	18	
1.2a Benign tumors	18	
1.2b Malignant tumors	21	
1.3 The diagnosis of benign and malignant tumors	24	
1.4 Tumor grading and staging	24	
1.5 Classification and nomenclature	25	
1.6 Metastasis	27	
1.7 Tumor markers	28	
1.8 How cancer kills	29	
1.8a Organ failure	29	
1.8b Obstruction of the gastrointestinal tract, ducts, and hollow organs	30	
1.8c Cachexia and infection	32	
1.9 Spontaneous regression	33	

1.10	Dormancy	34
1.11	Initiation, latency, promotion, and progression	35
1.12	Latency	35
1.13	Progression to the autonomous state	36
1.14	Selection and cellular heterogeneity	37
1.15	A developmental concept of cancer	39
1.16	Apoptosis	47
1.17	Summary	48
2	Metastasis • ROBERT G. MCKINNELL	50
2.1	Introduction	50
2.2	The metastatic cascade	53
2.2a	Disruption of the basement membrane	55
2.2b	Cell detachment	57
2.2c	Cell motility	60
2.2d	Invasion	62
2.2e	Penetration of the vascular system	65
2.2f	Cancer cells in the circulation	66
2.2g	Arrest of circulating cancer cells (stasis)	67
2.2h	Extravasation, growth of metastases, and metastasis of metastases	67
2.3	Are there genes that control metastasis?	68
2.4	Soil and seed hypothesis of Paget	71
2.5	Is metastasis limited to malignant cells?	71
2.6	How do we know a metastasis to the liver is not a primary neoplasm of the liver?	75
2.7	Why study metastasis?	77
2.8	Summary	78
3	Carcinogenesis • ALAN O. PERANTONI	79
3.1	Introduction	79
3.2	What is a carcinogen?	80
3.3	Carcinogenesis as a multistage process	80
3.4	Chemical carcinogenesis	82
3.4a	Organic compounds	86
3.4b	Inorganic compounds and asbestos	89
3.4c	Naturally occurring chemicals	92
3.5	Radiation	92
3.5a	Ultraviolet radiation	92
3.5b	Ionizing radiation	94
3.5c	Endogenous ionizing radiation	96
3.6	Radon	96

3.7	Viral carcinogenesis	98
3.8	Endogenous carcinogenesis	99
3.9	Metabolism of xenobiotics	101
3.9a	Host defenses	101
3.9b	Inducibility of xenobiotic metabolism	102
3.9c	Metabolic activation of chemical carcinogens	104
3.9d	Inactivation of chemical carcinogens	105
3.9e	Systemic distribution of chemical carcinogens	106
3.9f	Mechanisms for carcinogen suppression	106
3.10	Modulation of carcinogenesis	107
3.11	Tumor promotion	110
3.12	Tumor progression	111
3.13	Alternative pathways for carcinogenesis?	112
3.14	Federal regulations	112
3.15	Summary	114
4	Cancer genetics • ROBERT G. MCKINNELL	115
4.1	Introduction	115
4.2	Chromosomes and cancer	116
4.2a	Aneuploidy	116
4.2b	Euploidy does not preclude genetic change	117
4.2c	Cancers with chromosomal aberrations	121
4.3	Chromosome damage, mutation, and vulnerability to cancer	124
4.4	Hereditary cancers	125
4.4a	Retinoblastoma	125
4.4b	Wilms' tumor	126
4.4c	Hereditary conditions that increase cancer risk	127
4.5	Familial cancer syndromes	127
4.5a	Colon cancer	127
4.5b	Breast cancer	129
4.5c	Prostate cancer	131
4.6	Summary	131
4.7	A postscript concerning genetic services for familial cancer patients	132
5	Cancer-associated genes • ALAN O. PERANTONI	133
5.1	Introduction	133
5.2	What is an oncogene?	133

5.3	Proto-oncogenes function in signal transduction, cell cycle regulation, or differentiation	136
5.4	Genetic approaches to delineate proto-oncogene function	137
5.5	Classification of proto-oncogenes/oncogenes	139
5.5a	Growth factors and their receptors	139
5.5b	Nonreceptor tyrosine kinases	142
5.5c	GTP-binding proteins: <i>ras</i> activation	143
5.5d	Cytoplasmic serine/threonine kinases	143
5.5e	Negative regulation of <i>ras</i> signaling	145
5.5f	Nuclear signaling	145
5.5g	Transcriptional activation	145
5.6	Regulation of DNA synthesis and the cell cycle	147
5.7	Signal transduction in general	149
5.8	Mechanisms of oncogene activation	150
5.9	Carcinogens and oncogene activation	152
5.10	Oncogene cooperation	153
5.11	Normal cells suppress tumor growth	154
5.12	Suppressor genes	154
5.12a	The Rb locus	155
5.12b	<i>p53</i> suppressor gene	156
5.12c	Apoptosis and its role in growth regulation	157
5.12d	Other defined suppressors	159
5.13	Where pathology meets molecular biology	160
5.14	Summary	161
6	Cancer in nonhuman organisms • ROBERT G. MCKINNEL	162
6.1	Introduction	162
6.2	Plant tumors	164
6.3	Invertebrate animals	166
6.3a	<i>Drosophila melanogaster</i>	166
6.3b	Other invertebrates	167
6.4	Cancer in selected poikilothermic (cold-blooded) vertebrates	168
6.4a	Fish	168
6.4b	Amphibia	170
6.4c	Reptiles	176
6.5	Cancer in selected ectothermic (warm-blooded) vertebrates	176
6.5a	Birds	176
6.5b	Mammals	177
6.6	Summary	180

7 Epidemiology • ROBERT G. MCKINNELL **181**

7.1	Introduction	181
7.2	Cancer in fossil humans: A brief digression concerning paleopathology	186
7.3	Epidemiology of selected human cancers	187
7.3a	Lung cancer	187
7.3b	Breast cancer	189
7.3c	Skin cancer	192
7.3d	Prostate cancer	197
7.3e	Colorectal cancer	199
7.3f	Cervical cancer	201
7.3g	Hodgkin's disease	202
7.4	Occupational cancers	203
7.5	AIDS-related cancers	203
7.5a	Kaposi's sarcoma (KS)	203
7.5b	Other AIDS-related malignancies	204
7.6	Diet, nutrition, and cancer	204
7.6a	Dietary fiber and colorectal cancer	206
7.6b	Correlations between food substances and cancer prevalence: Significance	207
7.6c	Dietary fat	208
7.6d	Vitamin A (beta-carotene)	209
7.6e	Vitamin C (ascorbic acid)	210
7.6f	Vitamin E	210
7.6g	Selenium	210
7.6h	Non-nutrient compounds in food that may protect against cancer	211
7.6i	Alcohol	212
7.6j	American Cancer Society (1996) <i>Guidelines on Diet, Nutrition, and Cancer Prevention</i>	213
7.7	Exercise as it relates to cancer	213
7.8	Tobacco as a lifestyle hazard	215
7.9	Other lifestyle hazards	216
7.10	Summary	216

8 Cancer treatment • RALPH E. PARCHMENT **218**

8.1	Introduction	218
8.2	Eradicating cancer cells with conventional modalities: Surgery, radiotherapy, and chemotherapy	219
8.2a	Surgery as a cancer treatment	219
8.2b	Radiation therapy as a cancer treatment	220

8.2c	Cytotoxic chemotherapy as a cancer treatment	222
8.3	Cytoreduction theory and cancer "cure"	226
8.3a	Absolute versus fractional cytoreduction	226
8.3b	What is a cancer cure anyway?	228
8.3c	The success and failure of multimodality therapy	230
8.3d	Complicating factors that decrease log-cell kill	237
8.4	The evolution of treatment for intermediate-stage breast cancer	244
8.5	Summary	247
9	Biotherapy • RALPH E. PARCHMENT	250
9.1	Introduction	250
9.2	Targeting differentiation markers for delivery of cytotoxic agents	252
9.3	Trophic factors in tissue renewal and therapy	253
9.3a	Antagonism of trophic factors to decrease tumor mass	256
9.3b	Antagonism of steroid trophic factors	258
9.3c	Carcinoma of the prostate	258
9.3d	Carcinoma of the breast	259
9.3e	Carcinoma of the uterus	262
9.3f	Interferon-alpha: A protein antagonist of trophic factors in the immune system	262
9.3g	Interleukin-2 and tumor-reactive lymphocytes	263
9.3h	Corticosteroids	264
9.3i	Treating hematologic side effects of cytotoxic therapy with hematopoietic trophic factors	265
9.4	Differentiation therapy	265
9.4a	Retinoic acid for acute promyelocytic leukemia	267
9.5	Biotherapy with uncertain mechanism: BCG therapy for in situ bladder carcinoma	267
9.6	Future directions	268
9.7	Summary	269
	Appendix: Description of selected tumors • G. BARRY PIERCE	271
A.1	Adenocarcinoma of the breast	271
A.2	Adenocarcinoma of the prostate	274

A.3	Adenocarcinoma of the colon	275
A.4	Squamous cell carcinoma	276
A.5	Teratocarcinomas	280
A.6	Liver cell carcinoma	285
A.7	Lung cancer	287
A.8	Malignant melanoma	288
A.9	Retinoblastoma and neuroblastoma	290
A.10	Wilms' tumor (nephroblastoma)	290
A.11	Sarcomas	293
	A.11a Fibrosarcoma	294
	A.11b Liposarcoma	294
	A.11c Chondrosarcoma	294
	A.11d Leiomyosarcoma	294
	A.11e Osteosarcoma	294
A.12	Leukemia	296
A.13	Hodgkin's disease	297
	<i>Glossary</i>	299
	<i>References</i>	311
	<i>Index</i>	373
