Preface *xiii*

1 Capillary Electrophoresis–Mass Spectrometry Interfacing: Principles and Recent Developments 1

Lukas Naumann, Jasmin Schairer, Alisa Höchsmann, Elahe Naghdi, and Christian Neusüß

- 1.1 Introduction 1
- 1.2 General Considerations of CE–ESI–MS 2
 - 1.2.1 Electrospray Ionization 3
 - 1.2.2 Electrical Circuit in CE–ESI–MS 4
 - 1.2.3 CE Modes and Conditions in CE–MS 5
- 1.3 Sheath Liquid Interfaces 5
 - 1.3.1 Coaxial Sheath-Flow ESI–MS Interface 6
 - 1.3.2 Nanoflow Sheath Liquid ESI–MS Interface 9
- 1.4 Sheathless Interfaces 14
 - 1.4.1 Porous-Tip Interface 15
 - 1.4.2 Other Sheathless Interfaces 17
- 1.5 Other CE–ESI–MS Interfaces 19
 - 1.5.1 Liquid Junction 19
 - 1.5.2 Interface-Free CE–MS 21
- 1.6 Microchip Electrophoresis–MS Interfaces 22
- 1.7 Alternative Ionization Techniques for CE–MS 26
 - 1.7.1 CE and MCE Combined with MALDI–MS 26
 - 1.7.2 CE–ICP–MS 27
- 1.8 Concluding Remarks and Outlook 27
- List of Abbreviations 28
- References 28

2 Data Analysis Strategies in CE–MS for Metabolomics 35

Nicolas Drouin, Julien Boccard, Serge Rudaz, and Víctor González-Ruiz

- 2.1 Introduction 35
- 2.2 The Annotation Challenge in CE–MS-Based Untargeted Metabolomics 36

2.2.1	Peak Picking in CE-MS Metabolomics	37
2.2.2	Alignment Approaches	38
2.2.3	μ_{eff} Transformation	39
2.2.3.1	Historical Evolution and Current State	39
2.2.3.2	Quantitative Aspects of the Use of Mobilograms	43
2.2.3.3	Technical Considerations of the μ_{eff} Transformation	45
2.2.4	Reproducibility and Exchange of μ_{eff} Information Using Libraries	46
2.2.5	Interlaboratory Reproducibility	49
2.2.6	ROMANCE	51
2.2.7	Ion Mobility	51
2.3	Data Pretreatment	53
2.3.1	Area Normalization	54
2.3.2	Analytical Quality Monitoring	54
2.3.3	Data Filtering	55
2.4	Data Treatment	56
2.5	Concluding Remarks	58
	Acknowledgment	58
	References	59
3	Data-Processing Workflow for Relative Quantification from Label-Free and Isobaric Labeling-Based Untargeted Shotgun Proteomics: From Database Search to Differential Expression Analysis	65
	<i>Jenny J. Zhong, Gregg B. Morin, and David D. Y. Chen</i>	
3.1	Introduction	65
3.2	Spectra Acquisition and Database Search	68
3.2.1	Parameters Affecting Sequence Database Search	69
3.2.1.1	Database Selection	73
3.2.1.2	Enzyme Specificity and Missed Cleavages	74
3.2.1.3	Posttranslational Modifications	77
3.2.1.4	Precursor Mass Tolerance	77
3.2.2	Target-Decoy Search Strategy for False Discovery Rate Estimation	81
3.2.3	Database Search Engines	83
3.2.3.1	SEQUEST	83
3.2.3.2	Mascot	85
3.2.3.3	Multiple Search Engines	85
3.2.4	Protein Inference	86
3.3	Relative Protein Quantification	87
3.3.1	Filtering	87
3.3.2	Missing Value Imputation	87
3.3.2.1	Imputation Methods	92
3.3.2.2	Comparative Studies	93
3.3.2.3	Normalization	99

3.3.3	Summarization	104
3.3.4	Differential Expression Analysis	104
3.4	Conclusions	107
	References	108
4	Data Processing in Metabolomics Capillary Electrophoresis–Mass Spectrometry	121
	<i>Jiahua Tan, Zi-Ao Huang, Gregg B. Morin, and David D. Y. Chen</i>	
4.1	Data Extraction and the Interpretation of the Extracted Data	121
4.2	Data Preprocessing	123
4.2.1	Handling Missing Values	124
4.2.2	Normalization	124
4.2.3	Transformation	127
4.2.4	Scaling	127
4.3	Statistical Analysis	128
4.3.1	Two-Sample <i>T</i> -Test	128
4.3.2	Principal Component Analysis (PCA)	130
4.3.3	Partial Least-Squares Discriminant Analysis (PLS–DA)	132
4.3.4	Support Vector Machine	132
4.3.5	Logistic Regression	136
4.3.6	Random Forest Model	137
4.3.7	Evaluation of Classification Models	138
4.4	Metabolite Identification	142
	References	142
5	Utility and Advances of Capillary Electrophoresis–Mass Spectrometry for Metabolomics	147
	<i>Wei Zhang and Rawi Ramautar</i>	
5.1	Introduction	147
5.2	Technological Developments	148
5.2.1	Improving Sensitivity	148
5.2.2	Increasing Metabolome Coverage	158
5.2.3	Increasing Annotation Capacity	158
5.2.4	Tackling Anionic Profiling	160
5.2.5	Increasing Sample Throughput	162
5.3	Applications	163
5.3.1	Biomedical Samples	163
5.3.2	Microbial Extracts	167
5.3.3	Plants	169
5.4	Concluding Remarks	171
	Acknowledgment	171
	Conflict of Interest	172
	References	172

6	Comprehensive Lipid Profiling by Multisegment Injection–Nonaqueous Capillary Electrophoresis–Mass Spectrometry: Expanding Coverage Beyond Hydrophilic Metabolites	179
	<i>Ritchie Ly, Sandi M. Azab, Meera Shanmuganathan, and Philip Britz-McKibbin</i>	
6.1	The Early Origins of Lipidomics	179
6.2	Major Instrumental Platforms in Lipidomics: The Role of Separation Science	180
6.3	NACE–MS: An Emerging Separation Platform for Lipidomics?	181
6.4	Multiplexed Separations for Fatty Acids by MSI–NACE–MS	181
6.5	Comprehensive Lipid Profiling Strategies by MSI–NACE–MS	186
6.6	Future Perspectives and Summary	188
	References	189
 7	 Strategies for Identification of Modified Amino Acids with CE–MS in Metabolomics	 195
	<i>Paula Cuevas-Delgado, Ana Gradillas, and Coral Barbas</i>	
7.1	Introduction	195
7.1.1	Post-Translational Modifications and Modified Amino Acids	195
7.1.2	Modified Amino Acids as Biomarkers of Pathologies	197
7.2	Methods for the Detection of Modified Amino Acids	198
7.3	Capillary Electrophoresis Coupled to Mass Spectrometry to Analyze Modified Amino Acids	203
7.3.1	Applications of CE–MS for Analysis of Modified Amino Acids	205
7.4	Recent Developments to Enhance and Facilitate the Annotation Process in CE–MS	208
	Acknowledgments	212
	References	212
 8	 CE–MS Approaches for Single-Cell Metabolomics	 221
	<i>Takayuki Kawai</i>	
8.1	Introduction	221
8.2	Techniques for Single-Cell Metabolome Analysis	222
8.2.1	Highly Sensitive CE–MS Interfacing	222
8.2.2	Online Sample Preconcentration Techniques	223
8.2.3	Isolation of Single Cells	224
8.3	Application to Single-Cell Metabolome Analysis	225
8.3.1	Metabolome Analysis of Large Single Cells with Highly Sensitive Interface	225
8.3.2	Single-Cell Metabolome Analysis with Highly Sensitive Interface and OSP Method	226
8.3.3	Single-Cell Metabolome Analysis by Online Sampling and Highly Sensitive Interface	229

8.4	Conclusions	230
	References	230
9	CE-MS Approaches for Peptidomics	235
	<i>Sille Štěpánová and Václav Kašička</i>	
9.1	Introduction	235
9.2	Sample Preparation	238
9.3	CE-MS	240
9.3.1	Basic Characterization	240
9.3.2	Peptide Identification	242
9.3.3	Peptide Quantitation	244
9.4	Applications	245
9.4.1	Search, Identification, and Determination of Biomarkers	245
9.4.2	Food Peptidomics	248
9.4.3	Other Applications	249
9.5	Conclusions	250
	Acknowledgments	250
	List of Abbreviations	251
	References	251
10	Capillary Zone Electrophoresis–Mass Spectrometry for Top-Down Proteomics: Technological Development and Biological Applications	261
	<i>Liangliang Sun</i>	
10.1	Introduction	261
10.2	Technological Development	263
10.2.1	CE-MS Interface	263
10.2.2	Capillary Coating	264
10.2.3	Sample Loading Capacity and Separation Window	265
10.2.4	Coupling Novel Gas-Phase Fragmentation Techniques to CZE-MS/MS for TDP	267
10.2.5	Electrophoretic Mobility Prediction of Proteoforms	268
10.3	Applications of CZE-MS-Based TDP	269
10.3.1	Delineation of Proteoforms of Complex Proteomes, Disease Biomarkers, and Biopharmaceuticals	269
10.3.2	CZE-MS for Native TDP	270
10.4	Conclusions and Perspectives	272
	Acknowledgments	272
	References	272
11	CE-MS Methods for the Characterization of Monoclonal Antibodies	281
	<i>Tessa Reinert, Alain Beck, Pascal Houzé, Rabah Gahoual, and Yannis Francois</i>	
11.1	Introduction	281
11.2	mAb Characterization Approaches	283

11.3	Applications	288
11.3.1	Primary Structure Characterization of Monoclonal Antibodies	288
11.3.1.1	Analytical Workflow	288
11.3.1.2	Amino Acid Sequence Characterization Using CE-MS(/MS)	290
11.3.1.3	PTMs Characterization and Relative Quantification Using CE-MS(/MS)	291
11.3.1.4	Glycosylation Determination Using CE-MS(/MS)	294
11.3.2	Middle-Up/Middle-Down Analysis	296
11.3.2.1	Analytical Workflow	296
11.3.2.2	mAb Analysis Using Middle-Up Strategy	298
11.3.2.3	mAb Analysis Using Middle-Down Strategy	299
11.3.3	Intact Analysis	299
11.3.3.1	Analytical Workflow	300
11.3.3.2	mAb Analysis in Denaturing Conditions Using CE-MS	300
11.3.3.3	mAb Analysis in Native Conditions Using CE-MS	301
11.3.4	Automation: Future of CE-MS for mAb Analysis	302
11.4	Conclusion	304
	References	305
