

'Space After Deleuze is a welcome invitation to rethink the very notion of "space". Arun Saldanha introduces students of space – geographers, architects and planners – to the geophilosophy of Deleuze and Guattari that is fundamental to this task. The book bravely turns a Deleuzian conception of the "dynamic thickness" of space toward the most pressing social, political and (always) geographic issues of our age.'

Chris L. Smith, Associate Professor, Faculty of Architecture, Design and Planning, University of Sydney, Australia

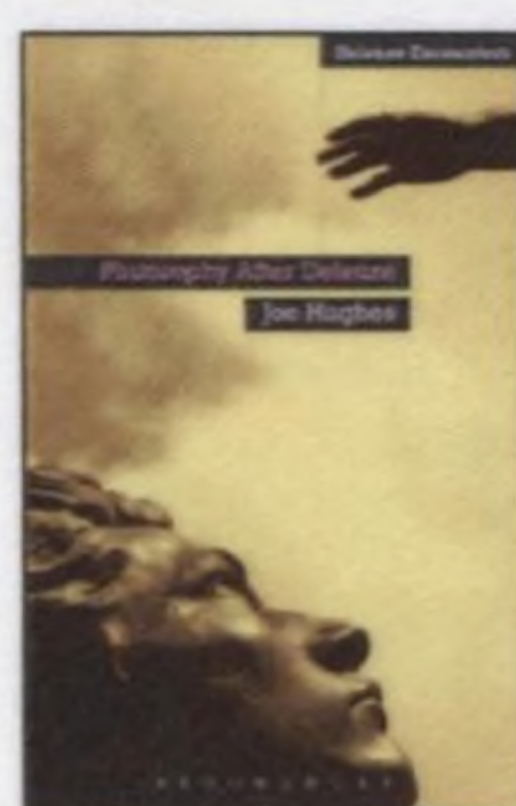

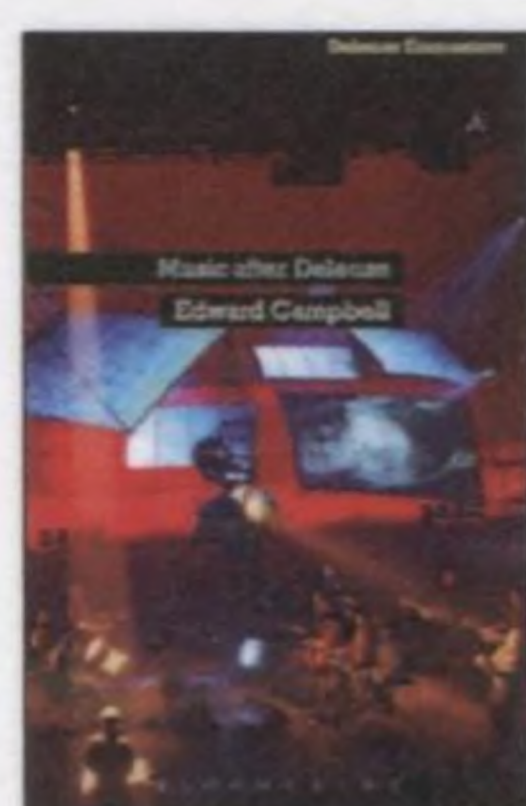

Deleuze's fondness for geography has long been recognized as central to his thought. This is the first book to introduce researchers to the breadth of his engagements with space, place and movement. Focusing on pressing global issues such as urbanization, war, migration and climate change, Arun Saldanha presents a detailed Deleuzian rejoinder to a number of theoretical and political questions about globalization in a variety of disciplines. This systematic overview of moments in Deleuze's corpus, where space is implicitly or explicitly theorized, shows why he can be called one of the twentieth century's most imaginative thinkers of space.

Space After Deleuze makes clear how Deleuze and thinkers close to him (Guattari, Foucault, Marx and Darwin) allow for a robust and politically engaged framework for studying spatial phenomena. Anyone with an interest in refining a wide range of concepts - from territory and assemblage, to body, event and the Anthropocene - will learn much from the 'geophilosophy' of Deleuze.

Arun Saldanha is Associate Professor at the Department of Geography, Environment and Society at the University of Minnesota, USA.
