<b>Preface</b>	<b>5</b>
<b>1 Methods for measurement of basic physical properties</b>	<b>7</b>
1.1 Temperature	7
1.1.1 Platinum resistance thermometers	7
1.1.2 Thermocouples	7
1.1.3 Combined sensors	19
1.2 Moisture content	28
1.2.1 Time domain reflectometry method	28
1.2.2 Capacitance method	53
1.2.3 Gravimetric method	61
1.3 Relative humidity	62
1.3.1 Sensors for measurement in open space	62
1.3.2 Sensors for measurement inside a building material	63
1.4 Capillary pressure	72
1.4.1 Methods for determination of capillary pressures lower than 100 kPa	72
1.4.2 Methods for determination of capillary pressures higher than 100 kPa	74
1.4.3 Applications	74
1.5 Ion concentration	74
1.5.1 Potentiometry	74
1.5.2 Liquid chromatography	78
1.5.3 Time Domain Reflectometry	82
1.5.4 Infrared spectroscopy	85
1.6 Length changes	91
1.6.1 Contact dilatometry	91
1.6.2 Optical dilatometry	104

1.7	Bulk density, matrix density and open porosity	113
1.7.1	Vacuum water saturation method	113
1.7.2	Helium pycnometry	117
1.7.3	Mercury intrusion porosimetry	123
1.8	Pore size distribution	125
1.8.1	Mercury intrusion porosimetry	125
1.8.2	Gas adsorption porosimetry	132
<b>2</b>	<b>Methods for measurement of mechanical properties</b>	<b>147</b>
2.1	Elastic parameters	147
2.1.1	Static methods	147
2.1.2	Dynamic methods	163
2.2	Other parameters	185
2.2.1	Schmidt rebound hammer test	185
2.2.2	Methods for determination of material damping	186
<b>3</b>	<b>Methods for measurement of thermal properties</b>	<b>203</b>
3.1	Heat transport parameters	203
3.1.1	Pulse method	203
3.1.2	Guarded hot plate method	216
3.1.3	Transient method for determination of apparent thermal conductivity	218
3.2	Heat storage parameters	228
3.2.1	Pulse method	228
3.2.2	Mixing method	233
3.2.3	Nonadiabatic method for high-temperature measurements	233
3.3	Hydration heat	239
3.3.1	Methods based on commercial calorimeters	239
3.3.2	Methods based on calorimeters for scientific use	240
<b>4</b>	<b>Methods for measurement of hygric properties</b>	<b>279</b>
4.1	Water vapor transport parameters	279
4.1.1	Cup method	279

4.1.2	Fast transient method	284
4.1.3	Transient method based on the inverse analysis of relative humidity profiles	291
4.2	Water transport parameters	303
4.2.1	Water absorption coefficient	303
4.2.2	Moisture diffusivity	317
4.2.3	Water permeability	335
4.3	Water vapor storage parameters	342
4.3.1	Desiccator method	342
4.3.2	Dynamic vapor sorption method	349
4.4	Water storage parameters	360
4.4.1	Pressure plate method	360
4.4.2	Mercury intrusion porosimetry	367
<b>5</b>	<b>Methods for measurement of salt solution properties</b>	<b>377</b>
5.1	Salt solution transport parameters	377
5.1.1	Free salt-solution intake experiment	377
5.1.2	Combined transient method for determination of moisture diffusivity and salt diffusion coefficient	377
5.2	Salt storage parameters	396
5.2.1	Modified adsorption method for determination of ion binding isotherms	396
<b>6</b>	<b>Methods for constructing semi-scale experiment</b>	<b>407</b>
6.1	Experimental setup	407
6.2	Applications	419
<b>7</b>	<b>Methods for computational modeling of transport phenomena</b>	<b>437</b>
7.1	Heat and moisture transport	437
7.1.1	Description of the computer simulation tool HEMOT	437
7.1.2	Applications	446
7.2	Moisture and salt transport	478
7.2.1	Description of the computer simulation tool TRANSMAT-S	478
7.2.2	Applications	479

7.3	Heat, moisture and salt transport	485
7.3.1	Description of the computer simulation tool HEMOT-S	485
7.3.2	Applications	487
7.4	Stress and strain analysis	499
7.4.1	Description of the computer simulation tool HEMOT-M	500
7.4.2	Applications	502
