

Contents

1 Definition of the field and introduction to history (<i>O. Slabý</i>)	8
1.1 Organization of living systems and field definition	8
1.2 Introduction to the history of the field	9
2 The chemical nature of life (<i>L. Eiselleová, O. Slabý</i>)	15
2.1 Atoms, molecules and chemical bonds	15
2.2 Basic types of chemical bonds in biomolecules	17
2.3 Biogenic elements	19
2.4 Water	20
2.5 Hydrophilic and hydrophobic molecules	21
2.6 Biopolymers	22
2.6.1 Carbohydrates	23
2.6.2 Fatty acids and lipids	25
2.6.3 Nucleic acids	26
2.6.4 Proteins	26
3 Proteins and their functions (<i>L. Eiselleová, O. Slabý</i>)	27
3.1 Structure of proteins	27
3.1.1 Amino acids	27
3.1.2 Primary structure of proteins and peptide binding	29
3.1.3 Secondary structure	29
3.1.4 Tertiary structure	31
3.1.5 Quaternary structure	31
3.2 Functions of proteins	33
3.2.1 Proteins as structural components of cells and tissues	33
3.2.2 Proteins as catalysts for chemical reactions – enzymes	33
3.2.3 Proteins as signaling molecules and signaling mediators	35
3.2.4 Proteins and their importance in the immune system	35
3.2.5 Proteins as infectious agents – prions	36
4 Functional anatomy of eukaryotic cell (<i>K. Cetkovská</i>)	39
4.1 Comparison of eukaryotic and prokaryotic cell anatomy	39
4.2 The membrane system of the cell	43
4.2.1 Composition and properties of membranes	43
4.2.2 Membrane proteins	47
4.2.3 Transfer of substances across membranes	48
4.3 Architecture and function of membrane organelles	51
4.3.1 Nucleus	51
4.3.2 Intracellular compartments and vesicular transport – endoplasmic reticulum, Golgi apparatus, lysosomes, endosomes	52

4.3.3 Mitochondria	57
4.3.4 Organelle specificity of different cell types	59
4.4 Cytoskeletal system of the cell	59
4.4.1 Intermediate filaments	60
4.4.2 Microtubules	62
4.4.3 Actin filaments (microfilaments)	65
5 DNA structure and genome organization (<i>J. Šána, O. Slabý</i>)	70
5.1 Primary structure of nucleic acids	72
5.2 Secondary structure of DNA	73
5.2.1 Conformation of the DNA molecule	74
5.2.2 Other non-canonical structures of the DNA molecule	75
5.3 Tertiary structure of DNA	76
5.4 Organization of the prokaryotic genome	77
5.5 Organization of the eukaryotic genome	79
5.5.1 Histone modifications and chromatin remodeling complexes	80
5.5.2 Metaphase chromosome structure and human karyotype	83
6 DNA replication (<i>O. Slabý</i>)	86
6.1 General aspects of DNA replication	86
6.2 Function of DNA-polymerases	88
6.3 Asymmetric replication forks	89
6.4 Replication apparatus	91
6.5 Specificity of the replication apparatus in prokaryotes	93
6.6 Specificity of the replication apparatus in eukaryotes	93
7 Transcription (<i>O. Slabý</i>).	97
7.1 Central dogma of molecular biology	97
7.2 Ribonucleic acid (RNA) and its basic types	97
7.3 General principles of transcription	99
7.4 Transcription in prokaryotes	101
7.5 Transcription in eukaryotes	103
7.6 Splicing of heterogeneous nuclear RNA	106
7.7 Post-transcriptional modifications of pre-rRNA and pre-tRNA	110
7.8 RNA editing	111
7.9 Reverse transcription	112
8 Translation and genetic code (<i>O. Slabý</i>)	114
8.1 Genetic code	114
8.2 Transfer RNA	117
8.3 Ribosomes	119
8.4 Process of translation	120
8.5 Protein degradation	123
8.6 Protein folding	124
8.7 Post-translational modification of proteins	126
9 Regulation of gene expression (<i>O. Slabý</i>).	130
9.1 General aspects of gene expression regulation	130
9.2 Regulation of gene expression in prokaryotes	131
9.3 Regulation of gene expression in eukaryotes	133

9.3.1	Regulation of expression at the level of transcription	134
9.3.2	Regulation of expression at the post-transcriptional level	138
9.3.3	Translational and post-translational regulation of gene expression	141
10	Human genome (O. Slabý)	143
10.1	Human Genome Project	143
10.2	Information content of the human genome	144
10.3	Organization of the human genome	145
10.4	Genes and gene families	145
10.5	Tandem repetitive sequences	147
10.6	Dispersed repetitive sequences – mobile genetic elements	149
10.7	The human mitochondrial genome	152
11	Genome instability, dna damage and repair (O. Slabý)	155
11.1	Biological significance of genomic instability and basic types of mutations	155
11.2	Gene mutations	156
11.3	Mutations caused by errors in DNA replication	157
11.4	Spontaneous mutations caused by base modifications	158
11.5	Induced mutations – chemical mutagens	160
11.6	Induced mutations – physical mutagens	162
11.7	Induced mutations – biological mutagens	163
11.8	DNA repair systems	164
11.8.1	Direct repair	164
11.8.2	Mismatch repair	164
11.8.3	Base excision repair	166
11.8.4	Nucleotide excision repair	167
11.8.5	Repair of DNA double-strand breaks	168
11.8.6	DNA damage tolerance	169
12	Cellular communication (O. Slabý)	171
12.1	General principles of cell signaling	171
12.2	Intracellular receptors	174
12.3	Membrane receptors	175
12.3.1	Ion channel coupled receptors	176
12.3.2	G-protein coupled receptors	178
12.3.3	Receptors with enzymatic activity	181
12.3.4	Mutual interactions of signaling pathways (cross-talk)	185
13	Cell cycle (S. Uldrijan)	186
13.1	Cell cycle phases	186
13.2	Cyclin – CDK complexes	187
13.3	Regulation of cyclin levels during the cell cycle	189
13.4	Cell cycle checkpoints	190
13.5	CDK inhibitors	190
13.6	The Rb protein and cell cycle regulation by signals from the cell external environment	192
13.7	The p53 protein and cell cycle regulation in response to DNA damage	194
13.8	Disrupted cell cycle control in cancer cells	195

14 Cell division (<i>I. Slaninová</i>)	197
14.1 Mitosis	197
14.1.1 Preparation for mitosis	197
14.1.2 The main molecular mechanisms controlling M-phase	198
14.1.3 The course of mitosis	199
14.1.4 Aurora kinases	203
14.1.5 Mitosis failures	204
14.2 Meiosis	204
14.2.1 The course of meiosis	205
14.2.2 Gametogenesis	208
14.2.3 The importance of meiosis	209
14.2.4 Meiosis failures	210
15 Cell death (<i>I. Slaninová</i>)	216
15.1 Basic types of cell death	216
15.2 Programmed cell death – apoptosis	218
15.3 Apoptosis as a physiological process	218
15.4 The course of apoptosis	219
15.5 Characteristic features of apoptosis	219
15.6 Discovery of apoptosis	220
15.7 Apoptosis signaling pathways and their regulation	221
15.8 The extrinsic pathway	222
15.9 The intrinsic (mitochondrial) pathway	222
15.10 Regulation of apoptosis by Bcl-2 family proteins	223
15.11 Caspases - the main executors of apoptosis	225
15.12 P53 and apoptosis	226
15.13 Regulation of apoptosis	226
16 Cells and tissues (<i>K. Cetkovská</i>)	230
16.1 Connective tissues and the extracellular matrix	231
16.1.1 Collagens	232
16.1.2 Elastins	233
16.1.3 Proteoglycans and glycosaminoglycans – gels of polysaccharides and proteins	234
16.1.4 Adhesive glycoproteins	235
16.1.5 Basal lamina	237
16.1.6 Extracellular matrix formation and degradation	239
16.2 Epithelia and intercellular junctions	240
16.2.1 Polarization of epithelia	240
16.2.2 Tight junctions	242
16.2.3 Adhesion (adherens) junctions	244
16.2.4 Desmosomes and hemidesmosomes	245
16.2.5 Gap junctions	246
16.3 Cell adhesion molecules	247
16.3.1 Cadherins and formation of epithelia	247
16.3.2 Integrins and anchoring of cells to the matrix	249
16.3.3 Selectins and transient intercellular interactions	249
16.3.4 Proteins of the immunoglobulin superfamily	250

17	Biologie virů (L. Bešše)	251
17.1	Classification of viruses	251
17.2	Virus structure	252
17.2.1	Virus genome	253
17.2.2	Viral capsid	255
17.2.3	Viral envelope	255
17.3	Virus life cycle	255
17.3.1	Adsorption	256
17.3.2	Entry	257
17.3.3	Genome replication and gene expression	259
17.3.4	Assembly/packaging and maturation	261
17.3.5	Release of virion from the cell	262
17.3.6	Lytic and lysogenic life cycle in viruses	263
17.4	Interaction of animal viruses with the host	264
17.4.1	Acute infections	264
17.4.2	Persistent infections	264
17.4.3	Latent infections	264
17.5	The importance of viruses in medicine	264
