

TABLE OF CONTENTS

Professional characteristics	4
1. Introduction	5
2. Fabrication of diamond layers	6
3. Assembly of cellular micro-arrays on diamond	8
3.1. Atomic micro-patterning of diamond surfaces	8
3.2. Preferential cell growth on H/O micro-patterns	8
4. Investigating influence of proteins	10
4.1. Morphology of protein layers on H/O-diamond	10
4.2. Adhesion and composition of protein layers on diamond	11
5. Recognizing molecular physisorption and chemisorption	13
5.1. AFM nanoshaving and KFM on DNA-diamond interface	13
5.2. Protein-diamond interface	15
5.3. PPy-diamond heterojunction	17
5.4. AFM nanoshaving and SEM	18
6. Electronic effects at diamond-protein-cell interface	19
6.1. Solution-gated diamond field-effect transistors	19
6.2. Role of grain boundaries in diamond SG-FET	20
7. Discussion of diamond-protein-cell interactions	21
8. Conclusions	24
9. Acknowledgements	25
10. Abstract	25
11. References	26
