## Part 1 Introduction 1

### 1 Sensory Ecology, Information, and Decision-Making 3

1.1 What is Sensory Ecology?	3
1.2 Many Animals Detect and Use Sensory Information Humans Cannot Perceive	4
1.3 Asking Questions about Behaviour	7
1.4 Information	12
1.5 Future Directions	17
1.6 Summary	17
1.7 Further Reading	17

---

## Part 2 Sensory Processing 19

### 2 Sensing the World 21

2.1 Signal Detection	21
2.2 Chemical	22
2.3 Electricity	24
2.4 Light	27
2.5 Magnetic	32
2.6 Mechanical	35
2.7 Sound	36
2.8 Future Directions	39
2.9 Summary	39
2.10 Further Reading	39

### 3 Encoding Information 40

3.1 Contrast and Receptive Fields in Vision	41
3.2 Sound Localization in Barn Owls	45

- 3.3 Echolocation
- 3.4 Olfactory Processing
- 3.5 Common Principles across Species and Modalities
- 3.6 Future Directions
- 3.7 Summary
- 3.8 Further Reading

#### **4 Sensory Systems: Trade-Offs, Costs, and Sensory Integration**

- 4.1 Energetic Costs of Sensory Systems
- 4.2 When Are Sensory Systems Optimized for One Task Rather than Being Generalized for Many?
- 4.3 Trade-Offs in Processing Different Components of Stimuli
- 4.4 Integrating the Senses
- 4.5 Future Directions
- 4.6 Summary
- 4.7 Further Reading

---

### **Part 3 Communication**

#### **5 Signalling and Communication**

- 5.1 Signals and Cues
- 5.2 Signal Components
- 5.3 Strategic and Efficacy Costs of Signals
- 5.4 What is Communication?
- 5.5 There is More to Communication than Just Sensory Systems
- 5.6 Future Directions
- 5.7 Summary
- 5.8 Further Reading

#### **6 Multimodal Signals and Communication**

- 6.1 Multimodal, Multicomponent, and Complex Signals
- 6.2 What Advantages do Multimodal Signals Provide?
- 6.3 A Framework for Multimodal Signals Based on Influence?
- 6.4 Examples of Multimodal Communication
- 6.5 True Multimodality or Multiple Receivers?
- 6.6 Future Directions
- 6.7 Summary
- 6.8 Further Reading

7.4 Multiple Functions and Trade-Offs in Signal Form	116
7.5 Future Directions	118
7.6 Summary	118
7.7 Further Reading	119
<b>8 Deception, Mimicry, and Sensory Exploitation</b>	<b>120</b>
8.1 Exploitation and Biases	120
8.2 Supernormal Stimuli	127
8.3 Anti-Predator Defences: Mimicry and Exploitation	127
8.4 Foraging and Prey Capture	129
8.5 Aggressive Mimicry	134
8.6 Sensory Exploitation by Brood Parasites	136
8.7 Future Directions	140
8.8 Summary	140
8.9 Further Reading	140
 <b>Part 4 Diversification and Divergence</b>	 <b>141</b>
<b>9 Arms Races, Coevolution, and Diversification</b>	<b>143</b>
9.1 Arms Races and Coevolution	144
9.2 Predators and Prey	145
9.3 Brood Parasites	156
9.4 Future Directions	163
9.5 Summary	163
9.6 Further Reading	163
<b>10 Adapting to the Environment</b>	<b>164</b>
10.1 Signal Transmission and the Environment	165
10.2 Signal Form Under Different Environments	168
10.3 Sensory Plasticity and the Environment	170
10.4 Tuning of Sensory Systems to Habitats	171
10.5 Coping with Environmental Noise	174
10.6 Future Directions	177
10.7 Summary	178
10.8 Further Reading	178
<b>11 Divergence, Sensory Drive, and Speciation</b>	<b>179</b>
11.1 Divergence and the Environment	180
11.2 Elaboration versus Innovation	182
11.3 Examples of Divergence and Speciation	184
11.4 Sensory Drive and Speciation	194
11.5 Future Work	199
11.6 Summary	199
11.7 Further Reading	200

**Part 5 Conclusions****201****12 Concluding Remarks****203**

12.1 Information is a Concept Linked to the Receiver's Sensory System

203

12.2 Communication

204

12.3 Life's Diversity

205

12.4 How Best Can Sensory Ecology Develop from Here?

205
