Chapter 1	<u>Incidence of Running-Related Injuries</u>	1
	Defining an Overuse Injury.....	2
	Etiology of Overuse Injuries in Runners.....	2
	Common Running-Related Injuries.....	4
	Understanding Clinical and Biomechanical Risk Factors	7
	Summary	8
Chapter 2	<u>Assessing Foot Mechanics</u>	9
	Biomechanics	10
	Atypical Foot Mechanics and Injury	15
	Strength	16
	Anatomical Alignment.....	18
	Flexibility	20
	Summary	22
Chapter 3	<u>Footwear Selection</u>	23
	Overview of Running Shoes.....	24
	Footwear Research Findings	26
	Shoe Fitting	28
	Barefoot Running.....	31
	Orthotic Devices and Foot Mechanics	33
	Summary	35
Chapter 4	<u>Assessing Knee Mechanics</u>	37
	Biomechanics	38
	Strength	41
	Anatomical Alignment.....	44
	Flexibility	47
	Summary	48

Chapter 5

Assessing Hip Mechanics

49

Biomechanics

50

Strength

52

Anatomical Alignment

54

Flexibility

56

Summary

61

Chapter 6

Proximal to Distal Relationships:
Case Studies

63

Torsional Forces

64

Frontal Plane Mechanics

72

Summary

84

Chapter 7

Can We Influence Gait Mechanics?

85

Feedback

86

Strength Training

88

Revisiting the Case Studies

88

Summary

89

Chapter 8

Overview of Clinical and Biomechanical
Assessment

91

Foot, Ankle, and Tibia

92

Knee

94

Hip

96

Summary

98

Chapter 9

Technical Aspects of Video Gait Analysis

99

Sampling Frequency

100

F-Stop and Shutter Speed

102

Software Options

103

Summary

103

Afterword 105

Appendix: Terminology for Gait Biomechanics 107

Glossary 111

References 117

Index 131

About the Authors 139
