

# CONTENTS

<i>Foreword</i>	ix
<b>1 Introduction</b>	<b>1</b>
1.1 <i>The Singularity</i>	1
1.2 <i>Approach</i>	3
1.3 <i>Limits to the modelling of animate nature</i>	7
1.4 <i>The AI hype cycle</i>	9
1.5 <i>Why machines will not inherit the earth</i>	11
1.6 <i>How to read this book</i>	18
<b>PART I</b>	
<b>Properties of the human mind</b>	<b>21</b>
<b>2 The human mind</b>	<b>23</b>
2.1 <i>Basic characteristics of the human mind</i>	23
2.2 <i>The mind-body problem: monism and its varieties</i>	24
<b>3 Human and machine intelligence</b>	<b>37</b>
3.1 <i>Capabilities and dispositions</i>	37
3.2 <i>Intelligence</i>	41
3.3 <i>AI and human intelligence</i>	48

4	The nature of human language	63
4.1	<i>Why conversation matters</i>	63
4.2	<i>Aspects of human language</i>	64
5	The variance and complexity of human language	74
5.1	<i>Conversations: an overview</i>	74
5.2	<i>Levels of language production and interpretation</i>	77
5.3	<i>Conversation contexts</i>	77
5.4	<i>Discourse economy: implicit meaning</i>	82
5.5	<i>Structural elements of conversation</i>	85
5.6	<i>How humans pass the Turing test</i>	88
6	Social and ethical behaviour	90
6.1	<i>Can we engineer social capabilities?</i>	91
6.2	<i>Intersubjectivity</i>	93
6.3	<i>Social norms</i>	95
6.4	<i>Moral norms</i>	98
6.5	<i>Power</i>	106
<b>PART II</b>		
	<b>The limits of mathematical models</b>	<b>107</b>
7	Complex systems	109
7.1	<i>Models</i>	109
7.2	<i>Computability</i>	115
7.3	<i>Systems</i>	117
7.4	<i>The scope of extended Newtonian mathematics</i>	119
7.5	<i>Complex systems</i>	124
7.6	<i>Examples of complex systems</i>	140
8	Mathematical models of complex systems	144
8.1	<i>Multivariate distributions</i>	144
8.2	<i>Deterministic and stochastic computable system models</i>	146
8.3	<i>Newtonian limits of stochastic models of complex systems</i>	149
8.4	<i>Descriptive and interpretative models of complex systems</i>	153
8.5	<i>Predictive models of complex systems</i>	158

- 8.6 Naïve approaches to complex system modelling 160
- 8.7 Refined approaches 180
- 8.8 The future of complex system modelling 187

### Part III

## The limits and potential of AI 193

- 9 Why there will be no machine intelligence 195
  - 9.1 Brain emulation and machine evolution 195
  - 9.2 Intentions and drivenness 203
  - 9.3 Consciousness 205
  - 9.4 Philosophy of mind, computation, and AI 213
  - 9.5 Objectifying intelligence and theoretical thinking 214
- 10 Why machines will not master human language 217
  - 10.1 Language as a necessary condition for AGI 217
  - 10.2 Why machine language production always falls short 219
  - 10.3 AI conversation emulation 226
  - 10.4 Mathematical models of human conversations 235
  - 10.5 Why conversation machines are doomed to fail 242
- 11 Why machines will not master social interaction 245
  - 11.1 No AI emulation of social behaviour 245
  - 11.2 AI and legal norms 248
  - 11.3 No machine emulation of morality 250
- 12 Digital immortality 259
  - 12.1 Infinity stones 259
  - 12.2 What is a mind? 261
  - 12.3 Transhumanism 282
  - 12.4 Back to Bostrom 287
- 13 AI spring eternal 288
  - 13.1 AI for non-complex systems 288
  - 13.2 AI for complex systems 295
  - 13.3 AI boundaries 298
  - 13.4 How AI will change the world 301

<i>Appendix: Turbulence: Mathematical details</i>	302
<i>Glossary</i>	304
<i>References</i>	313
