Preface	1
I Network Science in R	7
1 Network Perspectives	9
1.1 Introduction	9
1.2 Network approaches	11
1.3 Network models	12
1.4 Network theories	17
1.5 Network approaches, models, and theories	19
1.6 Conclusion	23
1.7 Exercises	23
2 Short Introduction to R	29
2.1 Introduction	29
2.2 The R environment	29
2.3 Basics of R programming	31
2.4 Basic R data structures	34
2.5 Functions and packages	36
2.6 Advanced object structures	38
2.7 Working with data in R	40
2.8 Conclusion	42
2.9 Exercises	43
3 Descriptive Analysis of Network Structures	45
3.1 Introduction	45
3.2 Complex systems and network science	46
3.3 From network science to network psychometrics	48
3.4 Constructing networks	49
3.5 Analyzing networks	50
3.6 <i>Lord of the Rings</i> example	61
3.7 Conclusion	62
3.8 Exercises	63
4 Constructing and Drawing Networks in <i>qgraph</i>	67
4.1 Introduction	67
4.2 <i>qgraph</i> functionality	67

4.3	<i>qgraph</i> interpretation	72
4.4	Saving <i>qgraph</i> networks	75
4.5	Descriptive analysis of networks using <i>qgraph</i>	75
4.6	Conclusion	76
4.7	Exercises	77
5	Association and Conditional Independence	79
5.1	Introduction	79
5.2	Independence and dependence	80
5.3	Conditional independence	83
5.4	Testing for statistical dependencies	84
5.5	Where do conditional dependencies come from?	86
5.6	Conclusion	88
5.7	Exercises	88
II	Estimating Undirected Network Models	91
6	Pairwise Markov Random Fields	93
6.1	Introduction	93
6.2	Pairwise Markov random fields	94
6.3	Interpreting pairwise Markov random fields	95
6.4	Estimating saturated network models	102
6.5	Conclusion	107
6.6	Exercises	107
7	Estimating Network Structures using Model Selection	111
7.1	Introduction	111
7.2	Comparing multivariate statistical models	112
7.3	Thresholding & pruning	115
7.4	Model search	118
7.5	Regularization	120
7.6	Recommendations for applied researchers	123
7.7	Exercises	129
8	Network Stability, Comparison, and Replicability	133
8.1	Introduction	133
8.2	Stability and accuracy in one sample	135
8.3	Analyzing and comparing multiple samples	140
8.4	Conclusion	150
8.5	Exercises	150
III	Network Models for Longitudinal Data	155
9	Longitudinal Design Choices: Relating Data to Analysis	157
9.1	Introduction	157

9.2	Data designs	158
9.3	Analysis designs	160
9.4	Differences between data and analysis	162
9.5	Separating contemporaneous and temporal effects	166
9.6	Conclusion	167
9.7	Exercises	168
10	Network Estimation from Time Series and Panel Data	169
10.1	Introduction	169
10.2	Graphical vector auto-regression	170
10.3	$N = 1$ estimation: personalized network models	171
10.4	$N > 1$ estimation: multi-level estimation	176
10.5	Challenges to GVAR estimation	182
10.6	Conclusion	188
10.7	Exercises	188
11	Modeling Change in Networks	193
11.1	Introduction	193
11.2	Time-varying network models	195
11.3	Estimating time-varying network models	197
11.4	Mood measurements example	201
11.5	Conclusion	206
11.6	Exercises	206
IV	Theory and Causality	211
12	Causal Inference	213
12.1	Introduction	213
12.2	A language for expressing causal relations	214
12.3	Statistical and causal relations	216
12.4	Structural causal models	224
12.5	Conclusion	228
12.6	Exercises	228
13	Idealized Modeling of Psychological Dynamics	233
13.1	Introduction	233
13.2	Basics of the Ising model	234
13.3	Idealized simulations of attitude dynamics	236
13.4	Modeling phenomena in intelligence research	239
13.5	Conclusion	243
13.6	Exercises	243
