Chapter 1 Signals and Communication 1

Overview 1

Why Study Animal Communication? 1

Do animals communicate? 1

Diversity and principles 2

Cues, Signals, and Signal Evolution 3

Cues 3

Signals 4

Signal evolution 5

Principles and Animal Communication 7

Principles of Evolutionary Biology 9

Classifying Communication Systems 10

Classifying by preadaptation, modality, and medium 12

Classifying by informational focus 12

Classification by honesty guarantees 15

Classification by context 15

Cross-classifications 16

The Signaling Sequence 16

Chapter 2 Sound and Sound Signal Production 19

Overview 19

Properties of Sound 19

The media of sound communication 19

The nature of sound 20

The characterization of sounds 22

The propagation of sound 30

Sound Signal Generation 33

Producing vibrations 34

Modification and coupling of sound signals 51

Balancing amplification and efficiency 55

Chapter 3 Sound Signal Propagation and Reception 65

Overview 65

Sound Propagation 65

Overall attenuation 66

Frequency pattern distortion 71

Temporal pattern distortion 78

Noise masking 81

Sound Reception 83

Coupling between medium and the receiver 84

Modification of captured sound signals 93

Detection and analysis of received sound signals 96

Body Size and Sound 107

Chapter 4

Light and Visual Signal Production 113

Overview 113

Properties of Light 113

Characteristics of electromagnetic radiation 113

How electromagnetic radiation interacts with molecules 115

Constraints on EMR wavelengths for visual communication 116

How visible light interacts with matter 118

Light-Signal Generation 121

Describing color 122

Pigments 123

Structural colors 130

Bioluminescence 138

Modification and Coupling 139

Combinatorial color-production mechanisms 140

Color patterns 143

Changing colors 143

Postures and movements 146

Transparency 148

Chapter 5

Visual Signal Propagation and Reception 153

Overview 153

Transmission of Visual Signals 153

Overview of transmission steps 153

Availability and quality of ambient light 155

Contrast with background 159

Transmission from sender to receiver 163

Signal detectability 164

Coupling from the Medium to the Receptor 165

The evolution of light-collecting strategies 165

Transparent lenses 168

Focusing the light 169

Controlling the amount of entering light 169

Reception of Visual Signals 170

The visual pigment 170

Photoreceptor cells 173

The retina 174

Resolution and sensitivity 177

Field of view 181

Visual Processing 182

Color vision 182

Feature detectors 187

Depth perception 187

Chapter 6

Chemical Signals 193

Overview 193

General Features of Chemical Communication 193

Contrasts between chemical, auditory, and visual signals 194

Forms of chemical communication 194

Identifying chemical signals:

Function before structure 194

Production of Chemical Signals 195

Types of chemicals used for intraspecific communication 195

Production mechanisms 196

Dissemination methods 208

Transmission of Chemical Signals 214

Diffusion 214

Transmission by current flow 217

Other environmental effects on chemical signal transmission 220

Chemoreception 221

Coupling from the medium to the receptor 221

Chemosensory reception 224

Finding the source 228

Chapter 7

Short Range Modalities 235

Overview 235

Touch 235

Touch signal generation and propagation 235

Touch signal reception 240

Hydrodynamic Reception 249*Hydrodynamic stimulus generation and propagation 250**Hydrodynamic stimulus reception 252***Electroreception 257***Properties of electrical stimuli 257**Passive electroreception 260**Active electroreception 265***Chapter 8****Decisions, Signals, and Information 279****Overview 279****Animal Decisions 279****Acquiring Information 281***Probability meters 281**Prior probabilities 281**Red lines and optimal decisions 281**Gaining additional information 282**Conditional probabilities and signal coding 283**Updating 284***Dynamic Decision Making 285****Biased Decision Making 286***Types of biases 286**Explanations for biases:**Curvilinear utility functions 289**Explanations for biases: Weber's law 290**Explanations for biases: Other considerations 291***Coding Strategies 293***Signal set design 293**Mapping schemes 311**Measures of coding effectiveness 313**So, what is information? 321***Chapter 9****The Economics of Communication 325****Overview 325****Biological Economics 325***Merging two disciplines 325**Individual versus evolutionary economics 326***Evolutionary Models with Minimal Genetics 329***Simple optimality models 329**Evolutionary game theoretic models 329**Adaptive dynamics models 330***Genetic Complications 331***Genetic concepts 331***Evolutionary Models with Added Genetics 336***Quantitative genetics 336**Extended quantitative genetics 338**Extended adaptive dynamics 338**The Price equation 340**Comparing evolutionary modeling techniques 341***Evolutionary Currencies 342***Measures of relative individual fitness 342**Measures of relative inclusive fitness 344***Optimal Live History Economics 350***Trade-offs and optimization in evolutionary economics 350**Life history trade-offs 350***Optimal Signaling Economics 352***Signals and physiological reserves 353**Signals and physical integrity 359**Signals and brains 363***The Value of Information 368****Chapter 10****Signal Evolution 375****Overview 375****The Evolution of Behavior 375****Models of Signal Evolution 377***Signals derived from sender precursors 377**Signals derived from receiver precursors 391***The Evolution of Reliable Signals 397***Conflicts of interest and the problem of honesty 397**Evolutionary game theory 398**Classification of signals based on type of cost 400**Causes of unreliable signaling 414*

Chapter 11

Conflict Resolution 421

Overview 421

The Process of Resolving Conflicts 421

Contest stages and information acquisition 422

Assessing one's own fighting ability 423

Types of resources and their value 424

Fighting Strategies 425

Assumptions and predictions of fighting strategy models 425

Evidence supporting the alternative models 428

Role of resource value and other asymmetries 433

Agonistic Signal Repertoires 436

Two examples of agonistic signal repertoires 436

The need for honesty guarantees 437

Fighting Ability Signals 438

Body size indicators 439

Stamina indicators 441

Weapons 445

Aggressive Motivation Signals 449

Challenge signals 449

General aggressive motivation signals 450

Offensive threat signals 451

Dominance Signals 453

Status indicators 454

Territory ownership signals 457

Victory signals 461

De-escalation Signals 462

Chapter 12

Mate Attraction and Courtship 467

Overview 467

Male and Female Reproductive Strategies 467

Sexual Selection 470

Intersexual selection models 471

Evidence for alternative sexual selection models 476

Sexually Selected Traits and Signaling 480

Condition and health 480

Genetic compatibility 492

Age indicators 494

Parental ability and other direct benefits 496

Dominance 497

Courtship 500

General principles of courtship intensity and character 500

Courtship signals 503

Sex role reversal 510

Chapter 13

Social Integration 515

Overview 515

Evolution of Cooperation 515

General Principles of Recognition 517

The process of recognition 517

Recognition mechanisms 517

Evolution of identity signals 520

Male-Female Integration 522

Mate recognition 522

Pair cooperation 528

Parent-Offspring Integration 533

Offspring and parent recognition 533

Parent-offspring conflict 537

Within-family signaling interactions 538

Group Integration 544

Group recognition 544

Appeasement signals 546

Group movement coordination and decision making 552

Cooperative breeding 557

Chapter 14

Environmental Signals 561

Overview 561

The Diversity of Environmental Signals 561

Predator Deterrent Signals 562

Detection and camouflage 562
 Notifying predators about prey suitability 564
 Last-ditch prey signals to predators 573

Alarm Signals 574

Surveillance signals 575
 Mobbing signals 581
 Victim signals 582
 Other economic considerations 585

Food Signals 589

Basic economics 589
 Amount of information 591

Autocommunication 598

Bat echolocation 599
 Cetacean echolocation 604

Chapter 15 Communication Networks 611

Overview 611

The Utility of Network Analysis 611

Characterizing Networks 612

Basic designs 612
 Network measures 614

Network Structure and Behavior 618

Structural types of networks 618
 Effect propagation in networks 620

Modeling Evolution in Networks 625

Evolutionary graph theory 625
 Social evolution on graphs 626

Animal Communication Networks 630

Linkage patterns 630
 Synchrony 637
 Other self-organized patterns 645

Chapter 16 The Broader View: Microbes, Plants, and Humans 651

Overview 651

Microbial Communication 651

Mate choice 652
 Cooperation and conflict 654

Plant Communication 660

Overview of plant function, sensory systems,
 and behavior 660
 Competitive plant interactions 665
 Sexual selection in plants 667
 Defensive alarm signals 670
 Attraction of animal mutualists 673

Human Communication 679

Human evolutionary history 679
 Emotional expression 681
 Dominance, power, and influence 685
 Honesty and deceit 687
 Sexual selection, mate attraction,
 and courtship 689
