

Contents

1	Introduction	1
1.1	Contents Overview	1
1.2	Prerequisite Knowledge	3
1.3	Software Libraries	3
1.4	Supplementary Material	4
	References and Further Reading	4
2	Mesh Processing Basics	5
2.1	Mesh Representation	6
2.2	Mesh File Formats	7
2.3	Polygonal Manifolds	11
2.4	OpenMesh	14
2.5	Mesh Data Structures	15
	2.5.1 Face-Based Data Structure	15
	2.5.2 Winged-Edge Data Structure	17
	2.5.3 Half-Edge Data Structure	18
2.6	Mesh Traversal	20
	2.6.1 Iterators	20
	2.6.2 Adjacency Queries	22
	2.6.3 Circulators	22
2.7	Surface Normal Computation	25
2.8	Bounding Box Computation	28
2.9	Triangle Adjacency Primitive	29
2.10	Chapter Resources	31
	References and Further Reading	32
3	Mesh Processing Algorithms	33
3.1	Mesh Simplification	33
	3.1.1 Error Metrics	34
	3.1.2 Vertex Decimation	39
	3.1.3 Edge Collapse Operation	40
	3.1.4 Mesh Simplification Using OpenMesh	41

3.2	Mesh Subdivision	42
3.2.1	Subdivision Curves: Interpolation Versus Approximation	42
3.2.2	Subdivision of Polygonal Elements	45
3.2.3	Butterfly Algorithm	46
3.2.4	Charles-Loop Subdivision Algorithm	48
3.2.5	Root-3 Subdivision	50
3.2.6	Catmull-Clark Subdivision	51
3.3	Mesh Parameterization	54
3.3.1	Barycentric Coordinates	55
3.3.2	Barycentric Embedding	57
3.3.3	Spherical Embedding	62
3.4	3D Morphing	63
3.4.1	Shortest Distance and Projection	63
3.4.2	Point Correspondence	65
3.4.3	Projective Mapping	67
3.4.4	Barycentric Mapping	68
3.5	Chapter Resources	69
	References and Further Reading	70
4	The Geometry Shader	73
4.1	General Properties	74
4.2	Backface Culling	74
4.3	Surface of Revolution	75
4.4	Billboards	77
4.5	Modelling Trees	79
4.5.1	Leaves	79
4.5.2	Stem	81
4.6	Non-photorealistic Rendering	83
4.7	Chapter Resources	89
	References and Further Reading	89
5	Mesh Tessellation	91
5.1	OpenGL-4 Tessellation Stages	91
5.1.1	Patches	92
5.1.2	Tessellation Control Shader	93
5.1.3	Dynamic Level of Detail	97
5.1.4	Tessellation Evaluation Shader	98
5.1.5	Blending Functions	99
5.1.6	Lighting Calculations	102
5.2	Terrain Rendering	103
5.2.1	A Patch-Based Terrain Model	103
5.2.2	Micro-level Cracking	108
5.2.3	Vertex Normal Computation	109
5.3	Procedural Heightmap Generation	111
5.3.1	Sum of Sinusoids	111

5.3.2	Perlin Noise	112
5.3.3	Diamond-Square Algorithm	116
5.4	Bezier Surface Patches	120
5.4.1	The Teapot	124
5.4.2	The Gumbo	125
5.4.3	Mesh Explosion	127
5.5	Chapter Resources	128
	References and Further Reading	128
6	Quaternions	129
6.1	Generalized Rotations	130
6.1.1	Euler Angle Rotation	131
6.1.2	Angle-Axis Rotation	133
6.2	Overview of Quaternions	135
6.2.1	Quaternion Algebra	135
6.2.2	Quaternion Transformation	137
6.2.3	Quaternion Rotation	138
6.3	Rotation Interpolation	141
6.3.1	Linear Interpolation of Rotations	141
6.3.2	Quaternion Spherical Linear Interpolation (SLERP)	144
6.4	Quaternion Derivative	145
6.5	GLM Quaternion Class	146
6.6	Assimp Quaternion Class	146
6.7	Chapter Resources	149
	References and Further Reading	149
7	Character Animation	151
7.1	Scene Graphs	152
7.1.1	Model Transformations	152
7.1.2	A 2D Skeletal Structure	154
7.2	Assimp	158
7.3	Motion Capture Data	158
7.4	Skeleton Animation	163
7.4.1	Updating Node Matrices	164
7.4.2	Updating the Display	166
7.4.3	Quaternion—Euler Angle Conversion	168
7.5	Bones	169
7.5.1	Offset Matrix	172
7.5.2	Vertex Transformation	174
7.5.3	Keyframe Interpolation	177
7.6	Vertex Blending	180
7.7	Animation Retargeting	183
7.8	Chapter Resources	185
	References and Further Reading	186

8 Kinematics	187
8.1 Forward Kinematics	187
8.2 Inverse Kinematics	189
8.2.1 Cyclic Coordinate Descent	189
8.2.2 Skeleton IK	191
8.2.3 FABRIK Algorithm	193
8.3 Chapter Resources	197
References and Further Reading	198
Index	199
