
Lessons learned

12

Reassess dam safety

Martin Wieland explains the need to evaluate the seismic safety of existing dams.

14

Improving flood fights home and abroad

Sharing tools and methods in the fight against floods

16

Can hydropower resolve the energy crisis?

Sustainable hydropower critical role in future energy systems

New innovations

18

Waves of innovation

Developments in tidal energy

22

Tagless technology for fish tracking

Bringing the task of fish tracking into the 21st century with AI technology

26

Technology benchmark

Detailing the first horizontal, six-nozzle Pelton turbine

Environment

27

Floodgate replacement at Wirtz Dam

Three-year project underway to remove and replace the 10 floodgates at Wirtz Dam

28

A satellite remote sensing perspective on water resources

Satellite study focuses on the Belo Monte Project and the Xingu people of the Amazon.

32

Environmental investment

Funding repairs to ageing water delivery systems and dams

36

Battling against climate change

Countries make plans and prepare for increasingly extreme weather events in the not-too-distant future

Asia

38

Asian insights

Helping to avoid transboundary river conflicts across the region

40

Complete and continuing

Updates on hydropower and dam projects in development

Construction

44

Eyes in the sky, and underground

Crane put to work underground, with details on new products recently released to the market

46

The positive impact of flexible working

Initial results from a ground-breaking flexible working pilot programme in the construction sector, demonstrate that flexible working has been a key contributor to improving employee satisfaction and achieving a reduction in sickness absence rates
