

## CONTENTS:

IMPORTANT ANNOUNCEMENT	2
ACKNOWLEDGEMENTS	3
CONTENTS	5
1 INTRODUCTION	7
2 EXPERIMENTS	7
2.1 <i>Experimental equipment</i>	7
2.2 <i>Experimental techniques</i>	9
2.3 <i>Properties of samples</i>	10
2.4 <i>Data</i>	11
3 FLOW OF EXPERIMENTS	12
3.1 <i>Passive pressure - E5/0,1 and E6/0,1</i>	13
3.2 <i>Active pressure - E7/0,1 and E8/0,1</i>	13
4 RESULTS	15
4.1 <i>Strain processes</i>	15
4.1.1 <i>Experiments with pressure at rest and passive pressure – E5/0,1 and E6/0,1</i>	16
4.1.1.1 <i>Slip surfaces</i>	19
4.1.1.2 <i>Displacements</i>	22
4.1.1.3. <i>Comparison to wall translative motion results</i>	23
4.1.2 <i>Experiments with active pressure – E7/0,1 and E8/0,1</i>	24
4.1.2.1 <i>Slip surfaces</i>	29
4.1.2.2 <i>Displacements</i>	31
4.1.2.3. <i>Comparison to wall translative motion results</i>	34
4.2 <i>Stress processes</i>	34
4.2.1 <i>Wall-soil contact stresses</i>	35
4.2.2 <i>Pressure components</i>	35
4.2.3 <i>Friction on walls</i>	36
4.2.3.1 <i>Samples contra retaining walls</i>	36
4.2.3.2 <i>Samples contra lateral glass sides</i>	37
4.2.4 <i>Normal pressure on moved wall</i>	37
4.2.4.1 <i>Pressure at rest</i>	38
4.2.4.2 <i>Passive pressure</i>	39
4.2.4.3 <i>Active pressure</i>	40
4.2.4.4 <i>Reaction moduli</i>	42
4.2.4.5. <i>Comparison to wall translative motion results</i>	50
4.2.5. <i>Distribution of normal pressure on moved wall</i>	51
4.2.5.1 <i>Notation of pressures and symbols</i>	51
4.2.5.2 <i>Pressure at rest</i>	52
4.2.5.3 <i>Passive pressure</i>	53
4.2.5.4 <i>Active pressure</i>	56
4.2.5.5 <i>Comparison to wall translative motion results</i>	59
4.2.6 <i>Normal pressure on stable back wall</i>	60
4.2.6.1 <i>Pressure at rest</i>	60
4.2.6.2 <i>Passive pressure</i>	62
4.2.6.3 <i>Active pressure</i>	62
4.2.7 <i>Distribution of normal pressure on stable back wall</i>	63
4.2.7.1 <i>Pressure at rest</i>	64
4.2.7.2 <i>Passive pressure</i>	66

4.2.7.3	<i>Active pressure</i>	67
5	DEPENDENCIES OF PRESSURE EFFECTS ON WALL TOP DISPLACEMENT	69
5.1	<i>Pressure at rest</i>	70
5.2	<i>Passive pressure</i>	71
5.3	<i>Active pressure</i>	74
5.4	<i>Complete dependencies</i>	77
5.4.1	<i>Total normal forces</i>	78
5.4.2	<i>Moments of total normal forces to the toe</i>	79
5.5	<i>Comparison to wall translative motion results</i>	80
6	DESIGN OF THEORETICAL DEPENDENCIES	84
6.1	<i>Non-cohesive soils</i>	84
6.1.1	<i>Analysis symbols</i>	85
6.1.2	<i>Analytical solution</i>	86
6.1.3	<i>Theoretical pressures</i>	88
6.1.4	<i>Theoretical wall movements</i>	90
6.1.5	<i>Designed theoretical dependence - pressure/movement</i>	90
6.1.6	<i>Comparison to the experiments</i>	91
6.1.7	<i>Comparison to wall translative motion results</i>	94
6.2	<i>Cohesive soils</i>	96
6.2.1	<i>Analogical model</i>	96
6.2.2	<i>Cohesive sample</i>	96
6.2.3	<i>Designed dependence pressure-movement</i>	97
7	INSTABILITY OF LATERAL EARTH PRESSURE	98
7.1	<i>Instability factors</i>	99
7.2	<i>Time instability</i>	99
7.3	<i>First observation of time instability</i>	99
7.4	<i>Research of time instability</i>	100
7.4.1	<i>Rest after active movements</i>	100
7.4.2	<i>Rest after passive movements</i>	106
7.5	<i>Temperature influence</i>	111
7.6	<i>Evaluation</i>	112
7.7	<i>Results</i>	115
7.8	<i>Comparison to wall translative motion results</i>	116
8	FAST PROCESSES IN THE MASS	116
9	CONSEQUENCES OF TIME INSTABILITY	116
10	LATERAL PRESSURE THEORY	117
11	CONSEQUENCES FOR PRACTICE	118
11.1	<i>Routine analytical models</i>	118
11.2	<i>Very advanced numerical models</i>	119
12	CONCLUSIONS	119
12.1	<i>Principal observations</i>	120
12.2	<i>Relevance of observations in model tests to full-scale behaviour</i>	120
13	COMPARISON TO RESULTS FOR WALL TRANSLATIVE MOTION	122
14	CONCLUDING REMARKS	123
15	REFERENCES	124
