### 1. New Directions in the Study of Family-Level Dynamics During Infancy and Early Childhood

5

*James P. McHale, Regina Kuersten, Allison Lauretti*

New studies indicate that family-level dynamics explain individual variability in a variety of measures of early socioemotional development.

### 2. Assessing the Triadic Alliance Between Fathers, Mothers, and Infants at Play

27

*Elisabeth Fivaz-Depeursinge, France Frascarolo, Antoinette Corboz-Warnery*

Types of triadic alliances between fathers, mothers, and infants at play are illustrated, and their stability and predictive validity are examined.

### 3. Coparenting, Parenting, and Early Emotional Development

45

*Jay Belsky, Sam Putnam, Keith Crnic*

Both parenting style and coparenting differences help to explain shifts in toddler inhibition between the ages of one and three.

### 4. Spillover Effects of Marital Conflict: In Search of Parenting and Coparenting Mechanisms

57

*Lynn Fainsilber Katz, John M. Gottman*

Different pathways connect marital hostility and husband emotional withdrawal to later child behavior problems, with parenting quality and child emotional regulation serving different mediational functions depending on the marital construct examined.

### 5. Coparenting, Family Interactions, and Competence Among African American Youths

77

*Gene H. Brody, Douglas L. Flor*

Parents' perceptions of their coparenting relationship are tied to triadic family processes and to academic and adjustment indices in nine- to twelve-year-old African American children.

### 6. Coparenting in a Family Context: Emerging Achievements, Current Dilemmas, and Future Directions

93

*Philip A. Cowan, James P. McHale*

Advances in the study of coparental and whole-family dynamics, and future directions for the field, are reviewed.
