

This concise introduction to modern experimental Surface Physics is based on many years of teaching experience. The authors present an easy to comprehend microscopic description of the phenomena at surfaces of solids.

- ▶ An account of properties and processes at surfaces.
- ▶ From concepts to practical application, from sample preparation to diverse analytic methods and current research.
- ▶ Contains preparatory exam questions and answers.

Thomas Fauster has acquired experience with many methods of surface physics and has specialized in research with laser-based photoelectron spectroscopy.

Lutz Hammer has his research focus on electron diffraction augmented by electron spectroscopy and scanning tunneling microscopy.

Klaus Heinz is a leading figure in the experimental and theoretical development of low-energy electron diffraction that allows a precise analysis of the atomic structure of surfaces of solids.

Alexander Schneider uses scanning tunneling microscopy and spectroscopy at low temperatures. His focus is on the interaction between adsorbates and solid surfaces.

All four researchers are at the Chair of Solid State Physics of Friedrich-Alexander-Universität Erlangen-Nürnberg (FAU) in Germany.

Contents

Preface — V

Legend — X

Fundamentals

- 1 Properties of surfaces — 5**
 - 1.1 Atomic structure of surfaces — 5
 - 1.1.1 Surface crystallography — 6
 - 1.1.2 Superlattices and superstructures — 10
 - 1.1.3 Surface relaxation — 14
 - 1.1.4 Surface reconstruction — 17
 - 1.2 Electronic structure — 23
 - 1.2.1 Bloch's theorem — 23
 - 1.2.2 Surface Brillouin zone — 25
 - 1.2.3 Projected bulk band structure — 27
 - 1.2.4 Surface states — 30
 - 1.2.5 Work function — 35
 - 1.3 Lattice vibrations at surfaces — 37
- 2 Processes at surfaces — 42**
 - 2.1 Energy-loss processes of electrons — 42
 - 2.1.1 Energy distribution of scattered electrons — 43
 - 2.1.2 Inelastic mean free path — 46
 - 2.2 Adsorption, desorption, and diffusion — 47
 - 2.2.1 Adsorption — 48
 - 2.2.2 Desorption — 51
 - 2.2.3 Diffusion — 52
 - 2.3 Film growth and epitaxy — 54
 - 2.3.1 Growth modes — 54
 - 2.3.2 Nucleation — 55
 - 2.3.3 Epitaxy — 56
 - 2.3.4 Nanostructures formed by self-organization — 58

Methods

- 3 Preparation of surfaces — 65**
 - 3.1 Sources of contamination — 65

3.2	Preparation of clean single-crystal surfaces — 66
3.2.1	Cleaving — 67
3.2.2	Annealing — 67
3.2.3	Chemical cleaning — 69
3.2.4	Sputtering by ions — 70
3.3	Modification of surfaces — 72
3.3.1	Adsorbate-covered surfaces — 73
3.3.2	Layers on surfaces — 73
4	Diffraction methods — 77
4.1	Kinematic description of diffraction — 79
4.2	Diffraction of low-energy electrons — 84
4.2.1	Experiment — 84
4.2.2	Geometry of the diffraction pattern — 85
4.2.3	Quantitative structure analysis — 88
4.3	Diffraction of high-energy electrons — 93
4.4	Surface x-ray diffraction — 93
4.5	Helium diffraction — 95
4.6	Fine structure of x-ray absorption — 96
5	Electron spectroscopies — 101
5.1	Instrumentation — 102
5.1.1	Electron sources — 102
5.1.2	Photon sources — 103
5.1.3	Energy analyzers — 105
5.1.4	Electron detection — 107
5.1.5	Modulation technique — 108
5.2	Element-specific spectroscopy — 109
5.2.1	X-ray photoelectron spectroscopy — 109
5.2.2	Core-level shifts — 113
5.2.3	Auger electron spectroscopy — 115
5.2.4	Lineshape of Auger electron spectra — 118
5.2.5	Qualitative and quantitative analysis of chemical elements — 119
5.3	Determination of surface band structures — 121
5.3.1	Angle-resolved photoemission — 122
5.3.2	Inverse photoemission — 127
5.3.3	Two-photon photoemission — 128
5.3.4	Selection rules for photoemission — 130
5.4	Spectroscopy of surface vibrations — 132
5.4.1	Fundamentals and experiment — 132
5.4.2	Interactions and selection rules — 133
5.4.3	Applications — 137

6	Scanning probe microscopies — 143
6.1	Principle of scanning probe methods — 143
6.2	Scanning tunneling microscopy — 144
6.2.1	Topographic images — 146
6.2.2	Tunnel process — 148
6.2.3	Spectroscopy — 151
6.2.4	Applications and other interaction mechanisms — 154
6.3	Atomic force microscopy — 155
6.3.1	Contact AFM — 156
6.3.2	Dynamic AFM — 156
6.3.3	Forces and their effects in AFM — 158
6.3.4	Applications and other interaction mechanisms — 160

7	Particle spectroscopies — 162
7.1	Thermal desorption spectroscopy — 162
7.1.1	Fundamentals and experimental setup — 162
7.1.2	Types of desorption spectra — 164
7.1.3	Evaluation of desorption spectra — 166
7.1.4	Desorption spectra with several maxima — 169
7.2	Ion scattering — 170

A	Appendix — 174
A.1	Planes and surfaces of hcp crystals — 174
A.2	Identification of plane groups — 175
A.3	Brillouin zones and mirror planes — 176
A.4	Energies of Auger transitions — 178

Answers to exercise problems and questions — 179

Acronyms — 185

Index — 187
