

Full contents

Part I The fundamentals

1 Molecules and molecular structures: an overview 3

1.1	Simple covalent molecules	4
1.2	Structure determination by X-ray diffraction	14
1.3	Where are the bonds?	17
1.4	Types of bonding	19
1.5	Weaker non-bonded interactions	21
1.6	Solids	25
1.7	How to draw molecules	25
1.8	Common names and abbreviations	27
1.9	The ideal gas	28
1.10	Moving on	32
	Answers to self-test exercises	34

2 Electrons in atoms 35

2.1	Introducing quantum mechanics	36
2.2	Introducing orbitals	39
2.3	Hydrogen atomic orbitals	43
2.4	Spin	62
2.5	Hydrogen-like atoms	63
2.6	Multi-electron atoms	64
2.7	Ionization energies	71
2.8	Moving on	77
	Further reading	77
	Answers to self-test exercises	77

3 Symmetry 79

3.1	Why symmetry is important	79
3.2	Symmetry elements and symmetry operations	80
3.3	Point groups	85
3.4	Applications of symmetry	89
3.5	Classification of orbitals according to symmetry	93
3.6	Moving on	96
	Further reading	96
	Answers to self-test exercises	96

4	Electrons in molecules: diatomics	99
4.1	Introducing molecular orbitals	100
4.2	H ₂ , He ₂ and their ions	111
4.3	Homonuclear diatomics of the second period	112
4.4	Photoelectron spectra	130
4.5	Heteronuclear diatomics	132
4.6	Moving on	139
	Further reading	139
	Answers to self-test exercises	139
5	Electrons in molecules: polyatomics	141
5.1	The simplest triatomic: H ₃ ⁺	142
5.2	More complex linear triatomics	146
5.3	MOs of water and methane	149
5.4	Hybrid atomic orbitals	153
5.5	Comparing the hybrid and full MO approaches	159
5.6	Extending the hybrid concept	161
5.7	Bonding in organic molecules	164
5.8	Delocalized bonding	167
5.9	Delocalized structures including heteroatoms	175
5.10	Moving on	177
	Further reading	178
	Answers to self-test exercises	178
6	Bonding in solids	181
6.1	Metallic bonding: introducing bands	182
6.2	Ionic solids	190
6.3	Moving on	199
	Further reading	199
	Answers to self-test exercises	199
7	Thermodynamics and the Second Law	201
7.1	Spontaneous processes	202
7.2	Properties of matter: state functions	204
7.3	Entropy and the Second Law	205
7.4	Heat, internal energy and enthalpy	212
7.5	Entropy in terms of heat	213
7.6	Calculating the entropy change of the Universe	216
7.7	Gibbs energy	219
7.8	Chemical equilibrium	221
7.9	Finding the standard Gibbs energy change	226
7.10	Interpreting the value of $\Delta_r G^\circ$	232
7.11	$\Delta_r H^\circ$ and $\Delta_r S^\circ$ for reactions not involving ions	234
7.12	$\Delta_r H^\circ$ and $\Delta_r S^\circ$ for reactions involving ions in solution	237
7.13	Applications	240
7.14	Acidity, basicity and pK_a	243
7.15	How much product is there at equilibrium?	250

7.16 Moving on	254
Further reading	255
Answers to self-test exercises	255

8 Trends in bonding 257

8.1 Electronic configuration and the periodic table	257
8.2 Orbital energies and effective nuclear charges	260
8.3 Atomic sizes across the periodic table	270
8.4 Ionization energies and electron affinities	273
8.5 Trends in oxidation states across the periodic table	278
8.6 Summary of the trends in orbital energies and sizes	279
8.7 Bonding in the elements – non-metals	280
8.8 Metallic structures	287
8.9 The transition from metals to non-metals	292
8.10 Moving on	295
Further reading	295
Answers to self-test exercises	295

9 Bonding between the elements 297

9.1 The effect of orbital size and energy mismatch	297
9.2 The classification of compounds as ionic or covalent	302
9.3 Structural trends across the periodic table	304
9.4 Radius ratio rules	307
9.5 Compounds with lower coordination numbers	312
9.6 Moving on	316
Further reading	316
Answers to self-test exercises	316

10 Describing reactions using orbitals 319

10.1 The redistribution of electrons in a reaction	319
10.2 HOMO–LUMO interactions	322
10.3 Interactions involving nonbonding LUMOs	325
10.4 Interactions involving π antibonding LUMOs	329
10.5 Interactions involving σ antibonding LUMOs	332
10.6 Summary of the effects of different HOMO–LUMO interactions	335
10.7 The role of protonation in reactions	335
10.8 Intramolecular orbital interactions	338
10.9 Rearrangement reactions	339
10.10 Moving on	341
Answers to self-test exercises	342

11 Organic chemistry 1: functional groups 343

11.1 Functional groups	344
11.2 Changing functional group level	349
11.3 Level two to level one – carbonyl addition reactions	353
11.4 Transformations within functional group level two	358
11.5 Transformations within functional group level three	368
11.6 Moving down from functional group level three	385

11.7 Transformations within level one	392
Further reading	405
Answers to self-test exercises	405
12 The rates of reactions	407
12.1 The rate of a reaction	408
12.2 Rate laws	410
12.3 Temperature dependence	413
12.4 The energy barrier to reaction	414
12.5 Elementary reactions and reaction mechanisms	417
12.6 Reactions in solution	418
12.7 Sequential reactions	419
12.8 Analysing the kinetics of complex mechanisms	426
12.9 Chain reactions	431
Further reading	437
Answers to self-test exercises	437
Part II Going further	
13 Spectroscopy	441
13.1 Mass spectrometry	442
13.2 Spectroscopy and energy levels	451
13.3 IR spectroscopy – introduction	455
13.4 Interpreting IR spectra	462
13.5 Nuclear Magnetic Resonance (NMR)	470
13.6 Coupling in NMR	480
13.7 More complicated coupling patterns – proton NMR	492
Further reading	501
Answers to self-test exercises	501
14 Organic chemistry 2: three-dimensional shapes	503
14.1 The relationships between isomers	504
14.2 The effect of rotations about bonds	506
14.3 Isomerism in alkenes	512
14.4 Enantiomers and chirality	514
14.5 Symmetry and chirality	523
14.6 The conformation of cyclic molecules	524
14.7 Moving on	535
Further reading	536
Answers to self-test exercises	536
15 Organic chemistry 3: reactions of π systems	539
15.1 Elimination reactions – the formation of alkenes	540
15.2 Electrophilic addition to alkenes	550
15.3 Enols and enolates	560
15.4 The reactions of enols and enolates	567
15.5 Introduction to aromatic systems	573

Further reading	587
Answers to self-test exercises	587
16 Main-group chemistry	589
16.1 Overview	590
16.2 Key concepts in main-group chemistry	591
16.3 Hydrolysis of chlorides	601
16.4 Oxides	610
16.5 Brief survey of the chemistry of each group	611
16.6 Moving on	623
Further reading	623
Answers to self-test exercises	623
17 Transition metals	625
17.1 Orbital energies and oxidation states	626
17.2 Complexes	630
17.3 Bonding in octahedral complexes	632
17.4 High-spin and low-spin octahedral complexes	639
17.5 Magnetic and spectroscopic properties of complexes	641
17.6 Consequences of the splitting of the <i>d</i> orbitals	643
17.7 Tetrahedral and square-planar complexes	647
17.8 Crystal-field theory	649
17.9 Organometallic complexes	649
17.10 Aqueous chemistry and oxoanions	655
17.11 Moving on	658
Further reading	658
Answers to self-test exercises	659
18 Quantum mechanics and spectroscopy	661
18.1 The postulates of quantum mechanics	663
18.2 A free particle moving in one dimension	669
18.3 Particle in a box	672
18.4 Particle in a two-dimensional square well	681
18.5 The harmonic oscillator	683
18.6 Spectroscopy and energy levels	690
18.7 The IR spectrum of a diatomic	693
18.8 Vibrations of larger molecules	702
18.9 Raman spectroscopy	704
18.10 Summary of the features of vibrational spectroscopy	705
18.11 The rigid rotor	706
18.12 The microwave spectrum of a diatomic	708
18.13 Vibration–rotation spectrum of a diatomic	713
18.14 The hydrogen atom	717
18.15 Electronic transitions	718
Further reading	721
Answers to self-test exercises	721

19 Chemical thermodynamics	723
19.1 The First Law	724
19.2 Work of gas expansions	727
19.3 Internal energy, enthalpy and heat capacity	733
19.4 The Gibbs energy	738
19.5 The mixing of ideal gases	741
19.6 Chemical equilibrium	743
19.7 Equilibria involving other than gases	750
19.8 Determination of the standard Gibbs energy change	752
19.9 The temperature dependence of the equilibrium constant	755
19.10 Determination of absolute entropies	759
Further reading	760
Answers to self-test exercises	760

20 Chemical kinetics	761
20.1 Measuring concentration	761
20.2 Integrated rate laws	769
20.3 Other methods of analysing kinetic data	777
20.4 Collision theory	778
20.5 Potential energy surfaces	783
20.6 Transition state theory	784
Further reading	789
Answers to self-test exercises	789

21 Electrochemistry	791
21.1 Electrochemical cells	792
21.2 Thermodynamic parameters from cell potentials	796
21.3 The Nernst equation and standard cell potentials	799
21.4 The spontaneous cell reaction	805
21.5 Summary	806
21.6 Types of half cells	807
21.7 Assessing redox stability using electrode potentials	811
21.8 The limits of stability in aqueous solution	814
21.9 Using cell potentials to determine thermodynamic parameters	816
21.10 Oxidation state diagrams	820
21.11 Measurement of concentration	825
Further reading	829
Answers to self-test exercises	829

Part III Reference material

22 Dimensions, units and some key mathematical ideas	833
22.1 Dimensional analysis	833
22.2 Units	839
22.3 Trigonometric functions	847
22.4 The exponential function	851

22.5	Calculus: differentiation	856
22.6	Calculus: integration	861
22.7	Differential equations	865
	Further reading	867
	Answers to self-test exercises	867

<i>Index</i>	869
<i>Orbital energies</i>	877

Part I

The fundamentals

Contents

1	Molecules and structures: an overview
2	Electrons in atoms
3	Symmetry: a guide to the properties of molecules
4	Electrons in molecules: valence
5	Electrons in molecular orbitals
6	Bonding in solids
7	Thermodynamics and the Second Law
8	Groups in chemistry
9	Bonding between the elements
10	Chemical reactions and energy
11	Organic chemistry: functional groups
12	The rates of reactions
