

Contents

Introduction	1
1 Reality, the intersection of multiple theories.....	7
1.1 Efficient market hypothesis.....	8
1.2 The theory of chaos	10
1.3 Behavioral market theory	14
2 The dynamics of crowd behavior	19
2.1 Methodologies for the study of markets	19
2.2 The system theory point of view	21
2.2.1 The exchange of energy and information	22
2.2.2 The crowd's life cycle.....	24
2.2.3 Unexpected events and shocks.....	27
2.2.4 Generalized turnover patterns	29
2.2.5 Generalized pro-trend patterns.....	32
2.3 The wave principle.....	35
2.3.1 The hierarchical organization of Elliott waves	37
2.3.2 The direction of waves	38
2.3.3 The mode of waves	39
2.3.4 The hierarchy of complete cycles	42
2.3.5 Variations of motive waves	44
2.3.6 Variations of corrective waves.....	48
2.3.7 The principle of alternation.....	52
2.4 Fibonacci mathematics in financial markets	52
2.4.1 The golden ratio	53
2.4.2 The golden rectangle and golden spiral	54
2.4.3 The application of Fibonacci numbers in financial markets	55
3 Security exchanges at a glance.....	61
3.1 Financial markets	61
3.2 Security exchanges.....	63
3.2.1 Entities participating in markets	63

3.2.2	Order-driven and quote-driven markets	68
3.2.3	World's largest and most long-standing security exchanges	70
3.2.4	Types of orders.....	72
3.2.5	Pit trading versus electronic trading.....	76
3.3	Exchange clearing systems.....	78
4	Basic tenets of automated trading	85
4.1	Indicators and oscillators.....	86
4.1.1	Moving averages	86
4.1.2	Average directional index	90
4.1.3	Average true range	92
4.1.4	Relative strength index.....	93
4.1.5	Bollinger bands	95
4.2	Money management	96
4.3	Statistics	100
4.4	The sensitivity to changes of parameters	104
5	Simulation and backtesting of trading strategies ..	107
5.1	The value of simulation in trading	107
5.2	Human factor in the trading chain.....	108
5.3	Modeling of intra-bar price movements.....	109
5.4	Modeling of order execution	111
5.5	Modeling of time and price skews	113
5.6	Discrete Event System Specification	115
5.6.1	DEVS formalism.....	116
5.6.2	Simulators and coordinators for DEVS.....	117
5.7	Simulation of the trading environment.....	122
5.7.1	The <i>data provider</i> component.....	125
5.7.2	The <i>delay</i> component	126
5.7.3	The <i>order execution</i> component.....	127
5.7.4	The <i>ATS</i> component	129
5.7.5	The parallel run of multiple trades	133
5.8	Embedding trading strategies into the simulation	135
5.8.1	Simulation case study	136

6	Optimization of trading strategies.....	141
6.1	Parametric trading strategies	141
6.1.1	Choosing an appropriate fitness function	143
6.1.2	Parametric surface.....	146
6.2	Exhaustive search.....	149
6.3	Genetic algorithms	150
6.3.1	Inspiration from nature	151
6.3.2	Computational model of genetic evolution.....	151
6.3.3	Optimization case study	157
7	Fuzzy approach to trading strategies.....	161
7.1	Concept of uncertainty and the basics of fuzzy logic theory	162
7.1.1	Linguistic variables and fuzzy sets	163
7.2	Fuzzy logic and fuzzy inference	166
7.2.1	Fuzzification	168
7.2.2	Inference engine and evaluation of rules	169
7.2.3	Defuzzification.....	176
7.3	Fuzzy-based trading strategies	177
7.3.1	Triple Screen Trading System	177
7.3.2	Fuzzy approach to the Triple Screen Trading System	180
7.4	Analysis of sensitivity and robustness	187
7.4.1	Sensitivity analysis of the whole market system	187
7.4.2	Sensitivity analysis of the signaling system.....	188
7.5	Case study	190
	Summary	193
	Bibliography and further reading	195
	Notations, functions and mathematical symbols	199
