

CONTENTS

List of Contributors to this book v
Preface vii
Contents ix

Chapter 1 — AFLATOXIN 1
by W.H. Butler

Outbreaks of disease attributable to the fungus, 1 — Isolation of toxic metabolites of the fungus, 3 — Biosynthesis, 5 — Environmental and laboratory conditions favouring production of toxic metabolites, 6 — Analysis for toxic metabolites, 7 — Bioassay system, 8 — Natural occurrence, 10 — Biological activity in experimental systems, 10 — Metabolism and mode of action of the aflatoxins, 19 — Risks to man, 22 — References, 24 —

Chapter 2 — *PITHOMYCES CHARTARUM*: A FUNGAL PARAMETER
IN THE AETIOLOGY OF SOME DISEASES OF DOMESTIC ANI-
MALS 29
by L.G. Atherton, D. Brewer and A. Taylor

Taxonomy and morphology of *Pithomyces chartarum*, 30 — Ecology of *Pithomyces chartarum*, 34 — Geographical distribution, 34 — Habitats of *Pithomyces chartarum*, 34 — Ecology of *Pithomyces chartarum* on pasture, 34 — Methods of determining populations of fungal spores, 35 — Seasonal changes of populations of *Pithomyces chartarum*, 38 — Metabolism of *Pithomyces chartarum*, 41 — (1) Growth and nutrition of *P. chartarum* strain C, 41 — (2) Sporulation of *P. chartarum*, 42 — (3) Production of toxic metabolites by *P. chartarum*, 44 — (4) Comparison of different isolates of *P. chartarum*, 45 — (5) Biosynthesis of sporidesmins, 45 — Quantitative estimations of sporidesmins, 49 — Toxicity of sporidesmin in mammals, 53 — (1) The response of mammals to different doses of sporidesmin, 53 — (2) Clinical signs of sporidesmin intoxication in sheep, 54 — (3) Morbid anatomy of sporidesmin intoxication, 55 — (4) Histology, 56 — (5) Changes in liver function following sporidesmin intoxication, 58 — (6) Biochemical changes in blood and liver constituents after sporidesmin intoxication, 60 — Control of facial eczema, 63 — Acknowledgements, 64 — References, 64 —

Chapter 3 — *CLAVICEPS PURPUREA* — ERGOTISM 69
by S.J. van Rensburg and B. Altenkirk

Outbreaks of disease attributable to the fungus, 71 — Chemical and physical properties of the toxic metabolites, 74 — Type I — Derivatives of lysergic acid, 75 — Type II — The clavine alkaloids, 80 — Biosynthesis of ergot alkaloids, 82 — Pigments of ergot, 82 — Environmental and laboratory conditions favouring the growth of ergot, 84 — Analysis for the toxic metabolites, 86 — Natural occurrence of metabolites, 87 — Biological activity in experimental systems, 88 — Peripheral vasoconstriction, 88 — Epinephrine reversal, 89 — Uterine tests, 89 — Seminal vesicle standardization, 90 — Mode of action of ergot constituents, 91 — Peripheral effects, 91 — Neurohormonal actions, 92 — Central effects, 92 — Poisoning following therapeutic use, 93 — References, 94 —

Chapter 4 — *RHIZOCTONIA LEGUMINICOLA* — SLAFRAMINE . . . 97

by Steven D. Aust

Occurrence, 97 — Isolation of slaframine, 98 — Molecular structure of slaframine, 100 — Analysis for slaframine, 102 — Biosynthesis of slaframine, 103 — Physiological mode of action of slaframine, 103 — Summary, 108 — References, 109 —

Chapter 5 — *PHOMOPSIS LEPTOSTROMIFORMIS* 111

by W.F.O. Marasas

Lupinosis — the syndrome, 112 — (a) Geographical distribution, 112 — (b) Clinical signs and pathological changes, 113 — (c) Weather conditions associated with outbreaks of lupinosis, 118 — (d) Fungi in the aetiology of lupinosis, 118 — *Phomopsis leptostromiformis* — the causal fungus, 120 — (a) Taxonomy and morphology, 120 — (b) Synonymy, 121 — (c) Geographical distribution, 122 — (d) Pathogenicity, 122 — (e) Toxicity, 124 — Acknowledgement, 125 — References, 125 —

Chapter 6 — OESTROGENIC MYCOTOXINS SYNTHESIZED BY *FUSARIUM* 129

by C.J. Mirocha and Clyde M. Christensen

Chemistry and physiological activity, 131 — Naturally occurring derivatives of zearalenone, 133 — Biological activity, 134 — (1) Swine, 134 — (2) Poultry, 139 — (3) Dairy cattle, 141 — (4) Regulation of sexual reproduction in *Gibberella zeae* (*Fusarium roseum* "Graminareum"), 142 — Occurrence of zearalenone in feedstuffs, 142 — Biosynthesis of zearalenone, 144 — Analytical methods, 145 — Extraction and clean-up, 145 — Quantitation, 146 — Acknowledgement, 147 — References, 147 —

Chapter 7 — *PENICILLIUM CYCLOPIUM* 149

by I.F.H. Purchase

Diseases caused by *P. cyclopium*, 150 — Cyclopiazonic acid, 150 — Biosynthesis of cyclopiazonic acid, 151 — Environmental conditions favouring production of cyclopiazonic acid, 153 — Biological activity of cyclopiazonic acid, 155 — Penitrem A, 158 — Environmental conditions favouring production of the toxin, 159 — References, 161 —

Chapter 8 — *PENICILLIUM RUBRUM* — RUBRATOXINS 163

by Paul M. Newberne

Growth of *Penicillium rubrum* and production of toxins, 165 — Physical and chemical properties of rubratoxins A and B, 167 — Biosynthesis, 169 — Analytical method, 170 — Biological activity, 170 — References, 179 —

Chapter 9 — STACHYBOTRYS AND STACHYBOTRYOTOXICOSIS . 181

by Joseph V. Rodricks and Robert M. Eppley

Stachybotryotoxicosis in farm animals and man, 181 — Biological tests for toxic Stachybotrys, 184 — (A) Dermal toxicity, 184 — (B) Animal feeding studies, 185 — (C) Other types of biological activity, 188 — Metabolites of Stachybotrys, 189 — Toxic effects of 12,13-epoxy- Δ^9 -trichothecenes, 194 — Conclusion, 195 — References, 196 —

Chapter 10 — TOXIC TRICHOTHECENES199

by Eugene B. Smalley and Frank M. Strong

Chemical nature, 199 — Production, 200 — (A) Trichothecene-producing fungi, 200 — (B) Trichothecene production in culture, 206 — (C) Chemical synthesis, 208 — (D) Biosynthesis, 209 — Physical and chemical properties, 210 — (A) Spectra, 210 — (B) Chemical properties, 211 — Biological properties, 211 — (A) General toxicity, 211 — (B) Toxicology, 214 — (C) Metabolism and excretion, 215 — Analytical methods, 215 — (A) Biological methods, 215 — (B) Physical methods, 217 — Practical importance, 219 — (A) Natural occurrence and pathogenicity of trichothecene-producing fungi, 219 — (B) Role of trichothecene-producing fungi in mycotoxicoses, 220 — References, 224 —

Chapter 11 — TOXICITY OF *FUSARIUM POAE* AND *F. SPOROTRICHIOIDES* AND ITS RELATION TO ALIMENTARY TOXIC ALEUKIA 229

by A.Z. Joffe

Characterisation of the fungi, 229 — Methods of testing toxicity, 231 — The toxins, 233 — (a) Composition of the toxins, 233 — (b) Conditions of toxin formation, 235 — (c) Persistence of toxins, 239 — (d) Comparative toxicity of the two species to animals, 239 — Effects of the toxins on animals, man and plants, 241 — (a) Effects on animals, 241 — (b) Effects on man, 247 — (c) Effects on plants, 251 — (d) Relation between toxicity to animals and to plants, 255 — Aetiology, epidemiology and treatment of ATA, 256 — (a) Sources of toxins causing ATA, 256 — (b) Relation between toxicity of cereals and incidence of ATA, 256 — (c) Weather and the incidence of ATA, 257 — (d) Summary of factors affecting outbreaks of ATA, 259 — (e) Prophylaxis and treatment, 259 — References, 260 — Notes added in proof, 262 —

Chapter 12 — TRICHOTHECENE TOXINS OF *FUSARIUM* SPECIES . 263

by M. Saito and K. Ohtsubo

Outbreaks of disease attributable to the fungus, 264 — Toxic metabolites of the fungus, 265 — Chemistry of nivalenol, fusarenon-X and neosolaniol, 266 — Biosynthesis, 268 — Biological activity of the toxins, 271 — Mode of action of nivalenol and fusarenon-X, 278 — Acknowledgements, 279 — References, 279 —

Chapter 13 — CITREOVIRIDIN FROM *PENICILLIUM CITREO-VIRIDE* BIOURGE283

by Yoshio Ueno

Occurrence of cardiac beriberi, 284 — (I) Clinical symptoms, 284 — (II) Statistical evidence in Japan, 285 — (III) Occurrence, 290 — Toxic metabolite of *P. citreoviride*, 291 — Chemical properties of citreoviridin, 293 — Production, 293 — Analysis for citreoviridin, 296 — Distribution of the toxic fungi, 298 — Toxicology, 299 — References, 301 —

Chapter 14 — *PENICILLIUM ISLANDICUM* (TOXIC YELLOWED RICE) — LUTEOSKYRIN — ISLANDITOXIN — CYCLOCHLOROTINE . . 303

by Makoto Enomoto and Ikuko Ueno

Outbreaks of disease attributable to the fungus, 303 — Toxic metabolites of the fungus, 304 — Chemical and physical properties of metabolites, including structure,

306 — Biosynthesis of the toxic metabolites, 307 — Environmental and laboratory conditions favouring production of the toxic metabolites, 308 — Chemical analysis for the toxic metabolites, 308 — Luteoskyrin, 308 — Chlorine-containing peptide (cyclochlorotine), 310 — Natural occurrence of the toxic metabolites, 310 — Biological activity in experimental systems, 311 — Luteoskyrin, 311 — Cyclochlorotine, 317 — Toxicity of anthraquinone-type pigments, homologous to luteoskyrin, 318 — Mode of action of the toxic metabolites, 319 — Luteoskyrin, 319 — Cyclochlorotin, 322 — References, 323 —

Chapter 15 — TOXINS PRODUCED BY SWEET POTATO ROOTS INFECTED WITH *CERATOCYSTIS FIMBRIATA* AND *FUSARIUM SOLANI* 327

by Benjamin J. Wilson and Michael R. Boyd

Toxic metabolites produced by mould-damaged sweet potatoes, 328 — Chemical and physical properties of the toxins, 330 — Chemical synthesis of sweet potato toxins, 333 — Biosynthesis, 335 — Isolation and analysis, 337 — Natural occurrence and environmental conditions for bioproduction, 339 — Biological activities of the toxins in experimental systems and a consideration of the mode of action, 341 — Acknowledgement, 342 — References, 342 — Note added in proof, 344 —

Chapter 16 — OCHRATOXIN A AND RELATED METABOLITES . . 345

by J. Harwig

Outbreaks of disease attributable to *P. viridicatum* and *A. ochraceus*, 346 — Ochratoxin-producing fungi, 347 — Toxic metabolites of *A. ochraceus* and *P. viridicatum*, 349 — Laboratory and environmental conditions favouring ochratoxin A production, 352 — Natural occurrence of ochratoxin A, 358 — Biological activity of ochratoxins, 360 — Carcinogenic potential of ochratoxin A, 363 — References, 364 —

Chapter 17 — STERIGMATOCYSTIN 369

by J.J. van der Watt

Toxic metabolites, 370 — Chemical and physical properties of the toxic metabolites, 370 — Biosynthesis, 373 — Environmental and laboratory conditions favouring production of the toxic metabolites, 374 — Analysis for toxic metabolites, 375 — Natural occurrence, 376 — Biological activity in experimental systems, 376 — Mode of action, 380 — References, 381 —

Chapter 18 — PATULIN 383

by P.M. Scott

Mycotoxicooses associated with patulin-producing fungi, 383 — Physical and chemical properties of patulin, 384 — Biosynthesis, 387 — Substrates favouring patulin production, 388 — Analysis for patulin, 389 — Natural occurrence, 395 — Biological activity of patulin in experimental systems, 396 — References, 399 —

Chapter 19 — MALTORYZINE 405

by Hiroshi Iizuka

Formation of maltoryzine, 406 — (1) Preparation of malt rootlet extract, 406 — (2) Composition of malt rootlet extract media, 406 — (3) Seed cultures, 407 — (4) Tank culture, 407 — (5) Toxicity test, 407 — (6) Toxicity observed in the case of

tank culture, 407 — Extraction, purification and isolation of maltoryzine, 408 — (1) Concentration of cultured liquid, 408 — (2) Solubility of the precipitate, 408 — (3) Toxicity of the ethanol extract, 408 — (4) Toxicity of alkaline ether extract, 409 — (5) Toxicity of acid ether extract, 409 — (6) Paper chromatography, 409 — (7) Cellulose column partition chromatography, 411 — Physical and chemical properties, 411 — Decomposition of maltoryzine, 414 — (1) Ozonisation, 414 — (2) Ketonic decomposition, 415 — (3) Acid decomposition, 415 — (4) Structure of the side chain of maltoryzine, 417 — Chemical structure of maltoryzine, 417 — References, 417 —

Chapter 20 — MYCOTOXIC NEPHROPATHY419
by Palle Krogh

Mycotoxic porcine nephropathy, 419 — Clinical aspects, 419 — Pathology, 419 — Kidney function, 423 — Epidemiology, 423 — Aetiology, 424 — Public health aspects of nephrotoxic mycotoxins, 426 — References, 427 —

Subject Index429
