

CONTENTS

10 INTRODUCTION

LIFE

- 18 **A window into the body**
Experimental physiology

- 20 **How feebly men have laboured in the field of Anatomy from the times of Galen**
Anatomy

- 26 **Animals are machines**
Animals are not like humans

- 27 **I can make urea without kidneys**
Biochemicals can be made

- 28 **The true biological atom**
The cellular nature of life

- 32 **All cells come from cells**
How cells are produced

- 34 **Life is not a miracle**
Making life

- 38 **Smaller cells reside inside the larger cells**
Complex cells

- 42 **A flexible mosaic of gatekeepers**
Cell membranes

FOOD AND ENERGY

- 48 **Life is a chemical process**
Metabolism

- 50 **Plants have a faculty to correct bad air**
Photosynthesis

- 56 **The virtues of oranges and lemons**
Essential nutrients

- 58 **The conversion of victuals into virtues**
Digestion

- 60 **The saccharine, the oily, and the albuminous**
Food groups

- 61 **A better element does not exist on which to base life**
The beginnings of organic chemistry

- 62 **Life without free oxygen**
Fermentation

- 64 **Cells are chemical factories**
Enzymes as biological catalysts

- 66 **They must fit together like lock and key**
How enzymes work

- 68 **The metabolic pathway that releases energy from food**
Respiration

- 70 **Photosynthesis is the absolute prerequisite for all life**
Reactions of photosynthesis

TRANSPORT AND REGULATION

- 76 **It had a movement, as it were, in a circle**
Circulation of the blood

- 80 **Blood passes through many windings**
Capillaries

- 81 **The heart is simply a muscle**
The heart muscle

- 82 Plants imbibe and perspire**
Plant transpiration
- 84 Chemical messengers carried by the bloodstream**
Hormones trigger responses
- 86 The constant conditions might be termed equilibria**
Homeostasis

- 90 Air combining with the blood**
Haemoglobin
- 92 Oils upon the creaky machinery of life**
Hormones help regulate the body
- 98 The master chemists of our internal environment**
Kidneys and excretion
- 100 No auxin – no growth**
Plant growth regulators
- 102 The plant puts its fluids in motion**
Plant translocation

BRAIN AND BEHAVIOUR

- 108 The muscles contracted into tonic convulsions**
Excitable tissues
- 109 The faculty of sensation, perception, and volition**
The brain controls behaviour
- 110 Three principal colours, red, yellow, and blue**
Colour vision
- 114 We speak with the left hemisphere**
Speech and the brain
- 116 The spark excites the action of the nerveo-muscular force**
Electrical nerve impulses
- 118 Instinct and learning go hand in hand**
Innate and learned behaviour
- 124 Cells with delicate and elegant shapes**
Nerve cells
- 126 Brain maps of man**
Organization of the brain cortex
- 130 The impulse within the nerve liberates chemical substances**
Synapses
- 132 A complete theory of how a muscle contracts**
Muscle contraction
- 134 Memory makes us who we are**
Memory storage

- 136 The object is held with two paws**
Animals and tools

HEALTH AND DISEASE

- 142 Sickness is not sent by the gods**
The natural basis of disease
- 143 The dose makes the poison**
Drugs and disease
- 144 The microbes will have the last word**
Germ theory
- 152 The first object must be the destruction of any septic germs**
Antisepsis
- 154 Remove it, but it will spring up again**
Cancer metastasis

- 156 There are four different types of human blood**
Blood groups

158 A microbe to destroy other microbes
Antibiotics

160 A piece of bad news wrapped in protein
Viruses

164 There will be no more smallpox
Vaccination for preventing disease

168 Antibodies are the touchstone of immunological theory
Immune response

GROWTH AND REPRODUCTION

176 The little animals of the sperm
The discovery of gametes

178 Some organisms have dispensed with sexual reproduction
Asexual reproduction

180 A plant, like an animal hath organical parts
Pollination

184 From the most general forms the less general are developed
Epigenesis

186 The union of egg-cell and spermatic cell
Fertilization

188 The mother-cell divides equally between the daughter nuclei
Mitosis

190 On this, the resemblance of a child to its parent depends
Meiosis

194 First proof of the autonomy of life
Stem cells

196 Master control genes
Embryological development

198 The creation of the greatest happiness
In vitro fertilization

202 Dolly, the first clone of an adult animal
Cloning

INHERITANCE

208 Ideas of species, inheritance, variation
The laws of inheritance

216 The physical basis of heredity
Chromosomes

220 The X element
Sex determination

221 DNA is the transforming principle
The chemicals of inheritance

222 One gene – one enzyme
What are genes?

226 I could turn a developing snail's egg into an elephant
Jumping genes

228 Two interwoven spiral staircases
The double helix

232 DNA embodies the genetic code of all living organisms
The genetic code

234 A cut, paste, and copy operation
Genetic engineering

240 The sequence of the beast
Sequencing DNA

242 The first draft of the human book of life
The Human Genome Project

244 Genetic scissors: a tool for rewriting the code of life
Gene editing

DIVERSITY OF LIFE AND EVOLUTION

- 250 The first step is to know the things themselves**
Naming and classifying life
- 254 Relics of a primeval world**
Extinct species
- 256 Animals have in course of time been profoundly altered**
Life evolves
- 258 The strongest live and the weakest die**
Natural selection
- 264 Mutations yield new and constant forms**
Mutation
- 266 Natural selection spreads favourable mutations**
Modern synthesis
- 272 Drastic change occurs in an isolated population**
Speciation
- 274 All true classification is genealogical**
Cladistics

- 276 The clock-like property of evolution**
The molecular clock
- 277 We are survival machines**
Selfish genes
- 278 The extinction coincides with the impact**
Mass extinctions

ECOLOGY

- 284 All Bodies have some Dependence upon one another**
Food chains
- 286 Animals of one continent are not found in another**
Plant and animal biogeography
- 290 The interaction of habitat, life forms, and species**
Community succession
- 292 A competition between prey and a predatory species**
Predator-prey relationships
- 294 Living matter is incessantly moving, decomposing, and reforming**
Recycling and natural cycles
- 298 One will crowd out the other**
Competitive Exclusion Principle
- 299 The basic units of nature on Earth**
Ecosystems
- 300 Networks through which energy is flowing**
Trophic levels

- 302 An organism's niche is its profession**
Niches
- 304 Man's war against nature is inevitably war against himself**
Human impact on ecosystems
- 312 Division of area by ten divides the fauna by two**
Island biogeography
- 314 Gaia is the superorganism composed of all life**
The Gaia hypothesis
