

CONTENTS

10 INTRODUCTION

MEASUREMENT AND MOTION

PHYSICS AND THE EVERYDAY WORLD

- 18 Man is the measure of all things**
Measuring distance
- 20 A prudent question is one half of wisdom**
The scientific method
- 24 All is number**
The language of physics
- 32 Bodies suffer no resistance but from the air**
Free falling
- 36 A new machine for multiplying forces**
Pressure
- 37 Motion will persist**
Momentum

- 38 The most wonderful productions of the mechanical arts**
Measuring time
- 40 All action has a reaction**
Laws of motion
- 46 The frame of the system of the world**
Laws of gravity
- 52 Oscillation is everywhere**
Harmonic motion
- 54 There is no destruction of force**
Kinetic energy and potential energy
- 55 Energy can be neither created nor destroyed**
The conservation of energy
- 56 A new treatise on mechanics**
Energy and motion
- 58 We must look to the heavens for the measure of the Earth**
SI units and physical constants

ENERGY AND MATTER

MATERIALS AND HEAT

- 68 The first principles of the Universe**
Models of matter
- 72 As the extension, so the force**
Stretching and squeezing

- 76 The minute parts of matter are in rapid motion**
Fluids
- 80 Searching out the fire-secret**
Heat and transfers
- 82 Elastical power in the air**
The gas laws
- 86 The energy of the Universe is constant**
Internal energy and the first law of thermodynamics
- 90 Heat can be a cause of motion**
Heat engines
- 94 The entropy of the Universe tends to a maximum**
Entropy and the second law of thermodynamics
- 100 The fluid and its vapour become one**
Changes of state and making bonds
- 104 Colliding billiard balls in a box**
The development of statistical mechanics
- 112 Fetching some gold from the Sun**
Thermal radiation

ELECTRICITY AND MAGNETISM

TWO FORCES UNITE

- 122 Wondrous forces**
Magnetism
- 124 The attraction of electricity**
Electric charge
- 128 Potential energy becomes palpable motion**
Electric potential
- 130 A tax on electrical energy**
Electric current and resistance
- 134 Each metal has a certain power**
Making magnets
- 136 Electricity in motion**
The motor effect
- 138 The dominion of magnetic forces**
Induction and the generator effect
- 142 Light itself is an electromagnetic disturbance**
Force fields and Maxwell's equations
- 148 Man will imprison the power of the Sun**
Generating electricity
- 152 A small step in the control of nature**
Electronics
- 156 Animal electricity**
Bioelectricity
- 157 A totally unexpected scientific discovery**
Storing data

- 158 An encyclopedia on the head of a pin**
Nanoelectronics
- 159 A single pole, either north or south**
Magnetic monopoles

SOUND AND LIGHT

THE PROPERTIES OF WAVES

- 164 There is geometry in the humming of the strings**
Music
- 168 Light follows the path of least time**
Reflection and refraction
- 170 A new visible world**
Focusing light
- 176 Light is a wave**
Lumpy and wave-like light
- 180 Light is never known to bend into the shadow**
Diffraction and interference
- 184 The north and south sides of the ray**
Polarization
- 188 The trumpeters and the wave train**
The Doppler effect and redshift

- 192 These mysterious waves we cannot see**
Electromagnetic waves

- 196 The language of spectra is a true music of the spheres**
Light from the atom

- 200 Seeing with sound**
Piezoelectricity and ultrasound

- 202 A large fluctuating echo**
Seeing beyond light

THE QUANTUM WORLD

OUR UNCERTAIN UNIVERSE

- 208 The energy of light is distributed discontinuously in space**
Energy quanta
- 212 They do not behave like anything that you have ever seen**
Particles and waves
- 216 A new idea of reality**
Quantum numbers
- 218 All is waves**
Matrices and waves
- 220 The cat is both alive and dead**
Heisenberg's uncertainty principle

222 Spooky action at a distance
Quantum entanglement

224 The jewel of physics
Quantum field theory

226 Collaboration between parallel universes
Quantum applications

NUCLEAR AND PARTICLE PHYSICS

INSIDE THE ATOM

236 Matter is not infinitely divisible
Atomic theory

238 A veritable transformation of matter
Nuclear rays

240 The constitution of matter
The nucleus

242 The bricks of which atoms are built up
Subatomic particles

244 Little wisps of cloud
Particles in the cloud chamber

246 Opposites can explode
Antimatter

247 In search of atomic glue
The strong force

248 Dreadful amounts of energy
Nuclear bombs and power

252 A window on creation
Particle accelerators

256 The hunt for the quark
The particle zoo and quarks

258 Identical nuclear particles do not always act alike
Force carriers

260 Nature is absurd
Quantum electrodynamics

261 The mystery of the missing neutrinos
Massive neutrinos

262 I think we have it
The Higgs boson

264 Where has all the antimatter gone?
Matter-antimatter asymmetry

265 Stars get born and die
Nuclear fusion in stars

RELATIVITY AND THE UNIVERSE

OUR PLACE IN THE COSMOS

270 The windings of the heavenly bodies
The heavens

272 Earth is not the centre of the Universe
Models of the Universe

274 No true times or true lengths
From classical to special relativity

275 The Sun as it was about eight minutes ago
The speed of light

276 Does Oxford stop at this train?
Special relativity

280 A union of space and time
Curving spacetime

281 Gravity is equivalent to acceleration
The equivalence principle

282 Why is the travelling twin younger?
Paradoxes of special relativity

284 Evolution of the stars and life
Mass and energy

286 Where spacetime simply ends
Black holes and wormholes

290 The frontier of the known Universe
Discovering other galaxies

294 The future of the Universe
The static or expanding Universe

296 The cosmic egg, exploding at the moment of creation
The Big Bang

302 Visible matter alone is not enough
Dark matter

306 An unknown ingredient dominates the Universe
Dark energy

308 Threads in a tapestry
String theory

312 Ripples in spacetime
Gravitational waves

316 DIRECTORY
