1	Introduction to the Proteome.	1
	<i>Keith L. Williams and Denis F. Hochstrasser</i>	
1.1	Proteome: a new word, a new field of biology	1
1.2	The proteome and technology.	5
1.2.1	Thinking in two dimensions	6
1.2.2	Further dimensions in protein analysis	8
1.2.3	Information and the proteome.	9
1.3	Looking towards new frontiers.	10
	Acknowledgments	11
	References.	11
 2	 Two-Dimensional Electrophoresis: The State of the Art and Future Directions.	 13
	<i>Ben R. Herbert, Jean-Charles Sanchez and Luca Bini</i>	
2.1	Introduction.	13
2.2	Sample preparation	15
2.2.1	Increasing protein solubility with chaotropes and surfactants	15
2.2.2	The choice of reducing agent	16
2.2.3	Removal of nucleic acids	16
2.3	Sample loading on IPG gels	18
2.3.1	Sample application during IPG rehydration	18
2.4	Low abundance proteins	19
2.4.1	Cell fractionation and protein prefractionation.	20
2.4.2	High protein loads combined with narrow pH gradients	21
2.4.3	Sensitive detection	22
2.5	Basic proteins	24
2.5.1	Separation of basic proteins on IPG gels	24
2.6	Protein quantitation.	25
2.7	Future directions for 2-D PAGE	26
2.7.1	Simplifying the IPG-SDS-PAGE interface.	27
2.7.2	Fluorescent protein detection	28
2.7.3	High throughput 2-D PAGE	28
2.8	Conclusion	29
	Acknowledgments	29
	References.	30

3	Protein Identification in Proteome Projects	35
	<i>Marc R. Wilkins and Andrew A. Gooley</i>	
3.1	The purpose of protein identification	35
3.2	An overview of protein identification strategies.	36
3.3	Primary attributes for protein identification	38
3.3.1	Protein species of origin	38
3.3.2	Protein isoelectric point	38
3.3.3	Protein apparent mass and mass	40
3.3.4	Protein N- and C-terminal sequence tags	41
3.3.5	Extensive N-terminal protein sequence	45
3.4	Secondary attributes for protein identification	46
3.4.1	Attributes of peptides from mass spectrometry	46
3.4.2	Protein amino acid composition	54
3.5	Cross-species protein identification	56
3.6	Future developments and conclusions	60
	Acknowledgments	60
	References.	61
4	The Importance of Protein Co- and Post-Translational Modifications in Proteome Projects	65
	<i>Andrew A. Gooley and Nicolle H. Packer</i>	
4.1	Introduction.	65
4.2	An overview of modifications: what are they and where do they occur?.	68
4.3	Modifications that influence protein charge on 2-D PAGE	70
4.4	Analysis of co- and post-translational modifications after 2-D PAGE.	70
4.4.1	Presentation of the modified protein.	70
4.4.2	Detection of co- and post-translational modifications	74
4.4.3	Analysis of co- and post-translational modifications	76
4.4.4	Mass spectrometry perspectives in the analysis of protein co- and post-translational modifications	83
4.5	Future directions	86
	Acknowledgments	86
	References.	86
5	Proteome Databases	93
	<i>Amos Bairoch</i>	
5.1	Introduction.	93
5.2	Protein sequence databases.	93
5.2.1	SWISS-PROT	95
5.2.2	TrEMBL	100
5.2.3	Completeness and non-redundancy issues	100
5.2.4	Specialised protein sequence databases	102
5.3	Nucleotide sequence databases.	103
5.3.1	Hidden treasures	107
5.4	Pattern and profile databases	108

5.4.1	PROSITE	109
5.4.2	BLOCKS.....	110
5.4.3	PRINTS.....	112
5.4.4	Pfam	112
5.4.5	Other protein domain databases	112
5.4.6	Towards a unified database of protein families and domains.....	114
5.5	2-D PAGE databases.....	114
5.5.1	SWISS-2DPAGE	115
5.5.2	Other 2-D PAGE databases	116
5.6	Three-dimensional structure databases.....	116
5.6.1	PDB.....	117
5.6.2	Swiss-3DImage.....	119
5.6.3	DSSP, HSSP and FSSP.....	119
5.7	Post-translational modification databases.....	119
5.7.1	O-GLYCBASE.....	120
5.8	Genomic databases	120
5.8.1	OMIM.....	121
5.9	Metabolic databases	123
5.9.1	Some specific metabolic databases.....	124
5.10	Conclusions.....	125
5.10.1	How to access all of this data	125
5.10.2	What future for protein databases?.....	126
	References.....	129
