

Contents

Introduction	3
GP1 - Protocols for the evaluation of alloys to be used as replacements for high temperature Pb-containing solders in products & industrial processes (GP8)	
Group Project Leader: Stuart A. Mucklejohn	5
GP2 - Sb-Sn-X alloy systems for high-temperature soldering applications	
Group Project Leader: Gabriella Borzone, Section edited by G. Borzone and S. Delsante	25
GP3 - Design, process and control in a multiscale domain of Cu-Ni-X-Y (X, Y=Sn, Bi, Zn, Ti) based alloys	
Group Project Leader: Georgui P. Vassilev	59
GP4 - Thermodynamics and Phase Equilibria in the Ag-Cu-Ni-P-Sn system	
Group Project Leader: Alan Dinsdale	87
GP5 - Modeling and experimental investigation of the microstructural changes in the interdiffusion zone of leadfree solder joints	
Group Project Leader: Nele Moelans	109
GP5a - "Nanojoining" as an alternative concept for high-temperature solder joints for microelectronics	
Group Project Leader: Nele Moelans, Section edited by J. Janczak-Rush	181
GP6 - Experimental and theoretical study of thermodynamic properties and phase equilibria in ternary Al-Zn-X alloys	
Group Project Leader: Pavel Brož	193
GP7 - Lead-free solder joints quality, functionality and reliability as function of HISOLD materials soldering on different pad finishes for different soldering process parameters, HISOLD 4P-Q&R	
Group Project Leader: Ioan Plotog	215
GP8 - Experimental and theoretical study of the Al-Sn-Zn system	
Group Project Leader: Jürgen Villain	243
GP9 – AuGe based alloys as potential high temperature lead free solders	
Group Project Leader: Christian Leinenbach	281
