

Contents

1	Introduction	1
1.1	Sizes, Numerical Values, Units	2
1.2	Important Relationships	3
1.2.1	Mathematical Rules	3
1.2.2	Force, Pressure, Work, Heat, Energy and Power	4
1.2.3	More Relationships	4
1.2.4	Efficiency	4
1.2.5	Averaging	5
2	Basics and Formula Collection	7
2.1	Ideal Gas Law	7
2.2	Law of Mass Action	8
2.2.1	Equilibrium Reactions	8
2.2.2	pH and pK_a Value, Buffer Solutions	9
2.2.3	Solubility Product	10
2.3	Material Balances	11
2.3.1	Mass Balances and Stoichiometric Balances	11
2.3.2	Yield, Selectivity and Conversion	12
2.3.3	Reaction Rate	15
2.4	Heat	17
2.4.1	Heating and Cooling	18
2.4.2	Melting and Vaporization Heat	19
2.4.3	Solution Heat	20
2.4.4	Heat of Reaction and Reaction Enthalpy	20
2.4.5	Heat Conduction	22
2.4.6	Heat Balances	24
2.4.7	Thermal Reactor Stability Criteria	25
2.4.8	Thermal Expansion	27
2.5	Electrochemistry	28
2.6	Liquid Conveying	29
2.7	Scale-up	31
2.7.1	Scale-up Factor	32
2.7.2	Dimensionless Parameters	32

3 Exercise Problems	33
3.1 Ideal Gas Law	34
3.2 Law of Mass Action	40
3.2.1 Equilibrium reactions	40
3.2.2 pH Value	50
3.2.3 Solubility Product	54
3.3 Material Balances	59
3.3.1 Mass Balances and Stoichiometric Balances	59
3.3.2 Conversion, Yield and Selectivity	64
3.3.3 Reaction Rate	71
3.4 Heat	84
3.4.1 Heating, Melting, Vaporizing, Dissolving	84
3.4.2 Calculation of the Reaction Enthalpy from Formation Enthalpies	96
3.4.3 Heating Value/Calorific Value	104
3.4.4 Heat Transfer	109
3.4.5 Heat Balances	122
3.4.6 Reactor Stability Criteria	134
3.4.7 Thermal Expansion	142
3.5 Electrochemistry	145
3.6 Liquid Conveying	150
3.7 Scale Enlargement	161
3.8 Combined Tasks	175
