Introduction	vii
--------------	-----

Part I Mathematical Analysis

1	Variables and Functions	1
2	Graphs of Functions	12
3	Economic Applications of Functions and Graphs	34
4	Systems of Equations	55
5	Fundamentals of Matrix Algebra	76
6	Limits and Derivatives	100
7	Economic Applications of Derivatives	130
8	Maxima and Minima of Functions of One Variable	149
9	Partial Derivatives and Their Applications	169
10	Maxima and Minima of Functions of Several Variables	185
11	Elements of Integral Calculus	209

Part II From Mathematics to Statistics

12	Static Models	229
13	Dynamic Models	255
14	The Problem of Uncertainty	280
15	Elements of Probability Theory	294
16	Sampling Theory and Statistical Inference	325

Part III Econometrics

17	Simple Regression and Correlation	355
18	Economic Applications of Simple Regression	385
19	Multiple Regression and Correlation	408
20	Economic Applications of Multiple Regression	438
21	Problems of Economic Time Series	463
22	Simultaneous Equations Models: Two Endogenous Variables	491
23	Simultaneous Equations Models: Three or More Endogenous Variables	522
24	Postscript to Econometrics	546
