

# Contents

<i>Preface</i>	vii
<b>1. Introduction</b>	<b>1</b>
<b>2. Static Mechanical Properties</b>	<b>7</b>
2.1 Force vs. Stress	8
2.2 Elongation/Deformation vs. Strain	19
2.3 The Relationship between Stress and Strain	22
2.4 Elastic vs. Plastic Deformation	25
2.5 Ductile vs. Brittle Materials	35
2.6 Stress Concentrations	36
2.7 Internal Stresses	39
<b>3. Dynamic Mechanical Properties</b>	<b>45</b>
3.1 Shock	45
3.2 Cyclic Loading: Definitions	48
3.3 Cyclic Loading: Damage Accumulation	52
3.4 Cyclic Loading: Vibrations	55
3.5 Units for Shock and Cyclic Loading	58
3.5.1 Stress $\sigma$ and Strain $\epsilon$	58
3.5.2 $g$ and $g$ -Force	58
3.5.3 Velocity	59
3.5.4 Displacement	60
3.5.5 Acceleration	61
3.5.6 Power Spectral Density	61
3.5.7 Which Parameter?	61
3.6 Cyclic Loads: Mixed Shock and Vibration	62
3.7 Cyclic Loads: Resonance	69

<b>4. Mechanical Testing</b>	<b>71</b>
4.1 Tensile Testing	72
4.1.1 Tensile Testing Equipment	72
4.1.2 The Tensile Test	75
4.1.3 Tensile Specimen Design Considerations	77
4.2 Internal Stresses	89
4.3 Fatigue Testing	92
4.4 Vibration Testing	95
4.5 Shock Testing	98
4.6 Testing of Consolidants and Adhesives: Shear and Peel Testing	99
<b>5. Advanced Concepts</b>	<b>109</b>
5.1 Stress Relaxation and Creep	110
5.1.1 Stress Relaxation	110
5.1.2 Creep	113
5.2 Crack Growth and Fracture Mechanics	115
5.3 Stress-Environmental Interactions	123
5.4 Friction and Wear	125
5.4.1 Friction	125
5.4.2 Wear	131
5.4.3 Lubrication	134
5.5 Life Prediction for Vibrations and Other Complex Cyclic Loads	134
5.6 Computer Modelling and Finite Element Analysis	140
<b>Epilogue</b>	<b>145</b>
<i>Appendix</i>	147
<i>Index</i>	149
