# Confusing Textbooks? Missed Lectures? Tough Test Questions?

**Fortunately, there's Schaum's.**

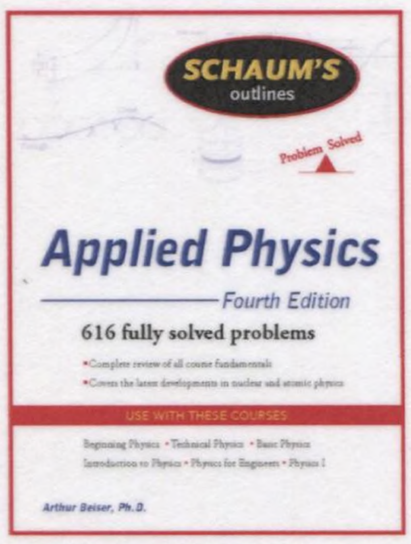
More than 40 million students have trusted Schaum's to help them succeed in the classroom and on exams. Schaum's is the key to faster learning and higher grades in every subject. Each Outline presents all the essential course information in an easy-to-follow, topic-by-topic format. You also get hundreds of examples, solved problems, and practice exercises to test your skills.

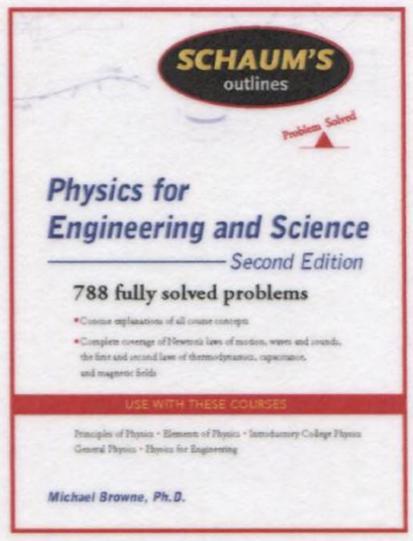
**This Schaum's Outline gives you**

- More than 200 fully solved problems
- Concise explanations of all course concepts
- Exercises to help you test your mastery of quantum mechanics

Don't miss these

SCHAUM'S outlines™





***Fully compatible with your classroom text, Schaum's highlights all the important facts you need to know. Use Schaum's to shorten your study time—and get your best test scores!***

***Schaum's Outlines—Problem Solved.***

**CHAPTER 1 Introduction** **1**

**1.1** The Particle Nature of Electromagnetic Radiation **1.2** Quantum Particles **1.3** Wave Packets and the Uncertainty Relation

**CHAPTER 2 Mathematical Background** **13**

**2.1** The Complex Field *C* **2.2** Vector Spaces over *C* **2.3** Linear Operators and Matrices **2.4** Eigenvectors and Eigenvalues **2.5** Fourier Series and the Fourier Transform **2.6** The Dirac Delta Function

**CHAPTER 3 The Schrödinger Equation and Its Applications** **25**

**3.1** Wavefunctions of a Single Particle **3.2** The Schrödinger Equation **3.3** Particle in a Time-Independent Potential **3.4** Scalar Product of Wavefunctions: Operators **3.5** Probability Density and Probability Current

**CHAPTER 4 The Foundations of Quantum Mechanics** **61**

**4.1** Introduction **4.2** Postulates in Quantum Mechanics **4.3** Mean Value and Root-Mean-Square Deviation **4.4** Commuting Observables **4.5** Function of an Operator **4.6** Hermitian Conjugation **4.7** Discrete and Continuous State Spaces **4.8** Representations **4.9** The Time Evolution **4.10** Uncertainty Relations **4.11** The Schrödinger and Heisenberg Pictures

**CHAPTER 5 Harmonic Oscillator** **98**

**5.1** Introduction **5.2** The Hermite Polynomials **5.3** Two- and Three-Dimensional Harmonic Oscillators **5.4** Operator Methods for a Harmonic Oscillator

**CHAPTER 6 Angular Momentum** **117**

**6.1** Introduction **6.2** Commutation Relations **6.3** Lowering and Raising Operators **6.4** Algebra of Angular Momentum **6.5** Differential Representations **6.6** Matrix Representation of an Angular Momentum **6.7** Spherical Symmetry Potentials **6.8** Angular Momentum and Rotations

**CHAPTER 7 Spin** **145**

**7.1** Definitions **7.2** Spin 1/2 **7.3** Pauli Matrices **7.4** Lowering and Raising Operators **7.5** Rotations in the Spin Space **7.6** Interaction with a Magnetic Field

**CHAPTER 8 Hydrogen-like Atoms** 164

**8.1** A Particle in a Central Potential **8.2** Two Interacting Particles **8.3** The Hydrogen Atom **8.4** Energy Levels of the Hydrogen Atom **8.5** Mean Value Expressions **8.6** Hydrogen-like Atoms

**CHAPTER 9 Particle Motion in an Electromagnetic Field** 179

**9.1** The Electromagnetic Field and Its Associated Potentials **9.2** The Hamiltonian of a Particle in the Electromagnetic Field **9.3** Probability Density and Probability Current **9.4** The Magnetic Moment **9.5** Units

**CHAPTER 10 Solution Methods in Quantum Mechanics—Part A** 204

**10.1** Time-Independent Perturbation Theory **10.2** Perturbation of a Non-degenerate Level **10.3** Perturbation of a Degenerate State **10.4** Time-Dependent Perturbation Theory

**CHAPTER 11 Solution Methods in Quantum Mechanics—Part B** 232

**11.1** The Variational Method **11.2** Semiclassical Approximation (The WKB Approximation)

**CHAPTER 12 Numerical Methods in Quantum Mechanics** 249

**12.1** Numerical Quadrature **12.2** Roots **12.3** Integration of Ordinary Differential Equations

**CHAPTER 13 Identical Particles** 264

**13.1** Introduction **13.2** Permutations and Symmetries of Wavefunctions **13.3** Bosons and Fermions

**CHAPTER 14 Addition of Angular Momenta** 273

**14.1** Introduction **14.2** $\{\hat{\mathbf{J}}_1^2, \hat{\mathbf{J}}_2^2, \hat{\mathbf{J}}^2, \hat{\mathbf{J}}_z\}$ Basis **14.3** Clebsch–Gordan Coefficients

**CHAPTER 15 Scattering Theory** 296

**15.1** Cross Section **15.2** Stationary Scattering States **15.3** Born Approximation **15.4** Partial Wave Expansions **15.5** Scattering of Identical Particles

**CHAPTER 16 Semiclassical Treatment of Radiation** 330

**16.1** The Interaction of Radiation with Atomic Systems **16.2** Time-Dependent Perturbation Theory **16.3** Transition Rate **16.4** Multipole Transitions **16.5** Spontaneous Emission

**APPENDIX Mathematical Appendix** 347

**A.1** Fourier Series and Fourier Transform **A.2** The Dirac $\delta$-Function **A.3** Hermite Polynomials **A.4** Legendre Polynomials **A.5** Associated Legendre Functions **A.6** Spherical Harmonics **A.7** Associated Laguerre Polynomials **A.8** Spherical Bessel Functions

**Index** 355
