I Relationship of wheelset and track	6
1.1 Basic terms	6
1.1.1 Wheel profile	6
1.1.2 Rail profile	8
1.1.3 Gauge clearance	9
1.2 Characteristics of wheel/rail contact geometry	9
1.2.1 Position of contact points on wheels and rails	10
1.2.2 Delta-r function (Roll radius difference)	11
1.2.3 Effective conicity	12
1.2.4 Tangent gamma function (Contact angles difference)	12
1.2.5 Equivalent conicity	13
2 Vehicle run in a straight track	16
2.1 Motion of free wheelset in a straight track	16
2.1.1 Situation for conical wheel profile	17
2.1.2 Situation for curvilinear wheel profile	18
2.2 Motion of wheelset coupled to frame	20
3 Vehicle run through a curve	23
3.1 Vehicle in a curve	23
3.2 Transition curves and superelevation ramps	26
3.3 Lateral effects in a vehicle	28
3.4 Vehicles with tilting technology	30
3.4.1 Vehicles with passive tilting technology	30
3.4.2 Vehicles with active tilting technology	31
3.5 Vehicle guiding through a curve	34
3.5.1 Vogel's method	35
3.5.2 Heumann's method	36
3.5.3 Forces acting on frame	40
3.5.4 Creep velocity and creepage	42
3.6 Safety against derailment	44
3.6.1 Deviations and changes of wheel forces	46
3.6.2 Change of wheel forces of a two-axle vehicle on twisted track	47
3.6.3 Verification of the safety against derailment	51
4 Rail vehicle suspension	61
4.1 Requirements on the suspension	61
4.2 Suspension elements	63
4.2.1 Springs	63
4.2.2 Dampers	74
4.3 Theory of carbody suspension	76
