

CONTENTS

Preface.....	3
1. Legislative and theoretical framework.....	7
1.1. Road tax.....	7
1.2. Registration tax	8
1.3. Environmental tax in the Czech Republic.....	9
1.4. Toll	10
2. Collection of road tax in the Czech Republic and derived characteristics...	12
3. Effectiveness of road tax.....	24
3.1. Direct administrative costs	26
3.2. Effective tax administration	31
3.3. Indirect administrative costs	32
3.4. Excessive tax burden.....	33
4. Structure and age of the fleet in the Czech Republik	35
5. Access to EU taxation of motor vehicles.....	36
5.1. Legislative regulation in the EU	36
5.2. Development and present taxation of motor vehicles in the EU	38
5.3. Advantages and disadvantages of taxation systems of motor vehicles.....	46
6. Construction environmental road tax in the Czech republic	53
6.1. Function suitable for fullfilment by taxation of road motor vehicles	54
6.2. Selection of the model of taxation of road vehicles.....	56

7. Registry of motor vehicles in the Czech Republic	60
8. Introduction of taxation according to CO ₂ in the Czech Republic	62
8.1. Vehicle taxation with the existence of emission data	62
8.2. Unavailability of emission values of older vehicles	63
8.2.1. Identification of optimal taxation implemented by the model	64
8.2.2. Defining relations for the quantification of emission data	66
8.2.2.1. Identifying appropriate variables	67
8.2.2.2. Model with the inclusion of the time factor	73
8.2.2.3. Confronting models using direct relation and square root variables	78
8.2.2.4. Variables reflecting the age of the vehicle to the square root of the model	81
8.2.2.5. Evaluation of a tiered model setting emission values	82
8.2.2.6. Model excluding frequency of vehicles	85
8.3. Defining relations for the practical application of the model	87
9. Taxation of trucks	91
10. References	97
11. Summary	105
