<b>INTRODUCTION</b>	8
<b>MATERIAL</b>	9
<b>I. ASSESSMENT OF DEVELOPMENT</b>	11
I. 1. Construction and use of percentile curves	12
I. 2. Method of assessment of selected bodily parameters	15
I. 3. Comments on percentile figures	20
I. 4. Percentile figures and tables (height, weight-height ratio, BMI, head circumference, arm circumference, selected skinfolds, sum of four skinfolds and body fat ratio)	27
I. 5. BMI and Matiegka's equations	74
I. 6. Conversion table of values of skinfold thicknesses assessed by a Best caliper to values of a Harpenden caliper	79
I. 7. Prediction of final body height of an individual	81
<b>II. CAUSES OF THE DEVELOPMENT OF OBESITY, ITS RISKS AND SELECTED CHARACTERISTICS OF OBESE CZECH CHILDREN</b>	87
II. 1. Obesity in childhood	88
II. 2. Genetic predisposition for human obesity	93
II. 3. Prevalence of excessive and low body weight in the contemporary child population, lifestyle and dietary habits of children	102
II. 4. Somatic habitus and some risk factors of Czech obese children and adolescents	113
II. 5. Spa treatment of obesity in children and adolescents	126
<b>CONCLUSION</b>	130
