

CONTENTS

FUNCTIONS USED IN THE TEXT	7
<i>Chapter 1. INTRODUCTION</i>	9
<i>Chapter 2. DEFINITIONS AND MATHEMATICAL PRELIMINARIES</i>	13
2.1 Complex value representation of real polychromatic fields	13
2.2 Correlation functions and properties	16
2.3 Elementary ideas of temporal and spatial coherence	25
2.4 Quasi-monochromatic approximation	30
<i>Chapter 3. SECOND-ORDER COHERENCE</i>	32
3.1 Interference law for two partially coherent beams	32
3.2 Propagation laws of partial coherence	36
3.3 Van Cittert-Zernike theorem	42
<i>Chapter 4. SOME GENERAL PROBLEMS OF THE SECOND-ORDER THEORY OF COHERENCE</i>	47
4.1 Mutual coherence function for incoherent radiation	47
4.2 Properties of coherent radiation	48
4.3 Concept of cross-spectral purity of light	52
4.4 Determination of the spectrum from measurements of the visibility of interference fringes — phase problem of coherence theory	55
<i>Chapter 5. MATRIX DESCRIPTION OF PARTIAL COHERENCE</i>	63
5.1 Sampling theorem	63
5.2 Interference law in matrix form	65
5.3 Intensity matrix and its properties	66
5.4 Propagation law of partial coherence in matrix form	72
5.5 The entropy of light beams	73
5.6 Generally covariant formulation of partial coherence	74
<i>Chapter 6. POLARIZATION PROPERTIES OF LIGHT</i>	77
6.1 Definitions of coherence matrix and Stokes parameters	77
6.2 Matrix description of non-image-forming optical elements	80
6.3 Interference law	83
6.4 Unpolarized and polarized light	85
6.5 Degree of polarization	86
6.6 Probability interpretation of the eigenvalues of the coherence matrix	87

6.7 Operational definition of coherence matrix and Stokes parameters	88
6.8 Analogy of coherence matrix and density matrix of quantum mechanics	88
Chapter 7. FIELD EQUATIONS AND CONSERVATION LAWS FOR CORRELATION TENSORS	90
7.1 Definition of correlation tensors and their properties	90
7.2 Dynamical equations for correlation tensors	93
7.3 Second-order equations — wave equations — for the correlation tensors	95
7.4 Conservation laws for correlation tensors	96
7.5 Stationary fields	97
7.6 Cross-spectral tensors	98
7.7 Non-negative definiteness conditions for correlation tensors and cross-spectral tensors	99
Chapter 8. GENERAL CLASSICAL STATISTICAL DESCRIPTION OF THE FIELD	102
8.1 Stochastic description of light	103
8.2 Functional formulation	104
Chapter 9. SOME APPLICATIONS OF THE THEORY OF COHERENCE TO OPTICAL IMAGING	106
9.1 Spatial Fourier analysis of optical imaging — transfer functions for partially coherent light	106
9.2 Reconstruction of an object from its image and similarity between object and image	116
Chapter 10. FOURTH- AND HIGHER-ORDER COHERENCE PHENOMENA — SEMICLASSICAL TREATMENT	123
10.1 Photon-counting distribution	125
10.2 Determination of the integrated intensity distribution from the photon-counting distribution	130
10.3 Short-time measurements	134
10.4 Bunching effect of photons	139
10.5 Hanbury Brown-Twiss effect — Correlation interferometry of the fourth order	142
10.6 Higher-order coherence effects	148
Chapter 11. BASIC IDEAS OF THE QUANTUM THEORY OF THE ELECTROMAGNETIC FIELD	151
11.1 Quantum description of the field	152
11.2 Statistical states	156
11.3 Multimode description	158
11.4 Calculation of commutators of the field operators	158
11.5 Time development in quantum electrodynamics	160
Chapter 12. OPTICAL CORRELATION PHENOMENA	163
2.1 Quantum correlation functions	163

12.2 Quantum coherence	168
12.3 Quantum characteristic functional	174
12.4 Measurements for mixed-order correlation functions	174
<i>Chapter 13. COHERENT-STATE DESCRIPTION OF THE ELECTROMAGNETIC FIELD</i>	178
13.1 Coherent states of the electromagnetic field	178
13.2 Glauber-Sudarshan representation of the density matrix	188
13.3 The existence of the Glauber-Sudarshan quasi-probability Φ_N	199
13.4 Multimode description	208
13.5 Time development of the Glauber-Sudarshan quasi-probability Φ_N	209
<i>Chapter 14. RELATION BETWEEN THE QUANTUM AND CLASSICAL THEORIES OF COHERENCE</i>	213
14.1 Quantum and classical correlation functions	213
14.2 Photon-number and photon-counting distributions	214
<i>Chapter 15. STATIONARY CONDITIONS OF THE FIELD</i>	221
15.1 Time invariance properties of the correlation functions	221
15.2 Stationary conditions in phase space	223
<i>Chapter 16. ORDERING OF FIELD OPERATORS IN QUANTUM OPTICS</i>	226
16.1 Definition of Ω -ordering and the general decompositions of operators	227
16.2 Connecting relations for different orderings	234
16.3 Multimode description	239
16.4 Measurements corresponding to antinormally ordered products of field operators — quantum counters	248
<i>Chapter 17. SPECIAL STATES OF THE ELECTROMAGNETIC FIELD</i>	252
17.1 Chaotic (Gaussian) radiation	252
17.2 Laser radiation	264
17.3 Superposition of coherent and chaotic fields as a model of laser light statistics	277
<i>Chapter 18. INTERFERENCE OF INDEPENDENT LIGHT BEAMS</i>	289
CONCLUSION AND OUTLOOK	294
