

FOREWORD	4
4th PCNS COMMITTEES	5
Technical Program Committee	5
Organizing Committee	5
PCNS 2023 Compliance Declaration	9
4th PCNS PROGRAM AT A GLANCE	11
ORAL PRESENTATIONS	12
1. SESSION I. TECHNOLOGY & ROADMAPS	13
1.1. Improving High Voltage Power Modules With New Silicon Snubber Capacitor Technology	13
1.2. Feedback From Failure Analysis On Connectors Main Failure Modes - All Electronic Sectors	16
1.3. 3 VElectrical Double Layer Capacitors (EDLCs) Deliver Longer Useful Life	22
1.4. Quality Assessment and Lifetime Prediction of Base Metal Electrode Multilayer Ceramic Capacitors: Challenges and Opportunities	26
2. SESSION II. MATERIALS & PROCESSES	34
2.1. Responsible and Stable Tantalum Supply	35
2.2. Extending the Capacity and High Voltage Performance of Ta-Capacitors	39
2.3. Voltage Dependence of Ferroelectric Class 2 Multilayer Ceramic Capacitors	49
2.4. Thick Film on Steel Resistor Technology - Increasingly Power Dense & Demanding Applications	57
2.5. Assembly Technology of Electronic Components For E-Textiles	66
2.6. Unleashing the Power: Superior Properties of Fluorographene-Derived Materials for Energy Storage Applications	75
2.7. Crucial Parameters to Obtain A High-Performance Supercapacitor From Plastic Waste	84
2.8. Smart Textile Speaker	89
3. SESSION III. QUALITY & RELIABILITY	95
3.1. Climatic Reliability of Electronic Parts – Solution of the Challenge	96
3.2. Selecting MLCC's That Meet High Reliability Requirements of Medical Implantable Devices	106
3.3. De-Risking Plan at Cryogenic Temperatures for PETERCEM Microswitch	110
3.4. Ceramic Capacitors: Recent In-Orbit Failure And Proposed Way Forward	115
3.5. Derating and Technology in Solid Electrolytic and Polymer Tantalum Capacitors	123
3.6. Degradation of Aluminum and Tantalum Wet Electrolytic Capacitors during High Temperature Storage	129
4. SESSION IV. NEW DEVELOPMENT	141
4.1. High Energy Density NanoLam™ Capacitors for Use in Spacecraft Power Processing Units	142
4.2. Nanoscale Thinning of Metal-Coated Polypropylene Thin-Films By Helium-Ion Irradiation	151
4.3. Layer-By-Layer Printing: How We Fabricate the Next Generation of Nanocomposite Capacitors For More Efficient Power Electronics	158
4.5. Development of a New High-performance Polymer Aluminium Electrolytic Capacitor	162
5. SESSION V. APPLICATIONS	163
5.1. How To Select Gate Resistor – From Discrete To Back-Contact-Bondable Resistors	164
5.2. A Look at Modern Capacitors Used in Power-Conversion	166
5.3. Understanding the Influence of ESR and Ripple Current For the Capacitor Selection	172
5.4. Latest Generation of Emi Suppression Film Capacitors For Xev Systems	177
5.5. Advancement of power electronics through Ceramic Y-Capacitor Technology	187
BIOGRAPHIES	191
