<i>About the Illustrator: Maury Aaseng</i>	<i>xvii</i>
<i>Contributors</i>	<i>xix</i>
<i>Reviewers</i>	<i>xxi</i>
<i>Acknowledgments</i>	<i>xxiii</i>

SECTION 1. Neuroanatomical and Neurophysiological Foundations

CHAPTER 1. Introduction and Organization of Neuroscience Fundamentals in Communication Sciences and Disorders

Richard D. Andreatta

What Is Neuroscience?	3
What Is This Book About?	4
The View From 30,000 Feet Up	6
Overview of Section 1: Neuroanatomical and Neurophysiological Foundations	6
Overview of Section 2: Sensory Systems	7
Overview of Section 3: Motor Systems	8
Overview of Section 4: Neural Substrates of Speech, Language, and Hearing	8
Study Strategies and Tips	9
Closing Thoughts	10

CHAPTER 2. Basic Structure and Function of Neurons

Richard D. Andreatta

Introduction and Learning Objectives	13
Discovery of Two Classes of Cells in the Nervous System	14
The Neuron	15
Neurons Are Made for Signaling and Communication	15
Neurons Never Function Alone	15
Neurons Perform Fundamental Activities	17
Reflexes Provide a Window Into the Fundamental Operation of Neural Networks	18
Nerve Cells Have Different Shapes, Sizes, and Functions	20

Structural Features of the Neuron	21
Soma, Cell Membrane, and Cytoskeleton	21
Cytoplasm	23
Mitochondria	24
Smooth and Rough Endoplasmic Reticulum	24
Golgi Apparatus	25
The Nucleus Mediates the Process of Gene Expression	25
Axons and Dendrites	29

The Glial Cell	33
Glial Cells Are Divided Into Two Major Functional Groups	33

Conclusion	36
The Top Ten List	38
Chapter 2 Abbreviations	39
Study Questions and Activities	39
References	40

CHAPTER 3. Basics of Neural Signaling and Synaptic Function

Richard D. Andreatta

Introduction and Learning Objectives	41
Foundations of Neural Signaling: The Nature of Information in the Nervous System	42
Electronics 101	42
Gradients: Putting Substances Into Motion	42
Developing an Electrical Gradient	43
Voltage, Current, and Resistance	44
The Fluid Environment of the Neuron: Intracellular and Extracellular Composition	47
Ion Channels: Tunnels Across the Neuron's Cell Membrane	48
Ion Channels Can Control the Motion of Ions	49
Ion Channels Can Gate Ionic Current in Three Ways	50
Some Ion Channels Are Always Open	52
Ion Pumps Are Active Transporters of Ions Across the Neuron's Cell Membrane	53
Understanding Membrane Potentials	54

Membrane Voltages Are Created by a Separation of Charges	56	Anatomical Orientations	103
V_m Can Be Changed by Ionic Gradients and Currents	56	Anatomical Planes	104
Development of the Neuron's Resting Membrane Potential	58	Gray Versus White Matter in the Nervous System	105
The Action Potential	62	Gray Matter in the CNS and PNS	105
Voltage-Gated Ion Channels Are Chiefly Responsible for AP Generation	64	White Matter Consists of Bundles of Axons	107
Voltage-Gated Na^+ and K^+ Channels Differ in Their Opening Speed	65	A Brief Tour of the Embryologic Development of the Nervous System	109
The Action Potential in "Action"	65	The Human Embryo Is a Multilayered Collection of Cells	109
Propagation of the Action Potential Down the Axon	67	Neural Crest and Neural Tube Cells Differentiate Into the PNS and CNS	109
Synapses: The Point of Communication Between Neurons	71	Major Anatomical Structures and Functions of the Human Central Nervous System	112
Electrical Synapses Allow for Virtually Instantaneous Signal Transmission	72	The Skull and Vertebral Column House and Protect the Tissues of the CNS	113
Chemical Synapses: The Workhorse of the Nervous System	72	The Spinal Cord	115
Structure of the Chemical Synapse	74	External Spinal Cord Structures	116
Chemical Synapse Function: Transmission Phase	76	Internal Spinal Cord Structures: Gray Matter	119
Chemical Synapse Function: Receptive Phase	78	Internal Spinal Cord Structure: White Matter	121
Postsynaptic Receptors Belong to Two Different Functional Classes	78	The Brainstem: An Overview	123
Ending Chemical Synaptic Transmission: "Cleaning Up After the Party"	83	The Medulla	126
Neurotransmitters Can Be Divided Into a Handful of Chemical Classes	84	Medulla: External Features	128
A Few Final Words on Neurotransmission	87	Medulla: Internal Features	130
Neural Integration: Closing (and Opening) the Neural Signaling Loop	88	The Pons	135
The "Government Analogy" of Neural Integration in the Postsynaptic Cell	92	Pons: External Features	136
Concluding Thoughts on Neurobiology	93	Pons: Internal Features	137
The Top Ten List	94	The Mesencephalon	140
Chapter 3 Abbreviations	94	Mesencephalon: External Features	143
Study Questions and Activities	95	Mesencephalon: Internal Features	144
References	96	The Top Ten List	145
CHAPTER 4. Neuroanatomy of the Human Nervous System: Anatomical Nomenclature, Embryology, the Spinal Cord, and the Brainstem	99	Chapter 4 Abbreviations	146
<i>Richard D. Andreatta</i>		Study Questions and Activities	146
Introduction and Learning Objectives	99	References	146
Getting Around the Nervous System: Anatomical Planes and Orientations	102	CHAPTER 5. Neuroanatomy of the Human Nervous System: Cranial Nerve Systems	149
		<i>Richard D. Andreatta</i>	
		Introduction and Learning Objectives	149
		Organization of the Cranial Nerves and Nuclei in the Brainstem ²	149
		Functional Classifications of the Cranial Nerves	154
		Motor: General Somatic Efferent (GSE)	155
		Motor: Special Visceral Efferent (SVE)	155
		Motor: General Visceral Efferent (GVE)	155
		Sensory: General Somatic Afferent (GSA)	155
		Sensory: General Visceral Afferent (GVA)	155
		Sensory: Special Somatic Afferent (SSA)	155

Sensory: Special Visceral Afferent (SVA)	155	Parietal Lobe: Functional Features	205
Cranial Nerves: Normal and Disordered Functions...	156	The Temporal Lobe: The “Can You Hear Me Now” and “What Am I” Cerebral Region	207
CN I: Olfactory (SVA)	156	Temporal Lobe: Anatomical Features	207
CN II: Optic (SSA)	158	Temporal Lobe: Functional Features	208
CN III: Oculomotor (GSE and GVE).....	159	The Occipital Lobe: The Visual Center of the Cerebrum	209
CN IV: Trochlear (GSE)	161	Occipital Lobe: Anatomical Features	209
CN V: Trigeminal (GSA and SVE).....	162	Occipital Lobe: Functional Features.....	209
CN VI: Abducens (GSE)	165	The Insula: Is It a Lobe or Not?.....	210
CN VII: Facial (SVE, GVE, SVA, GSA)	165	The Cerebral Cortex	211
CN VIII: Auditory-Vestibular (SSA)	167	Anatomical Features of the Cerebral Cortex	212
CN IX: Glossopharyngeal (SVE, GVE, GVA, SVA, GSA)	169	Organization of the Cerebral Cortex:	213
CN X: Vagus (SVE, GVE, GVA, SVA, GSA).....	171	Brodmann’s Areas and Cortical Columns	
CN XI: Spinal Accessory (SVE).....	173	The Cortex Is Arranged to Support Serial and Parallel Processing of Information	218
CN XII: Hypoglossal (GSE)	174	The Cortex Is Organized to Support Cognition ...	221
The Top Ten List	176	Parietal Association Areas Mediate Visual Guidance, Spatial Awareness, and Attention	224
Chapter 5 Abbreviations.....	177	Temporal Association Areas Recognize Complex Objects	225
Study Questions and Activities	177	Phineas Gage and the Iron Spike: An Accidental Study of the Frontal Association Area	225
References	178	The Limbic System (Limbic Association Area): Emotional Center of the Brain	228
CHAPTER 6. Neuroanatomy of the Human Nervous System: The Diencephalon, Cerebrum, and the Cerebral Cortex	179	Hippocampal Formation Is Involved in Spatial Learning and Long-Term Memory	230
<i>Richard D. Andreatta</i>		Hippocampal Formation Anatomy: Hippocampus, Dentate Gyrus, and Subiculum	233
Introduction and Learning Objectives	179	Amygdala Mediates Threat, Anxiety, and Aggressive Behaviors	233
The Diencephalon.....	179	Anterior Cingulate Gyrus: At the Crossroads of Emotion and Cognition	235
The Thalamus: “Gatekeeper” of Ascending Information to the Cerebral Cortex	179	Septal Area: Key Component of CNS’s Reward System	236
The Thalamus Is a Collection of Nuclei With Unique Inputs and Outputs	182	Interhemispheric Connectivity and Cerebral Dominance	237
The Hypothalamus: “CEO” of the Body’s Homeostatic Regulatory Systems	184	The Top Ten List	239
The Hypothalamic-Pituitary-Adrenal Axis (HPA) Operates as a Feedback Control System	186	Chapter 6 Abbreviations.....	241
Hypothalamus Consists of Numerous Nuclei With Unique Operations	186	Study Questions and Activities	242
Hypothalamic Nuclei Participate in a Wide Range of Homeostatic Functions	187	References	242
The Cerebrum: The Center of Our Lives and Who We Are	190	CHAPTER 7. Neuroanatomy of the Human Nervous System: White Matter Tracts, Protective Infrastructure, and the Brain’s Blood Supply	249
The Lobes of the Cerebrum	193	<i>Richard D. Andreatta</i>	
The Frontal Lobe: The Cognitive and Motor Control Center of the Cerebrum	195	Introduction and Learning Objectives.....	249
Frontal Lobe: Anatomical Features	197		
Frontal Lobe: Functional Features	197		
The Parietal Lobe: Multimodal Sensory Center of the Cerebrum	203		
Parietal Lobe: Anatomical Features.....	204		

Connectivity and White Matter Pathways of the CNS	250	Duration: How Long Does the Stimulus Last? ...	304
Association Fibers Interconnect Areas Within a Hemisphere	251	Sensation and Perception Are Actively Regulated by the CNS	305
Commissural Fibers Link Brain Regions Across the Midline	254	The Top Ten List	306
Projection Fibers Shuttle Information to and From the Brain	255	Chapter 8 Abbreviations	306
Protecting the CNS From Harm: The Meninges and the Ventricular System	259	References	307
The Meninges	259	Study Questions and Activities	307
The Ventricular System	262	CHAPTER 9. The Somatosensory System: Touch, Proprioception, Temperature, and Pain	309
The Vascular System of the Brain	266	Richard D. Andreatta	
Neurovascular Complex Is Divided Into Arterial and Venous Systems	266	Introduction and Learning Objectives	309
Anterior Arterial System	266	The Peripheral Somatosensory Apparatus: Sensory Receptors and the Primary Afferent	310
Posterior Arterial System	271	Cutaneous Tactile Receptors of the Somatosensory System	310
Venous System Sinuses Drain Deoxygenated Blood Back to the Heart	272	Proprioception Sense Is Mediated by Sensory Endings in the Musculoskeletal System	316
Vascular Pathology Can Arise From Three General Situations	275	Temperature Reception Depends on the Expression of Different Types of Ion Channels	318
Aneurysms and Hemorrhagic Stroke	275	Nociception and the Perceptual Response of Pain	319
Ischemic Events	276	Axon Features of the Primary Afferent That Transmits Inputs Centrally	321
Arteriovenous Malformations	278	Dermatomes and the Trigeminal Innervation Zones	322
The Top Ten List	281	Central Somatosensory Pathways	322
Chapter 7 Abbreviations	282	Dorsal Column–Medial Lemniscal System: Touch and Proprioception From the Body	324
Study Questions and Activities	282	Anterolateral System: Noxious and Temperature Sensation	328
References	283	Trigeminal System Manages All Forms of Somatosensation From the Face and Head	335
SECTION 2. Sensory Systems		The Somatosensory Cortex	338
CHAPTER 8. Basic Principles of Sensation and Perception	287	Structural and Functional Features of the Somatosensory Cortex	338
Richard D. Andreatta		S1 Possesses Four Complete Cortical Body Representations	342
Introduction and Learning Objectives	287	Speech-Related Activity of S1	343
Sensation Versus Perception	288	Outputs From the Somatosensory Cortical Areas	344
Nervous Systems Are Far From Ideal to Sense and Perceive	289	Posterior Parietal Lobe Receives Inputs From Primary and Second Somatosensory Areas	344
Perception Requires Filtering, Selection, Inference, and Prediction	289	Neuroplasticity: Changes to the Structure and Function of the Brain	346
Sensations Are Processed by Sensory Systems	291	Somatosensory Cortex Receives Diffuse Projections From the Thalamus	347
Quantifying Sensation and Perception	292	S1 Plasticity as a Function of Enriched Experiences	350
All Sensory Events Possess Four Basic Attributes Related to Perception	294		
Modality: What Is the Stimulus?	294		
Location: Where Is the Stimulus?	297		
Intensity: How Strong Is the Stimulus?	302		

The Timing of Sensory Inputs Are Critical	350	The Nature of Light in Our Environment	394
Factors in Changing Cortical Representations		The Peripheral Visual Apparatus: Anatomical	395
Implication of the Neuroplasticity Literature	354	Overview of the Eye	
to Rehabilitation		Gross Anatomy of the Anterior Eye	395
The Top Ten List	354	Gross Anatomy of the Posterior Eye	397
Chapter 9 Abbreviations	356	Visual Fields	398
Study Questions and Activities	356	The Retina	400
References	357	Of Rods and Cones: Light Transduction	402
		in the Retina	
CHAPTER 10. Auditory-Vestibular System:	361	Rods Mediate Vision During Dim and	403
Inner Ear Transduction Mechanisms for		Nighttime Lighting	
Sound and Balance		Cones Mediate Spatial Acuity and Color	405
<i>Richard D. Andreatta</i>		Vision in Bright Light Conditions	
Introduction and Learning Objectives	361	Phototransduction Mechanism	407
A Quick Summary of Acoustic Transduction in	362	Photoreceptors Differentially Activate	409
the Outer and Middle Ear		ON- or OFF-Bipolar Cells	
The Inner Ear and the Cochlea	362	Signal Integration and Convergence Through	413
Basilar Membrane Is a Frequency Analyzer	365	the Retinal Layers	
Organ of Corti Is the Chief Site for	367	Retinal Ganglion Cells Form the Beginning of	414
Transduction of Auditory Inputs		Different Visual Processing Streams	
Hair Cell Structural and Functional Features	369	The Central Visual Pathway	416
Stereocilia Are Key Elements for Signal	371	Retinal Ganglion Cell Axons Become the	416
Transduction in the Hair Cell		Fibers of the Optic Nerve, Chiasm, and Tract	
Mechanotransduction Mechanism for Acoustic	372	Optic Tract Neurons Project Principally to the	417
Signals in the Cochlea		Lateral Geniculate Nucleus	
Stereocilia Shearing and Hair Cell	373	The Primary Visual Cortex	418
Receptor Activation		Dorsal and Ventral Visual Streams	422
Auditory Nerve Transmits HC Receptor	375	The Dorsal Visual Processing Stream	425
Potential Changes to the Cochlear Nuclei		The Ventral Visual Processing Stream	425
Auditory Nerve Firing Encodes Acoustic	377	Visual Field and Pathway Deficits	426
Intensity and Frequency		Noncortical Visual System Projections	428
If the IHC Is the True Sensory Receptor,	379	From the Retina	
Why Do OHCs Exist?		The Top Ten List	431
The Vestibular System	380	Chapter 11 Abbreviations	432
Otolith Organs Transduce Linear Motion	381	Study Questions and Activities	432
Semicircular Canals Measure Angular	383	References	433
Acceleration			
Central Vestibular Pathway	386	CHAPTER 12. The Chemical Senses:	435
Vestibulo-Ocular Response Is Critical for	387	Olfactory and Gustatory Systems,	
Keeping Your Eyes on the Target		and the Neural Substrate of Swallowing	
The Top Ten List	389	<i>Richard D. Andreatta and Nicole M. Etter</i>	
Chapter 10 Abbreviations	390	Introduction and Learning Objectives	435
Study Questions and Activities	390	Olfactory System: An Overview	436
References	391	Olfactory Receptors and the Transduction	438
		of Odorants	
CHAPTER 11. The Visual System	393	ORN Cilia Are Susceptible to	439
<i>Richard D. Andreatta</i>		Environmental Pollutants	
Introduction and Learning Objectives	393		

Odorant Transduction Requires G-Coupled Receptors	440
Odorants Are Detected by Different Combinations of ORN Receptors	442
Olfactory Bulb Consists of Glomeruli	443
Olfactory Bulb Projection Neurons Target the Olfactory Cortex	444
Gustatory System: An Overview	445
Gustatory Receptors and Transduction	446
Distribution of Taste Sensitivity Across the Surface of the Tongue	447
Taste Buds Consist of Collections of Taste Receptor Cells	448
Tastant Transduction Process	449
Salty and Sour Tastants Are Transduced by Ion Channels	450
Sweet, Bitter, and Umami Transduction Uses G-Coupled Protein Receptors	451
Central Gustatory Pathway	452
Central Representation of Taste	453
Dysfunction in the Chemical Senses	454
Chemosensory Changes Associated With Typical Aging	455
Chemosensory Changes Associated With Surgical Intervention	456
Chemosensory Changes Associated With Injury or Disease	456
The Neural Substrate of Normal Feeding and Swallowing	457
The Aerodigestive Tract Supports Different Modes of Behavior	458
Brief Overview of the Process for Feeding and Swallowing	458
Oral Preparatory and Oral Transport Phases of Swallowing	459
Pharyngeal and Esophageal Phases of Swallowing	459
Neural Elements Participating in the Process of Swallowing	459
Olfactory Nerve Contribution	463
Trigeminal Nerve Contribution	463
Facial Nerve Contribution	463
Glossopharyngeal Nerve Contribution	464
Vagus Nerve Contribution	464
Hypoglossal Nerve Contribution	465
Spinal Nerve Contribution	465
Brainstem Respiratory Centers Are Voluntarily Modulated During Swallowing	465

Cortical and Subcortical Control of Swallowing	465
Control and Function of the Swallowing Central Pattern Generator	467
The Top Ten List	468
Chapter 12 Abbreviations	469
Study Questions and Activities	470
References	471

SECTION 3. Motor Systems

CHAPTER 13. Muscle Tissue: Structure, Mechanisms of Contraction, and the Motor Unit

Richard D. Andreatta and Timothy Butterfield

Introduction and Learning Objectives	475
Types of Muscle Tissue	476
Hierarchical Organization of Skeletal Muscle Tissue: From Bundle to Fiber	477
The Muscle Fiber (Cell)	479
Internal Structure of the Muscle Fiber	479
Organization and Structure of the Myofibril	481
Myofibrils Are Serial Collections of Sarcomeres	481
Molecular Subcomponents of the Sarcomere	482
Structure and Function of Myosin	482
The Function of Actin and Accessory Proteins in the Sarcomere	484
Titin: A Giant Among Proteins	485
Neuromuscular Junction Mediates the Neural Signal That Starts Muscle Contraction	485
Contraction Physiology: Excitation-Coupling in the Muscle Fiber	488
Contraction Physiology: Cross-Bridge Formation	489
Length-Tension Relationship of Muscle Tissue	492
Investigating the Contraction Properties of Muscle Tissue	494
Muscle Forces Increase With Firing Rate of the Lower Motoneuron	495
Skeletal Muscle Fiber Types	496
The Motor Unit	499
Size Principle of Motor Unit Recruitment	502
Regulation of Skeletal Muscle Contraction: Alpha-Gamma Coactivation	504
The Top Ten List	508
Chapter 13 Abbreviations	509
Study Questions and Activities	510
References	510

CHAPTER 14. Motor Control Systems of the CNS	513
<i>Richard D. Andreatta</i>	
Introduction and Learning Objectives	513
Neuromotor Control Elements of the CNS: Direct Versus Indirect Systems	514
Descending Tracts of the Direct Motor Control System	515
Descending Motor Pathways From the Cerebrum: Corticospinal and Corticobulbar Tracts	515
Anatomical Course of the Corticospinal and Corticobulbar Pathways	519
Corticospinal Tract: Course and Function	519
Corticobulbar Tract: Course and Function	520
The Curious Case of UMN Versus LMN Facial Palsy	522
Descending Motor Pathways Originating From the Brainstem	524
Rubrospinal Tract	524
Vestibulospinal Tract	525
Reticulospinal Tract	525
Tectospinal Tract	527
Cerebral Motor Area Underlying Voluntary Control	527
Organization and Functional Mapping of M1	527
Discovery of the Inner Workings of M1	531
Different Neuron Firing Patterns in M1	534
M1 Uses Population Codes to Generate Higher-Order Performance Features of an Action	535
Sensory Inputs to M1 Provide Real-Time Information About the Body's Current State	536
Developing a Broader Understanding of Action and Behavioral Performance	537
The Premotor Cortex	537
PMA Activity Is Strongly Associated With Upper Limb and Hand Action	538
Supplementary Motor Area Activity Is a Necessary Element for Speech Motor Control	541
The Cingulate Motor Map Links Action to Emotion	542
Neuroplasticity in Motor Maps of the Cortex	542
Deficits in Motor Control Can Result From Damage to Upper or Lower Motoneurons	544
Indirect Motor Control Systems	546
Basal Ganglia Is a Selector of Movement	546
The Caudate and Putamen and Their Connections	549
Globus Pallidus and Its Connections	550

Subthalamic Nucleus and Its Connections	550
Substantia Nigra and Its Connections	550
Schematic Organization and Functional Overview of the BG Nuclei	551
The Direct and Indirect Pathways of the Basal Ganglia	551
Direct Pathway Operation in the BG	552
Indirect Pathway Operation in the BG	552
Role of the SNpc in the BG	552
Lesions to the Basal Ganglia Can Produce Hypo- or Hyperkinetic Deficits	553
Hypokinetic Disorders of the BG Are Related to Indirect Pathway Influence	554
Hyperkinetic Disorders of the BG Are Related to Direct Pathway Overactivity	555
Complexity of Basal Ganglia Interconnections Complicates the Simple Correlation Between Structure, Lesion, and Behavioral Effects	557
Cerebellum Operates to Coordinate and Refine Movements	558
External and Internal Anatomical Features of the Cerebellum	561
Functional Divisions of the Cerebellum and Their Input/Output Pathways	561
Functional Cerebellar Areas Form Processing Circuits	564
Vestibulocerebellar Circuit	565
Spinocerebellar Circuit	565
Cerebrocerebellar Circuit	567
Consequences of Cerebellar Lesion Reveal the Operation of the System	568
The Autonomic Nervous System Is the Motor Control System for Homeostasis	570
Pathway Organization of the Sympathetic System	571
Pathway Organization of the Parasympathetic System	573
The Top Ten List	574
Chapter 14 Abbreviations	575
Study Questions and Activities	576
References	577
CHAPTER 15. Introduction to Motor Learning and Control Principles of Behavior	581
<i>Patrick O. McKeon and Richard D. Andreatta</i>	
Introduction and Learning Objectives	581
The Understanding of Motor Control Began With an Idea	582

What Exactly Is Motor Control?	585	Afferent Pathways	624
From Perception to Action	586	Subcortical Structures Involved in Vocalization	624
Foundations of Motor Control Theory	586	Reticular Formation	625
Two Systems of Motor Control: Open-Loop	587	Periaqueductal Gray Matter	625
Systems		Thalamus (Ventrobasal Complex)	625
Two Systems of Motor Control: Closed-Loop	588	Basal Ganglia	626
Systems		Cerebellum	627
